

Which of the following is the pressure correction factor formula?

Select one:

a.

$PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

b.

$PCF = \frac{\text{Meter Pressure} \times \text{Absolute Pressure}}{\text{Sea Level Pressure}}$   $PCF = \frac{\text{Meter Pressure} \times \text{Absolute Pressure}}{\text{Sea Level Pressure}}$

c.

$PCF = \frac{\text{Meter Pressure} \times \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$   $PCF = \frac{\text{Meter Pressure} \times \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$

d.

$PCF = \frac{\text{Meter Pressure} + \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$

Feedback

Your answer is correct.

The correct answer is:  $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

Question text

Which of the following is the temperature correction factor formula?

Select one:

a.

$TCF = \frac{\text{Gas Temp} + 460}{\text{Standard Temp} + 460}$   $TCF = \frac{\text{Gas Temp} + 460}{\text{Standard Temp} + 460}$

b.

$TCF = \frac{\text{Standard Temp} + 460}{\text{Standard Pressure} + 14.73}$   $TCF = \frac{\text{Standard Temp} + 460}{\text{Standard Pressure} + 14.73}$

c.

$TCF = \frac{\text{Standard Pressure} + 14.73}{\text{Standard Temp} + 460}$   $TCF = \frac{\text{Standard Pressure} + 14.73}{\text{Standard Temp} + 460}$

d.

$TCF = \frac{\text{Standard Temp} + 460}{\text{Gas Temp} + 460}$   $TCF = \frac{\text{Standard Temp} + 460}{\text{Gas Temp} + 460}$

Feedback

Your answer is correct.

The correct answer is:  $TCF = \frac{\text{Standard Temp} + 460}{\text{Gas Temp} + 460}$   $TCF = \frac{\text{Standard Temp} + 460}{\text{Gas Temp} + 460}$

Question text

Simply stated, Boyle's Law says that if the pressure exerted upon a gas increases, its volume will Answer .

Feedback

The correct answer is: decrease

Question text

Simply stated, Charles' Law says that if the temperature exerted upon a gas increases, its volume will Answer .

Feedback

The correct answer is: increase

Question text

Which type of meter has the correction factor stamped on a brass tag attached to the meter? Answer compensat

Feedback

The correct answer is: Pressure Factor Measurement

Question text

Clock the input using the following information:

- Test Dial = 5 Ft.3Ft.3
- Time for One Revolution = 15 seconds
- Gas = Natural
- Local Atmospheric Pressure = 14.28 Psi
- Meter Pressure = 10 Psi

Input = Answer 1597200 Btuh

Feedback

input = 3,600sec.hr.15sec.rev.x5ft.3rev.x(10Psig+14.28Psi14.73Psia)x1,000Btuft.33,600sec.hr.15sec.rev.x5ft.3rev.x(10Psig+14.28Psi14.73Psia)x1,000Btuft.3

The correct answer is: 1977600

Question 7

Question text

Determine the input to the appliance if:

- Seconds per revolution = 17
- Gas temperature = 22°F
- Test dial = 5 Ft.3Ft.3
- Gas = Natural
- Local Atmospheric Pressure = 14.56 Psi
- Meter Pressure = 20 Psi
- Meter not temperature compensated

Input = Answer 2475720 Btuh

Feedback

Input

= 3,600sec.hr.17sec.rev.x5ft.3hr.x(20Psig+14.56Psi14.73Psia)x(60F+46022F+460)x1,000Btuft.33,600sec.hr.17sec.rev.x5ft.3hr.x(20Psig+14.56Psi14.73Psia)x(60F+46022F+460)x1,000Btuft.3

The correct answer is: 2680236

Question text

Given a closed container in which there is 16 cubic feet of air at 35 Psig, what will the volume of air be if water is forced into the container until the pressure becomes 105 Psig?

V2V2 = Answer ft.3ft.3

Feedback

V2=V1P1P2V2=V1P1P2

V2=16ft.3x(35Psig+14.73psi)(105psig+14.73psi)V2=16ft.3x(35Psig+14.73psi)(105psig+14.73psi)

The correct answer is: 6.65

Question text

What will the volume be if the 920 cubic inches of gas is cooled from 16°C to -7°C ? (to 2 decimals)

848.49

V2V2 = Answer in.3in.3

Feedback

$$V2=V1T2T1V2=V1T2T1$$

$$V2=920\text{in.3}\times(-7^{\circ}\text{C}+273)(16^{\circ}\text{C}+273)V2=920\text{in.3}\times(-7^{\circ}\text{C}+273)(16^{\circ}\text{C}+273)$$

The correct answer is: 846.78

Question text

If 310 cubic feet of oxygen is under a pressure of 50 Psig, to what gauge pressure must the gas be compressed so that it fits into a 15 cubic foot cylinder? (to 2 decimals)

4

P2P2 = Answer psigpsig

Feedback

$$P2=V1P1V2P2=V1P1V2$$

$$P2=310\text{ft.3}\times(50\text{psig}+14.73\text{psi})15\text{ft.3}P2=310\text{ft.3}\times(50\text{psig}+14.73\text{psi})15\text{ft.3}$$

$$P2=1,337.75\text{psia}-14.73\text{psi}P2=1,337.75\text{psia}-14.73\text{psi}$$

The correct answer is: 1323.02

Question text

An 8 cubic foot air chamber at 40 Psig is released into the atmosphere. What volume will the released air have? (to 2 decimals)

29.77

V2V2 Answer ft.3ft.3

Feedback

$$V2=V1P1P2V2=V1P1P2$$

$$V2=8\text{ft.3}\times(40\text{psig}+14.73\text{psi})14.73\text{Psia}V2=8\text{ft.3}\times(40\text{psig}+14.73\text{psi})14.73\text{Psia}$$

The correct answer is: 29.72

Question text

A gas measures 920 cubic inches at 60°F. What is its volume at 93°F?

865.09

V2V2 = Answer in.3in.3

Feedback

$$V2=V1T2T1V2=V1T2T1$$

$$V2=920\text{in.3}\times(93\text{F}+460)(60\text{F}+460)V2=920\text{in.3}\times(93\text{F}+460)(60\text{F}+460)$$

The correct answer is: 978.38

Question text

Which of the following is the combined gas law formula?

Select one:

a.

$$V1T1P1=V2T2P2V1T1P1=V2T2P2$$

b.

$$V1P1T1=V2P2T2V1P1T1=V2P2T2$$

c.

$$V_1 P_1 T_1 = V_2 P_2 T_2$$

d.

$$T_1 P_1 V_1 = T_2 P_2 V_2$$

**Feedback**

Your answer is incorrect.

The correct answer is:  $V_1 P_1 T_1 = V_2 P_2 T_2$

**Question text**

All gases expand the same amount when heated one degree.

Select one:

True

False

**Feedback**

The correct answer is 'True'.

**Question text**

The test dials are timed on a gas meter that is recording a flow rate of gas at pressures more than 1/2 Psi (3.45 kPa). If no allowance is made for the compression of the gas because of the pressure, the volume of flow indicated by the test dials will:

Select one:

a.

indicate the exact Btu input to the combustion chamber

b.

indicate the unit is overfired

c.

be the volume of fuel gas expressed in SCFH entering the combustion chamber

d.

indicate the unit is underfired

**Feedback**

Your answer is incorrect.

The correct answer is: indicate the unit is underfired

**Question text**

The correction factor of 1.679 would be used for a system operating at:

Select one:

a.

5 psig (34 kPa)

b.

10 psig (70 kPa)

c.

20 psig (140 kPa)

d.

2 psig (14 kPa)

#### Feedback

Your answer is incorrect.

$PCF = \text{Meter Pressure} + \text{Local Atmospheric Pressure} - \text{Standard Pressure}$   
 $PCF = \text{Meter Pressure} + \text{Local Atmospheric Pressure} - \text{Standard Pressure}$   
 $\text{Meter Pressure} = PCF \times \text{Standard Pressure} - \text{Local Atmospheric Pressure}$   
 $\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$   
 $\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$   
 $\text{Meter Pressure} = 10 \text{ psig}$   
 $\text{Meter Pressure} = 10 \text{ psig}$

The correct answer is: 10 psig (70 kPa)

#### Question 17

#### Question text

calculate the input to an appliance by using the following information:

- Local atmospheric pressure = 14.60 Psi
- Gas service line pressure = 60 Psig
- Gas pressure through the meter = 10 Psig
- House line pressure = 2 Psig
- Appliance manifold pressure = 5 inches water column
- Test dial = 0.05 m<sup>3</sup>m<sup>3</sup>

Test dial completes one revolution in 1 minute. Calorific value of gas = 1,000 Btu/Ft.3)(10.35)(kW/m<sup>3</sup>Btu/Ft.3)(10.35)(kW/m<sup>3</sup> ). The correct input is closest to which one of the following?

Select one:

a.

177,000 Btu/h (51.8 kW)

b.

536,000 Btu/h (156.9 kW)

c.

300,000 Btu/h (87.9 kW)

d.

106,000 Btu/h (31 kW)

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.hr} \times 60 \text{ sec.rev.} \times 0.05 \text{ m}^3 \text{ rev.} \times (10 \text{ psig} + 14.6 \text{ psi} - 14.73 \text{ psia}) \times 35,310 \text{ Btu/m}^3 = 176,903 \text{ Btu/h}$   
 $3,600 \text{ sec.hr} \times 60 \text{ sec.rev.} \times 0.05 \text{ m}^3 \text{ rev.} \times (10 \text{ psig} + 14.6 \text{ psi} - 14.73 \text{ psia}) \times 35,310 \text{ Btu/m}^3 = 176,903 \text{ Btu/h}$

The correct answer is: 177,000 Btu/h (51.8 kW)

#### Question text

Calculate the clocked input to the following boiler. The boiler has a rated input of 1,000,000 Btu/h (292.2 kW). it has four burners and operates at a manifold pressure of 7 inches water column (1.74 kPa). The fuel is natural gas with a calorific value of 1,050 Btu/Ft.3Btu/Ft.3 ( 10.84 kW/m3kW/m3 ). The building is at sea level (14.73 Psi) and is supplied with 5 Psig (34 kPa) at the meter. One revolution of the 0.1 m3m3 test dial takes 26 seconds. The clocked input of the boiler is closest to which one of the following?

Select one:

☐

a.

520,000 Btu/h (152 kW)

☐

b.

688,000 Btu/h (201 kW)

☐

c.

490,000 Btu/h (143 kW)

☐

d.

750,000 Btu/h (220 kW)

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times \frac{1 \text{ hr.}}{3600 \text{ sec.}} \times \frac{1 \text{ rev.}}{26 \text{ sec.}} \times 0.1 \text{ m}^3 \times (5 \text{ psig} + 14.73 \text{ psi}) \times 1,050 \text{ Btu/Ft.}^3 = 687,380 \text{ Btu/h}$

The correct answer is: 688,000 Btu/h (201 kW)

#### Question text

Calculate the input to a burner that is fired on a 50% butane-air mixture if it takes 48 seconds for the 2 ft.3ft.3 test dial to complete one revolution. The gas meter has an operating pressure of 5 Psig:

Select one:

☐

a.

240,000 Btu/h

☐

b.

480,000 Btu/h

☐

c.

643,000 Btu/h

☐

d.

321,000 Btu/h

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times \frac{1 \text{ hr.}}{3600 \text{ sec.}} \times \frac{1 \text{ rev.}}{48 \text{ sec.}} \times 2 \text{ ft.}^3 \times (5 \text{ psig} + 14.73 \text{ psi}) \times 1,000 \text{ Btu/Ft.}^3 = 321,360 \text{ Btu/h}$

The correct answer is: 321,000 Btu/h

#### Question text

Determine the input to a appliance under the following conditions (choose the closest answer):

- Service pressure = 60 Psig
- Local atmospheric pressure = 13.38 Psi
- Seconds/revolution = 18
- Meter pressure = 5 psig
- manifold pressure = 7 inches water column
- Test dial = 0.05 m<sup>3</sup>/rev.m<sup>3</sup>/rev.
- Building line pressure = 2 Psig
- Truck in the driveway = Green
- Weather = Partly Cloudy
- Gas = 1,050 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>

Select one:

a.  
496,000 Btuh

b.  
463,000 Btuh

c.  
420,000 Btuh

d.  
131,000 Btuh

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times 18 \text{ sec.} \times 0.05 \text{ m}^3 \times (5 \text{ Psig} + 13.38 \text{ Psi} + 14.73 \text{ Psia}) \times 35.31 \text{ ft}^3 \times 1,050 \text{ Btu} = 462,702 \text{ Btuh}$   
 $3,600 \text{ sec.} \times 18 \text{ sec.} \times 0.05 \text{ m}^3 \times (5 \text{ Psig} + 13.38 \text{ Psi} + 14.73 \text{ Psia}) \times 35.31 \text{ ft}^3 \times 1,050 \text{ Btu} = 462,702 \text{ Btuh}$

The correct answer is: 463,000 Btuh

#### Question text

Calculate the input (to the closest answer) using the following information:

- Service Pressure = 60 Psig
- Meter pressure = 5 Psig
- Manifold pressure = 3.5 inches water column
- Test dial size = (5 cubic ft )
- Seconds/revolution = 20
- Calorific value = 1,000 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>

Select one:

a.  
1,205,000 Btuh

b.  
4,566,000 Btuh

c.  
6,300,000 Btuh

d.  
900,000 Btuh

**Feedback**

Your answer is incorrect.

$3,600 \text{ sec.} \times \text{hr.} \times 20 \text{ sec.} \times \text{rev.} \times 5 \text{ ft.} \times 3 \text{ rev.} \times (5 \text{ Psi} + 14.73 \text{ Psi}) \times 14.73 \text{ Psi} \times 1,000 \text{ Btu} \times 3 = 1,205,100 \text{ Btu}$   
 $3,600 \text{ sec.} \times \text{hr.} \times 20 \text{ sec.} \times \text{rev.} \times 5 \text{ ft.} \times 3 \text{ rev.} \times (5 \text{ Psi} + 14.73 \text{ Psi}) \times 14.73 \text{ Psi} \times 1,000 \text{ Btu} \times 3 = 1,205,100 \text{ Btu}$

The correct answer is: 1,205,000 Btuh

**Question text**

An appliance is clocked on a 2 Psi meter set without correcting for the pressure. The result will be:

Select one:

a.  
the appliance clocked input will be correct

b.  
there is no need to clock any appliance if 2 Psi gas is used

c.  
the appliance will appear to be overfired

d.  
the appliance will appear to be underfired

**Feedback**

Your answer is incorrect.

The correct answer is: the appliance will appear to be underfired

How much Methane does Natural gas contain as a percentage ( % ) ?

Select one:

a.  
80 to 95 %

b.  
50 to 60%

c.  
60 to 70 %

d.

100%

**Feedback**

Your answer is correct.

The correct answer is: 80 to 95 %

**Question text**

Is natural gas in its pure state a toxic gas? (type yes or no) Answer

no

**Feedback**

The correct answer is: No

**Question text**

For the following questions you can type in the chemical formulas as follows (eg water = H<sub>2</sub>O) do not include spaces in your answers.

**Question text**

The ratio of the weight of a given volume of gas to the weight of an equal volume of air measured at standard temperature and pressure (60°F @ 14.73 Psi or 15°C @ 101.325 kPa). This is a description of...

Select one:

a.

**Relative Heat**

b.

**Weight of a substance compared to the density of Hg**

c.

**Relative Volume**

d.

**Relative Density**

**Feedback**

Your answer is incorrect.

The correct answer is: Relative Density

**Question text**

The total heat energy produced when a given volume of fuel is subjected to combustion.

Select one:

a.

**Specific Heat**

b.

**Calorific Capacity**

c.

**Heating Value**

d.

#### Combustion Capacity

##### Feedback

Your answer is incorrect.

The correct answer is: Heating Value

##### Question text

When one cubic foot of natural gas is burned it will produce Answer  British Thermal Units.

##### Feedback

The correct answer is: 1000

##### Question text

Having any lesser amount of fuel than the lower flammable limit, a mixture would be Answer  and would not burn.

##### Feedback

The correct answer is: lean

##### Question text

Which of the following is used to odourize natural gas?

Select one:

a.

Sulphur

b.

Citric Acid

c.

Onion Oil

d.

Mercaptan

##### Feedback

Your answer is incorrect.

The correct answer is: Mercaptan

##### Question text

Natural gas must be readily detectable when \_\_\_\_\_ of the fuel gas per volume is present.

Select one:

a.

less than 10%

b.

more than 10%

c.

less than 1%

d.

any amount

**Feedback**

Your answer is incorrect.

The correct answer is: less than 1%

**Question text**

At standard atmospheric pressure, 14.73 Psi (101.325 kPa), the boiling point of propane is Answer  . Answer in Fahrenheit as ###F (including the letter "F") .

**Feedback**

-44 F

or

-42 C

The correct answer is: -44F

**Question text**

Fuel gases are usually transported and stored in liquid state rather than as a gas due to the following:

(C3H8) 270 times more fuel can be stored in the same space.

(C4H10) 235 times more fuel can be stored in the same space.

Select one:

True

False

**Feedback**

The correct answer is 'True'.

**Question text**

The limits of flammability of propane gas in air are approximately:

Select one:

a.

2.5% to 9.5%

b.

4.6% to 14%

c.

5% to 15.3%

d.

10% to 45%

**Feedback**

Your answer is correct.

The correct answer is: 2.5% to 9.5%

**Question text**

Identify the limits of flammability for natural gas in air:

Select one:

a.

6% to 12%

b.

14% to 24%

c.

4% to 10%

d.

4% to 14%

**Feedback**

Your answer is correct.

The correct answer is: 4% to 14%

**Question text**

**Natural gas is composed mainly of:**

**Select one:**

**a.**

**propane**

**b.**

**butane**

**c.**

**methane**

**d.**

**carbon dioxide**

**Feedback**

**Your answer is correct.**

**The correct answer is: methane**

**Question text**

**The relative density of propane vapour is approximately:**

**Select one:**

**a.**

**1.5**

**b.**

**0.8**

**c.**

**0.6**

**d.**

**2.0**

**Feedback**

Your answer is correct.

The correct answer is: 1.5

**Question text**

What is the calorific value of Butane gas?

Select one:

a.

1,200Btu/Ft.3(.352kW/Ft.3)1,200Btu/Ft.3(.352kW/Ft.3)

b.

1,050Btu/Ft.3(.308kW/Ft.3)1,050Btu/Ft.3(.308kW/Ft.3)

c.

3,200Btu/Ft.3(.938kW/Ft.3)3,200Btu/Ft.3(.938kW/Ft.3)

d.

2,500Btu/Ft.3(.733kW/Ft.3)2,500Btu/Ft.3(.733kW/Ft.3)

**Feedback**

Your answer is correct.

The correct answer is: 3,200Btu/Ft.3(.938kW/Ft.3)3,200Btu/Ft.3(.938kW/Ft.3)

**Question text**

The heat generated by the complete combustion of a unit of fuel is commonly referred to as its:

Select one:

a.

distillation value

b.

combustion value

c.

flash value

d.

calorific value

**Feedback**

Your answer is correct.

The correct answer is: calorific value

**Question text**

Which of the following gases has the highest calorific value?

Select one:

a.

Natural Gas

b.

Carbon monoxide

c.

Butane

d.

Propane

**Feedback**

Your answer is correct.

The correct answer is: Butane

**Question text**

Natural gas must be preheated to approximately \_\_\_\_\_ °F before it will ignite.

Select one:

a.

3,500

b.

212

c.

1,200

d.

1,000

**Feedback**

Your answer is correct.

The correct answer is: 1,200

**Question text**

The flame temperature of natural gas is approximately \_\_\_\_\_ °F.

Select one:

a.

212

b.

1,000

c.

3,500

d.

1,200

**Feedback**

Your answer is incorrect.

The correct answer is: 3,500

**Question text**

The calorific value (heat value) of natural gas is approximately:

Select one:

a.

1,000Btu/Ft.3(10.35kW/m<sup>3</sup>)1,000Btu/Ft.3(10.35kW/m<sup>3</sup>)

b.

2,500Btu/Ft.3(26kW/m<sup>3</sup>)2,500Btu/Ft.3(26kW/m<sup>3</sup>)

c.

3,200Btu/Ft.3(33kW/m3)3,200Btu/Ft.3(33kW/m3)

d.

500Btu/Ft.3(5.17kW/m3)500Btu/Ft.3(5.17kW/m3)

**Feedback**

Your answer is correct.

The correct answer is: 1,000Btu/Ft.3(10.35kW/m3)1,000Btu/Ft.3(10.35kW/m3)

**Question 28**

**Question text**

The specific gravity of a gas is the:

Select one:

a.

weight of a gas as compared to an equal volume of air

b.

heat in the gas

c.

weight of a gas as compared to an equal volume of water

d.

volume of the gas

**Feedback**

Your answer is incorrect.

The correct answer is: weight of a gas as compared to an equal volume of air

List the chemical formula for Natural Gas. Answer

ch4

**Feedback**

The correct answer is: CH<sub>4</sub>

**Question text**

List the chemical formula for Propane. Answer

c3h8

**Feedback**

The correct answer is: C<sub>3</sub>H<sub>8</sub>

Question text

List the chemical formula for Butane. Answer

Feedback

The correct answer is: C4H10

Question text

List the chemical formula for Carbon monoxide. Answer

Feedback

The correct answer is: CO

Question text

List the chemical formula for Carbon dioxide. Answer

Feedback

The correct answer is: CO2

Question text

List the chemical formula for Methane. Answer

Feedback

The correct answer is: CH4

Question text

List the chemical formula for Oxygen. Answer

Feedback

The correct answer is: O2

Question text

The ratio of the weight of a given volume of gas to the weight of an equal volume of air measured at standard temperature and pressure (60°F @ 14.73 Psi or 15°C @ 101.325 kPa). This is a description of...

Select one:

a.

Relative Heat

b.

Weight of a substance compared to the density of Hg

c.

Relative Volume

d.

Relative Density

**Feedback**

Your answer is incorrect.

The correct answer is: Relative Density

**Question 11**

**Question text**

The total heat energy produced when a given volume of fuel is subjected to combustion.

Select one:

a.

Specific Heat

b.

Calorific Capacity

c.

Heating Value

d.

Combustion Capacity

**Feedback**

Your answer is incorrect.

The correct answer is: Heating Value

**Question text**

When one cubic foot of natural gas is burned it will produce Answer  British Thermal Units.

**Feedback**

The correct answer is: 1000

**Question 13**

Question text

Having any lesser amount of fuel than the lower flammable limit, a mixture would be Answer  
less and would not burn.

Feedback

The correct answer is: lean

Question text

Which of the following is used to odourize natural gas?

Select one:

a.

Sulphur

b.

Citric Acid

c.

Onion Oil

d.

Mercaptan

Feedback

Your answer is incorrect.

The correct answer is: Mercaptan

Question text

Natural gas must be readily detectable when \_\_\_\_\_ of the fuel gas per volume is present.

Select one:

a.

less than 10%

b.

more than 10%

c.

less than 1%

d.

any amount

#### Feedback

Your answer is incorrect.

The correct answer is: less than 1%

#### Question text

At standard atmospheric pressure, 14.73 Psi (101.325 kPa), the boiling point of propane is Answer  . Answer in Fahrenheit as ###F (including the letter "F") .

#### Feedback

-44 F

or

-42 C

The correct answer is: -44F

#### Question text

Fuel gases are usually transported and stored in liquid state rather than as a gas due to the following:

(C3H8) 270 times more fuel can be stored in the same space.

(C4H10) 235 times more fuel can be stored in the same space.

Select one:

True

False

#### Feedback

The correct answer is 'True'.

#### Question text

The limits of flammability of propane gas in air are approximately:

Select one:

a.

2.5% to 9.5%

b.

4.6% to 14%

c.

5% to 15.3%

d.

10% to 45%

#### Feedback

Your answer is correct.

The correct answer is: 2.5% to 9.5%

#### Question text

Identify the limits of flammability for natural gas in air:

Select one:

a.

6% to 12%

b.

14% to 24%

c.

4% to 10%

d.

4% to 14%

### Feedback

Your answer is correct.

The correct answer is: 4% to 14%

### Question text

Natural gas is composed mainly of:

Select one:

☐

a.

propane

☐

b.

butane

☒

c.

methane

☐

d.

carbon dioxide

### Feedback

Your answer is correct.

The correct answer is: methane

### Question text

The relative density of propane vapour is approximately:

Select one:

☒

a.

1.5

☐

b.

0.8

☐

c.

0.6

☐

d.

2.0

#### Feedback

Your answer is correct.

The correct answer is: 1.5

#### Question text

What is the calorific value of Butane gas?

Select one:

☐

a.

1,200Btu/Ft.3(.352kW/Ft.3)1,200Btu/Ft.3(.352kW/Ft.3)

☐

b.

1,050Btu/Ft.3(.308kW/Ft.3)1,050Btu/Ft.3(.308kW/Ft.3)

☒

c.

3,200Btu/Ft.3(.938kW/Ft.3)3,200Btu/Ft.3(.938kW/Ft.3)

☐

d.

2,500Btu/Ft.3(.733kW/Ft.3)2,500Btu/Ft.3(.733kW/Ft.3)

#### Feedback

Your answer is correct.

The correct answer is: 3,200Btu/Ft.3(.938kW/Ft.3)3,200Btu/Ft.3(.938kW/Ft.3)

#### Question text

The heat generated by the complete combustion of a unit of fuel is commonly referred to as its:

Select one:

☐

a.

distillation value

☐

b.

combustion value

☐

c.

flash value

☒

d.

calorific value

#### Feedback

Your answer is correct.

The correct answer is: calorific value

#### Question text

Which of the following gases has the highest calorific value?

Select one:

☐

a.

Natural Gas

☐

b.

Carbon monoxide

☒

c.

Butane

☐

d.

Propane

#### Feedback

Your answer is correct.

The correct answer is: Butane

Question text

Natural gas must be preheated to approximately \_\_\_\_\_ °F before it will ignite.

Select one:

☐

a.

3,500

☐

b.

212

☒

c.

1,200

☐

d.

1,000

Feedback

Your answer is correct.

The correct answer is: 1,200

Question text

The flame temperature of natural gas is approximately \_\_\_\_\_ °F.

Select one:

☐

a.

212

☒

b.

1,000

☐

c.

3,500

d.

1,200

#### Feedback

Your answer is incorrect.

The correct answer is: 3,500

#### Question text

The calorific value (heat value) of natural gas is approximately:

Select one:

a.

1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)

b.

2,500Btu/Ft.<sup>3</sup>(26kW/m<sup>3</sup>)2,500Btu/Ft.<sup>3</sup>(26kW/m<sup>3</sup>)

c.

3,200Btu/Ft.<sup>3</sup>(33kW/m<sup>3</sup>)3,200Btu/Ft.<sup>3</sup>(33kW/m<sup>3</sup>)

d.

500Btu/Ft.<sup>3</sup>(5.17kW/m<sup>3</sup>)500Btu/Ft.<sup>3</sup>(5.17kW/m<sup>3</sup>)

#### Feedback

Your answer is correct.

The correct answer is: 1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)

#### Question text

The specific gravity of a gas is the:

Select one:

a.

weight of a gas as compared to an equal volume of air

b.

heat in the gas

c.

weight of a gas as compared to an equal volume of water

d.

volume of the gas

#### Feedback

Your answer is incorrect.

The correct answer is: weight of a gas as compared to an equal volume of air

The major interruption in fuel supply could stop production and result in what?

Select one:

a.

Minor economic losses

b.

Major economic losses

c.

Not a big deal

d.

Inconvenience

#### Feedback

Your answer is incorrect.

The correct answer is: Major economic losses

Question text

When is it practical to consider Bio-gas as a supplemental fuel source?

Select one:

☐

a.

When supply exceeds demand

☐

b.

When demand exceeds supply

☐

c.

Bio-gas is hazardous and should never be used

☐

d.

It is never practical

Feedback

Your answer is incorrect.

The correct answer is: When demand exceeds supply

Question text

When organic waste degrades what does it produce?

Select one:

☐

a.

Water

☐

b.

Energy

☐

c.

Methane

☐

d.

Carbon Dioxide

**Feedback**

Your answer is incorrect.

The correct answer is: Methane

**Question text**

What is the process of bacteria digesting organic material referred to as?

Select one:

☐

a.

Energetic activity

☐

b.

Aerobic activity

☐

c.

Anaerobic digestion

☐

d.

Process Digestion

**Feedback**

Your answer is incorrect.

The correct answer is: Anaerobic digestion

**Question text**

What is term used to describe separating methane from the bio-gas?

Select one:

☐

a.

Scrubbing

☐

b.

Manufacturing

c.

Sweeping

d.

Bleaching

**Feedback**

Your answer is incorrect.

The correct answer is: Scrubbing

**Question text**

Calculate the calorific value of a propane/air mixture with 65% propane.

Select one:

a.

1 500 Btu/cubic foot

b.

1 235 Btu/cubic foot

c.

1 750 Btu/cubic foot

d.

1 625 Btu/cubic foot

**Feedback**

Your answer is incorrect.

The correct answer is: 1 625 Btu/cubic foot

**Question 7**

**Question text**

Calculate the specific gravity of a propane/air mixture with 65% propane.

Select one:

a.

1.342

b.

1.182

c.

1.338

d.

1.765

#### Feedback

Your answer is incorrect.

$$(65/100 \times 1.52) + (35/100 \times 1) = 1.338$$

The correct answer is: 1.338

Which type of gas meter would be suited for applications requiring a gas pressure rating of 300 or more PSIG?

Select one:

a.

Rotary meter

b.

Diaphragm meter

c.

Turbine meter

d.

All meters can easily handle 300 PSIG or more

**Feedback**

Your answer is incorrect.

The correct answer is: Turbine meter

**Question text**

Which type of gas meter is used mostly in residential markets?

Answer:

**Feedback**

Diaphragm or Bellows

The correct answer is: Diaphragm

**Question text**

Which of the following is not a function of the gas meter ?

Select one:

a.

Measuring input to appliances within building

b.

Measuring Gas consumption

c.

Identifying leaks

d.

Measuring Gas pressure

**Feedback**

Your answer is incorrect.

The correct answer is: Measuring Gas pressure

**Question text**

If no appliances in the building are firing and the gas meter is moving what can be assumed ?

Select one:

a.

The line pressure regulator has been left on

b.

The gas meter is faulty

c.

The service regulator has failed

d.

There is a leak somewhere in the system

#### Feedback

Your answer is incorrect.

The correct answer is: There is a leak somewhere in the system

#### Question text

The main purpose of a gas meter is to:

Select one:

a.

measure and record the gas flow

b.

restrict the flow of gas to the system

c.

prevent excessive gas flow to the system

d.

test the system for leaks

### Feedback

Your answer is correct.

The correct answer is: measure and record the gas flow

### Question text

Bellows-type gas meters are installed on:

Select one:

a.

domestic and commercial systems

b.

domestic system only

c.

industrial and commercial system

d.

industrial systems only

### Feedback

Your answer is correct.

The correct answer is: domestic and commercial systems

### Question text

Diaphragm meters can typically service systems up to a maximum flow capacity of \_\_\_\_\_.

Select one:

a.

15 000 CFH

b.

1000 CFH

c.

5000 CFH

d.

1500 CFH

### Feedback

Your answer is correct.

The correct answer is: 5000 CFH

### Question 8

#### Question text

Test dials on meters can be used to do which of the following.

Select one:

a.

To test for leaks in the system.

b.

To test the meter for proper operation.

c.

To monitor and record flow rate.

d.

To determine the amount of gas consumed over a large period of time.

### Feedback

Your answer is correct.

The correct answer is: To test for leaks in the system.

What are the acceptable range limits when comparing CLOCKED inputs to the manufacturer's RATED inputs ?

Select one:

☐

a.  
+/- 20 %

☒

b.  
10 % under-fired / 0 % over-fired

☐

c.  
10 % over-fired / 0 % under-fired

☐

d.  
0 % over-fired / 0 % over-fired

#### Feedback

Your answer is correct.

The correct answer is: 10 % under-fired / 0 % over-fired

#### Question text

Which of the following is the low pressure clocking formula ?

Select one:

☐

a.  
 $3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \text{clocked input}$

☒

b.  
 $3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \text{rated input}$

☐

c.  
 $\# \text{ sec / rev.} \times \text{test dial volume} \times \text{calorific value} / 3600 \text{ sec / hr}$

☐

d.  
 $3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \# \text{ sec / rev.}$

#### Feedback

Your answer is incorrect.

The correct answer is:  $3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \# \text{ sec / rev.}$

#### Question text

If a natural gas meter @ 7 inches water column pressure is used to clock an appliance and it takes 23 seconds for the 2 cubic foot test dial to make one revolution. What is the clocked input of this appliance if the calorific value of the gas is 1050 Btu's / feet<sup>3</sup> ? (To nearest whole number)

Answer: 328695

#### Feedback

$3600 \text{ sec / hour} \div 23 \text{ sec / rev.} \times 2 \text{ feet}^3 \times 1050 \text{ Btu's}^3 / \text{feet}^3$

The correct answer is: 328696

#### Question text

The testing pressure and duration of the test for gas piping systems after appliances are connected is:

Select one:

☐

a.  
50 psi for 10 minutes

☐

b.  
normal working pressure for 24 hours

☐

c.  
1/2 Psi for 10 minutes

☒

d.  
normal working pressure for 10 minutes

#### Feedback

Your answer is correct.

B149.1 [6.22.3 (b & d)]

The correct answer is: normal working pressure for 10 minutes

#### Question text

A furnace fired on natural gas is clocked at 20 seconds for one revolution of a 0.05 cubic meter test dial. The pressure of the gas in the meter is 7 inches water column (1.74 kPa). Calorific value = 1,000 BtuFt.<sup>3</sup>BtuFt.<sup>3</sup> (10.35 kW/m<sup>3</sup>). The correct input is closest to:

Select one:

☐

a.  
93.15 Btu/h (0.027 kW)

☐

b.  
9,000 Btu/h (2.63 kW)

☐

c.  
320,000 Btu/h (93.6 kW)

☒

d.  
90,000 Btu/h (26.4 kW)

#### Feedback

Your answer is incorrect.

$$3,600 \frac{\text{sec.}}{\text{hr.}} \cdot 20 \frac{\text{sec.}}{\text{rev.}} \times 0.05 \frac{\text{m}^3}{\text{rev.}} = 9 \frac{\text{m}^3}{\text{hr.}} \quad 3,600 \frac{\text{sec.}}{\text{hr.}} \cdot 20 \frac{\text{sec.}}{\text{rev.}} \times 0.05 \frac{\text{m}^3}{\text{rev.}} = 9 \frac{\text{m}^3}{\text{hr.}}$$
$$9 \frac{\text{m}^3}{\text{hr.}} \times 35,310 \frac{\text{Btu}}{\text{m}^3} = 317,790 \frac{\text{Btu}}{\text{hr.}} \quad 9 \frac{\text{m}^3}{\text{hr.}} \times 35,310 \frac{\text{Btu}}{\text{m}^3} = 317,790 \frac{\text{Btu}}{\text{hr.}}$$

The correct answer is: 320,000 Btu/h (93.6 kW)

#### Question text

A 5 cubic foot test dial on a low pressure meter takes 30 seconds to make 1 complete revolution. The correct flow rate is closest to:

Select one:

a.  
600 cubic feet/hour (16.80 m<sup>3</sup>m<sup>3</sup> )

b.  
120 cubic feet/hour (3.36 m<sup>3</sup>m<sup>3</sup> )

c.  
30 cubic feet/hour (0.85 m<sup>3</sup>m<sup>3</sup> )

d.  
750 cubic feet/hour ( 21.24 m<sup>3</sup>m<sup>3</sup> )

#### Feedback

Your answer is correct.

$$3,600 \frac{\text{sec.}}{\text{hr.}} \cdot 30 \frac{\text{sec.}}{\text{rev.}} \times 5 \frac{\text{ft.}^3}{\text{rev.}} = 600 \text{CFH} \quad 3,600 \frac{\text{sec.}}{\text{hr.}} \cdot 30 \frac{\text{sec.}}{\text{rev.}} \times 5 \frac{\text{ft.}^3}{\text{rev.}} = 600 \text{CFH}$$

The correct answer is: 600 cubic feet/hour (16.80 m<sup>3</sup>m<sup>3</sup> )

#### Question text

A low pressure meter set requires 32 seconds for a 0.05 m<sup>3</sup>m<sup>3</sup> test dial to make one revolution. The calorific value of the gas is 1,000 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup> . The closest correct input is:

Select one:

a.  
582,000 Btu/h

b.  
1,986,948 Btu/h

c.

199,000 Btu/h

d.

56,250 Btu/h

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.hr.} \times 0.05 \text{ m}^3 \text{ rev.} = 5.625 \text{ m}^3 \text{ hr.}$   
 $5.625 \text{ m}^3 \text{ hr.} \times 35,310 \text{ Btu/m}^3 = 198,619 \text{ Btu/h}$

The correct answer is: 199,000 Btu/h

#### Question text

A low pressure propane meter with a 1 cubic foot dial takes 25 seconds for a revolution. The correct input is closest to:

Select one:

a.

325,451 Btu/h (95.32 kW)

b.

403,200 Btu/h (118.09 kW)

c.

360,000 Btu/h (105.44 kW)

d.

151,200 btu/h (44.28 kW)

#### Feedback

Your answer is correct.

$3,600 \text{ sec.hr.} \times 1 \text{ ft.}^3 \text{ rev.} = 144 \text{ CFH}$   
 $144 \text{ CFH} \times 2,500 \text{ Btu/ft.}^3 = 360,000 \text{ Btu/h}$

The correct answer is: 360,000 Btu/h (105.44 kW)

#### Question text

A furnace rated at 250,000 Btu/h (73.23 kW) is fired on natural gas. The calorific value = 1,000 Btu/ft.<sup>3</sup> (10.35 kW/m<sup>3</sup>). How long will it take the 5 cubic foot test dial to make one complete revolution on this low pressure meter?

Select one:

a.

180 seconds

b.  
18 seconds

c.  
100 seconds

d.  
72 seconds

#### Feedback

Your answer is incorrect.

$\text{input} = 3,600 \text{ sec.hr.} \times \text{TD} \times \text{C.V.} \times T_{\text{sec.rev.}}$   $\text{input} = 3,600 \text{ sec.hr.} \times \text{TD} \times \text{C.V.} \times T_{\text{sec.rev.}}$

$T_{\text{sec.rev.}} = 3,600 \text{ sec.hr.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 / 3250,000 \text{ Btu h}$   $T_{\text{sec.rev.}} = 3,600 \text{ sec.hr.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 / 3250,000 \text{ Btu h}$

The correct answer is: 72 seconds

#### Question text

Calculate the input for the following natural gas appliance:

- Calorific value of gas = 1,000 Btu/Ft.<sup>3</sup> ( 10.35 kW/m<sup>3</sup> )
- Meter pressure = 7 inches water column (1.74 kPa)
- Manifold pressure = 5 inches water column (1.24 kPa)
- Local atmospheric pressure = 14.68 Psia
- Test dial = 1 Ft.<sup>3</sup>
- One revolution of the test dial takes 31.5 seconds

Select one:

a.  
115,428 Btu/h (33.81 kW)

b.  
114,285 Btu/h (33.47 kW)

c.  
119,999 Btu/h (35.15 kW)

d.  
116,129 Btu/h (34.01 kW)

#### Feedback

Your answer is correct.

$3,600 \text{ sec. rev.} \times 1 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 114,286 \text{ Btu/h}$   
 $3,600 \text{ sec. rev.} \times 1 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 114,286 \text{ Btu/h}$

The correct answer is: 114,285 Btu/h (33.47 kW)

#### Question text

The purpose of clocking a meter by a gas fitter is:

Select one:

☐

a.  
solely used as a gas leak check

☐

b.  
to check how much gas is consumed in a month for billing purposes

☐

c.  
to see how long it takes the test dial to go around

☒

d.  
to determine how much gas an appliance consumes per hour

#### Feedback

Your answer is correct.

The correct answer is: to determine how much gas an appliance consumes per hour

#### Question text

Determine the number of seconds for one revolution of a 2 cubic foot test dial if the input is 302,400 Btu/h, the meter pressure is 7 inches water column and the gas used has a calorific value of 1,050 Btu ft.<sup>3</sup>/Btu ft.<sup>3</sup>.

Select one:

☐

a.  
4 seconds

☒

b.  
25 seconds

☐

c.  
28.5 seconds

☐

d.  
23.8 seconds

#### Feedback

Your answer is correct.

$3,600 \text{ sec.hr.} \times 2 \text{ ft.}^3 \text{ rev.} \times 1,050 \text{ Btu ft.}^3 = 25 \text{ sec.}$   
 $3,600 \text{ sec.hr.} \times 2 \text{ ft.}^3 \text{ rev.} \times 1,050 \text{ Btu ft.}^3 = 25 \text{ sec.}$

The correct answer is: 25 seconds

#### Question text

A furnace fired on propane is clocked at 22 seconds on a 0.5 Ft.<sup>3</sup>Ft.<sup>3</sup> test dial. The meter is low pressure. Its input will be closest to:

Select one:

☐

a.  
2,045,000 Btuh

☐

b.  
82,000 Btuh

☐

c.  
818,000 Btuh

☒

d.  
204,545 Btuh

#### Feedback

Your answer is correct.

$3,600 \text{ sec.hr.} \times 22 \text{ sec. rev.} \times 0.5 \text{ ft.}^3 \text{ rev.} \times 2,500 \text{ Btu ft.}^3 = 204,545 \text{ Btuh}$   
 $3,600 \text{ sec.hr.} \times 22 \text{ sec. rev.} \times 0.5 \text{ ft.}^3 \text{ rev.} \times 2,500 \text{ Btu ft.}^3 = 204,545 \text{ Btuh}$

The correct answer is: 204,545 Btuh

#### Question text

A low pressure meter set measuring natural gas requires 32 seconds for a 1/2 cubic meter test dial to make one revolution. The correct input is closest to:

Select one:

☒

a.  
56.25 kW

☐

b.  
582 kW

☐

c.  
56,250 kW

☐

d.  
582 Btuh

### Feedback

Your answer is incorrect.

$3,600\text{sec.hr.} \times 0.5\text{m}^3\text{rev.} = 56.25\text{m}^3\text{hr.}$   
 $3,600\text{sec.hr.} \times 0.5\text{m}^3\text{rev.} = 56.25\text{m}^3\text{hr.}$   
 $56.25\text{m}^3\text{hr.} \times 10.35\text{kWm}^3 = 582.188\text{kWhr.}$   
 $56.25\text{m}^3\text{hr.} \times 10.35\text{kWm}^3 = 582.188\text{kWhr.}$

The correct answer is: 582 kW

### Question text

After replacing a hot water tank rated at 36,000 Btuh, the gas fitter must clock it. However, the furnace must stay on throughout the clocking procedure. Clocking only the furnace (rated at 120,000 Btuh), the test dial takes 150 seconds for one revolution (5 Ft.3 test dial). With both units firing, the time per revolution drops to 116 seconds. Using natural gas, if the meter is a low-pressure meter, we can conclude that:

Select one:

a.  
the hot water tank is overfired

b.  
both units are underfired

c.  
the installation is acceptable

d.  
the furnace is overfired

### Feedback

Your answer is incorrect.

( Both Appliances

$) 3,600\text{sec.hr.} \times 116\text{sec.rev.} \times 5\text{ft.} \times 1,000\text{Btuft.} = 155,172\text{Btuh}$   
 $3,600\text{sec.hr.} \times 116\text{sec.rev.} \times 5\text{ft.} \times 1,000\text{Btuft.} = 155,172\text{Btuh}$

( Furnace

$) 3,600\text{sec.hr.} \times 150\text{sec.rev.} \times 5\text{ft.} \times 1,000\text{Btuft.} = 120,000\text{Btuh}$   
 $3,600\text{sec.hr.} \times 150\text{sec.rev.} \times 5\text{ft.} \times 1,000\text{Btuft.} = 120,000\text{Btuh}$

(Hot Water

Tank)  $155,172\text{Btuh} - 120,000\text{Btuh} = 35,172\text{Btuh}$   
 $155,172\text{Btuh} - 120,000\text{Btuh} = 35,172\text{Btuh}$

The correct answer is: the installation is acceptable

### Question text

An appliance fired on low pressure natural gas takes 27 seconds for one revolution of a 0.05 m<sup>3</sup>m<sup>3</sup> test dial. Its input will be closest to:

Select one:

- a.  
6.67 kW
- ☐
- b.  
13.24 kW
- ☐
- c.  
235,000 Btuh
- ☐
- d.  
167,000 Btuh

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times 0.05 \text{ m}^3 \text{ rev.} \times 35,310 \text{ Btu/m}^3 = 235,400 \text{ Btuh}$

The correct answer is: 235,000 Btuh

#### Question text

A furnace is certified to operate on propane with an input of 375,000 Btu/h at 10 inches water column. The gas has a calorific value of 2,500 Btu/Ft.<sup>3</sup>. With the furnace operating, the meter is clocked and it takes 30 seconds for the 1 cubic foot test dial to make one complete revolution. From this, you can conclude that the appliance is:

Select one:

- ☐
- a.  
firing at the correct input
- ☒
- b.  
overfired by 20%
- ☐
- c.  
underfired by 20%
- ☐
- d.  
underfired by 80%

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times 1 \text{ ft.}^3 \text{ rev.} \times 2,500 \text{ Btu/ft.}^3 = 300,000 \text{ Btuh}$

Which of the following is the pressure correction factor formula?

Select one:

☒

a.

$PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

☐

b.

$PCF = \frac{\text{Meter Pressure} \times \text{Absolute Pressure Sea Level}}{\text{Pressure}}$   $PCF = \frac{\text{Meter Pressure} \times \text{Absolute Pressure Sea Level}}{\text{Pressure}}$

☐

c.

$PCF = \frac{\text{Meter Pressure} \times \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$   $PCF = \frac{\text{Meter Pressure} \times \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$

☐

d.

$PCF = \frac{\text{Meter Pressure} + \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$

#### Feedback

Your answer is correct.

The correct answer

is:  $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

#### Question text

Which of the following is the temperature correction factor formula?

Select one:

☐

a.

$TCF = \frac{\text{Gas Temp} + 460(273)}{\text{Standard Temp} + 460(273)}$   $TCF = \frac{\text{Gas Temp} + 460(273)}{\text{Standard Temp} + 460(273)}$

☐

b.

$TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Standard Pressure} + 14.73}$   $TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Standard Pressure} + 14.73}$

☐

c.

$TCF = \frac{\text{Standard Pressure} + 14.73}{\text{Standard Temp} + 460(273)}$   $TCF = \frac{\text{Standard Pressure} + 14.73}{\text{Standard Temp} + 460(273)}$

☒

d.

$TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Gas Temp} + 460(273)}$   $TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Gas Temp} + 460(273)}$

#### Feedback

Your answer is correct.

The correct answer

is:  $TCF = \frac{StandardTemp + 460}{GasTemp + 460}$

Question text

Simply stated, Boyle's Law says that if the pressure exerted upon a gas increases, its volume will Answer .

Feedback

The correct answer is: decrease

Flag question

Question text

Simply stated, Charles' Law says that if the temperature exerted upon a gas increases, its volume will Answer .

Feedback

The correct answer is: increase

Question text

Which type of meter has the correction factor stamped on a brass tag attached to the meter? Answer .

Feedback

The correct answer is: Pressure Factor Measurement

Question text

Clock the input using the following information:

- Test Dial = 5 Ft.3Ft.3
- Time for One Revolution = 15 seconds
- Gas = Natural
- Local Atmospheric Pressure = 14.28 Psi
- Meter Pressure = 10 Psi

Input = Answer  Btuh

Feedback

input

$$= 3,600 \frac{\text{sec.}}{\text{hr.}} \cdot 15 \frac{\text{sec.}}{\text{rev.}} \times 5 \text{ ft.}^3 \cdot \text{rev.} \times (10 \text{ Psi} + 14.28 \text{ Psi}) \cdot 14.73 \text{ Psia} \times 1,000 \frac{\text{Btu}}{\text{ft.}^3} \cdot 3,600 \frac{\text{sec.}}{\text{hr.}} \cdot 15 \frac{\text{sec.}}{\text{rev.}} \times 5 \text{ ft.}^3 \cdot \text{rev.} \times (10 \text{ Psi} + 14.28 \text{ Psi}) \cdot 14.73 \text{ Psia} \times 1,000 \frac{\text{Btu}}{\text{ft.}^3}$$

The correct answer is: 1977600

### Question text

Determine the input to the appliance if:

- Seconds per revolution = 17
- Gas temperature = 22°F
- Test dial = 5 Ft.3Ft.3
- Gas = Natural
- Local Atmospheric Pressure = 14.56 Psi
- Meter Pressure = 20 Psi
- Meter not temperature compensated

Input = Answer

2475720

Btuh

### Feedback

Input

$$= 3,600 \text{sec.hr.} \cdot 17 \text{sec.rev.} \times 5 \text{ft.} \cdot 3 \text{hr.} \times (20 \text{Psi} + 14.56 \text{Psi} \cdot 14.73 \text{Psi}) \times (60 \text{F} + 460 \cdot 22 \text{F} + 460) \times 1,000 \text{Btuft.} \cdot 3,600 \text{sec.hr.} \cdot 17 \text{sec.r ev.} \times 5 \text{ft.} \cdot 3 \text{hr.} \times (20 \text{Psi} + 14.56 \text{Psi} \cdot 14.73 \text{Psi}) \times (60 \text{F} + 460 \cdot 22 \text{F} + 460) \times 1,000 \text{Btuft.} \cdot 3$$

The correct answer is: 2680236

### Question text

Given a closed container in which there is 16 cubic feet of air at 35 Psig, what will the volume of air be if water is forced into the container until the pressure becomes 105 Psig?

V<sub>2</sub>V<sub>2</sub> = Answer

ft.3ft.3

### Feedback

$$V_2 = V_1 P_1 P_2 \quad V_2 = V_1 P_1 P_2$$

$$V_2 = 16 \text{ft.} \cdot 3 \times (35 \text{Psig} + 14.73 \text{psi}) (105 \text{psig} + 14.73 \text{psi}) \quad V_2 = 16 \text{ft.} \cdot 3 \times (35 \text{Psig} + 14.73 \text{psi}) (105 \text{psig} + 14.73 \text{psi})$$

The correct answer is: 6.65

### Question text

What will the volume be if the 920 cubic inches of gas is cooled from 16°C to -7°C ? (to 2 decimals)

V<sub>2</sub>V<sub>2</sub> = Answer

848.49

in.3in.3

### Feedback

$$V_2 = V_1 T_2 T_1 \quad V_2 = V_1 T_2 T_1$$

$$V_2 = 920 \text{in.} \cdot 3 \times (-7^\circ \text{C} + 273) (16^\circ \text{C} + 273) \quad V_2 = 920 \text{in.} \cdot 3 \times (-7^\circ \text{C} + 273) (16^\circ \text{C} + 273)$$

The correct answer is: 846.78

### Question text

If 310 cubic feet of oxygen is under a pressure of 50 Psig, to what gauge pressure must the gas be compressed so that it fits into a 15 cubic foot cylinder? (to 2 decimals)

P<sub>2</sub>P<sub>2</sub> = Answer

4

psigpsig

### Feedback

$$P_2 = V_1 P_1 V_2 P_2 = V_1 P_1 V_2$$

$$P_2 = 310 \text{ ft.}^3 \times (50 \text{ psig} + 14.73 \text{ psi}) / 15 \text{ ft.}^3 P_2 = 310 \text{ ft.}^3 \times (50 \text{ psig} + 14.73 \text{ psi}) / 15 \text{ ft.}^3$$

$$P_2 = 1,337.75 \text{ psia} - 14.73 \text{ psi} P_2 = 1,337.75 \text{ psia} - 14.73 \text{ psi}$$

The correct answer is: 1323.02

### Question text

An 8 cubic foot air chamber at 40 Psig is released into the atmosphere. What volume will the released air have? (to 2 decimals)

V<sub>2</sub>V<sub>2</sub> Answer  ft.<sup>3</sup>ft.<sup>3</sup>

### Feedback

$$V_2 = V_1 P_1 P_2 V_2 = V_1 P_1 P_2$$

$$V_2 = 8 \text{ ft.}^3 \times (40 \text{ psig} + 14.73 \text{ psi}) / 14.73 \text{ Psia} V_2 = 8 \text{ ft.}^3 \times (40 \text{ psig} + 14.73 \text{ psi}) / 14.73 \text{ Psia}$$

The correct answer is: 29.72

### Question text

A gas measures 920 cubic inches at 60°F. What is its volume at 93°F?

V<sub>2</sub>V<sub>2</sub> = Answer  in.<sup>3</sup>in.<sup>3</sup>

### Feedback

$$V_2 = V_1 T_2 T_1 V_2 = V_1 T_2 T_1$$

$$V_2 = 920 \text{ in.}^3 \times (93 \text{ F} + 460) / (60 \text{ F} + 460) V_2 = 920 \text{ in.}^3 \times (93 \text{ F} + 460) / (60 \text{ F} + 460)$$

The correct answer is: 978.38

### Question text

Which of the following is the combined gas law formula?

Select one:

a.

$$V_1 T_1 P_1 = V_2 T_2 P_2 V_1 T_1 P_1 = V_2 T_2 P_2$$

b.

$$V_1 P_1 T_1 = V_2 P_2 T_2 V_1 P_1 T_1 = V_2 P_2 T_2$$

c.

$$V_1 P_1 T_1 = V_2 P_2 T_2 V_1 P_1 T_1 = V_2 P_2 T_2$$

d.

$$T_1 P_1 V_1 = T_2 P_2 V_2 T_1 P_1 V_1 = T_2 P_2 V_2$$

### Feedback

Your answer is incorrect.

The correct answer is:  $V_1P_1T_1=V_2P_2T_2$

#### Question text

All gases expand the same amount when heated one degree.

Select one:

- ☐ True
- ☒ False

#### Feedback

The correct answer is 'True'.

#### Question text

The test dials are timed on a gas meter that is recording a flow rate of gas at pressures more than 1/2 Psi (3.45 kPa). If no allowance is made for the compression of the gas because of the pressure, the volume of flow indicated by the test dials will:

Select one:

- ☒
  - a. indicate the exact Btu input to the combustion chamber
- ☐
  - b. indicate the unit is overfired
- ☐
  - c. be the volume of fuel gas expressed in SCFH entering the combustion chamber
- ☐
  - d. indicate the unit is underfired

#### Feedback

Your answer is incorrect.

The correct answer is: indicate the unit is underfired

#### Question text

The correction factor of 1.679 would be used for a system operating at:

Select one:

- ☒
  - a. 5 psig (34 kPa)
- ☐
  - b. 10 psig (70 kPa)
- ☐

c.  
20 psig (140 kPa)

d.  
2 psig (14 kPa)

#### Feedback

Your answer is incorrect.

$PCF = \text{Meter Pressure} + \text{Local Atmospheric Pressure} - \text{Standard Pressure}$   
 $PCF = \text{Meter Pressure} + \text{Local Atmospheric Pressure} - \text{Standard Pressure}$

$\text{Meter Pressure} = PCF \times \text{Standard Pressure} - \text{Local Atmospheric Pressure}$   
 $\text{Meter Pressure} = PCF \times \text{Standard Pressure} - \text{Local Atmospheric Pressure}$

$\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$   
 $\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$   
 $\text{Meter Pressure} = 10 \text{ psig}$   
 $\text{Meter Pressure} = 10 \text{ psig}$

The correct answer is: 10 psig (70 kPa)

#### Question text

calculate the input to an appliance by using the following information:

- Local atmospheric pressure = 14.60 Psi
- Gas service line pressure = 60 Psig
- Gas pressure through the meter = 10 Psig
- House line pressure = 2 Psig
- Appliance manifold pressure = 5 inches water column
- Test dial = 0.05 m<sup>3</sup>/m<sup>3</sup>

Test dial completes one revolution in 1 minute. Calorific value of gas = 1,000 Btu/Ft.<sup>3</sup> (10.35 kW/m<sup>3</sup> Btu/Ft.<sup>3</sup> (10.35 kW/m<sup>3</sup> ). The correct input is closest to which one of the following?

Select one:

a.  
177,000 Btu/h (51.8 kW)

b.  
536,000 Btu/h (156.9 kW)

c.  
300,000 Btu/h (87.9 kW)

d.  
106,000 Btu/h (31 kW)

#### Feedback

Your answer is incorrect.

$$3,600 \frac{\text{sec}}{\text{hr}} \cdot 60 \frac{\text{sec}}{\text{rev}} \times 0.05 \frac{\text{m}^3}{\text{rev}} \times (10 \text{ psig} + 14.6 \text{ psi} + 14.73 \text{ psia}) \times 35,310 \frac{\text{Btu}}{\text{m}^3} = 176,903 \frac{\text{Btu}}{\text{h}}$$

$$3,600 \frac{\text{sec}}{\text{hr}} \cdot 60 \frac{\text{sec}}{\text{rev}} \times 0.05 \frac{\text{m}^3}{\text{rev}} \times (10 \text{ psig} + 14.6 \text{ psi} + 14.73 \text{ psia}) \times 35,310 \frac{\text{Btu}}{\text{m}^3} = 176,903 \frac{\text{Btu}}{\text{h}}$$

The correct answer is: 177,000 Btu/h (51.8 kW)

Marked out of 1.00

#### Question text

Calculate the clocked input to the following boiler. The boiler has a rated input of 1,000,000 Btu/h (292.2 kW). It has four burners and operates at a manifold pressure of 7 inches water column (1.74 kPa). The fuel is natural gas with a calorific value of 1,050 Btu/Ft.<sup>3</sup> (10.84 kW/m<sup>3</sup>). The building is at sea level (14.73 Psi) and is supplied with 5 Psig (34 kPa) at the meter. One revolution of the 0.1 m<sup>3</sup> test dial takes 26 seconds. The clocked input of the boiler is closest to which one of the following?

Select one:

☐

a.  
520,000 Btu/h (152 kW)

☐

b.  
688,000 Btu/h (201 kW)

☐

c.  
490,000 Btu/h (143 kW)

☐

d.  
750,000 Btu/h (220 kW)

#### Feedback

Your answer is incorrect.

$$3,600 \frac{\text{sec}}{\text{hr}} \cdot 26 \frac{\text{sec}}{\text{rev}} \times 0.1 \frac{\text{m}^3}{\text{rev}} \times 35.31 \frac{\text{ft}^3}{\text{m}^3} \times (5 \text{ psig} + 14.73 \text{ psi} + 14.73 \text{ psia}) \times 1,050 \frac{\text{Btu}}{\text{ft}^3} = 687,380 \frac{\text{Btu}}{\text{h}}$$

$$3,600 \frac{\text{sec}}{\text{hr}} \cdot 26 \frac{\text{sec}}{\text{rev}} \times 0.1 \frac{\text{m}^3}{\text{rev}} \times 35.31 \frac{\text{ft}^3}{\text{m}^3} \times (5 \text{ psig} + 14.73 \text{ psi} + 14.73 \text{ psia}) \times 1,050 \frac{\text{Btu}}{\text{ft}^3} = 687,380 \frac{\text{Btu}}{\text{h}}$$

The correct answer is: 688,000 Btu/h (201 kW)

#### Question text

Calculate the input to a burner that is fired on a 50% butane-air mixture if it takes 48 seconds for the 2 ft.<sup>3</sup> test dial to complete one revolution. The gas meter has an operating pressure of 5 Psig:

Select one:

☐

a.  
240,000 Btu/h

☐

b.  
480,000 Btu/h

c.  
643,000 Btuh

d.  
321,000 Btuh

#### Feedback

Your answer is incorrect.

$$3,600 \frac{\text{sec}}{\text{hr}} \cdot 48 \frac{\text{sec}}{\text{rev}} \cdot \frac{1}{2} \frac{\text{ft}}{\text{rev}} \cdot \frac{1}{14.73} \frac{\text{psi}}{\text{ft}} \cdot (5 \text{ psig} + 14.73 \text{ psia}) \cdot 1,600 \frac{\text{Btu}}{\text{ft}^3} = 321,360 \frac{\text{Btu}}{\text{hr}}$$

$$3,600 \frac{\text{sec}}{\text{hr}} \cdot 48 \frac{\text{sec}}{\text{rev}} \cdot \frac{1}{2} \frac{\text{ft}}{\text{rev}} \cdot \frac{1}{14.73} \frac{\text{psi}}{\text{ft}} \cdot (5 \text{ psig} + 14.73 \text{ psia}) \cdot 1,600 \frac{\text{Btu}}{\text{ft}^3} = 321,360 \frac{\text{Btu}}{\text{hr}}$$

The correct answer is: 321,000 Btuh

#### Question text

Determine the input to a appliance under the following conditions (choose the closest answer):

- Service pressure = 60 Psig
- Local atmospheric pressure = 13.38 Psi
- Seconds/revolution = 18
- Meter pressure = 5 psig
- manifold pressure = 7 inches water column
- Test dial = 0.05 m<sup>3</sup>/rev. m<sup>3</sup>/rev.
- Building line pressure = 2 Psig
- Truck in the driveway = Green
- Weather = Partly Cloudy
- Gas = 1,050 Btu/Ft.<sup>3</sup> Btu/Ft.<sup>3</sup>

Select one:

a.  
496,000 Btuh

b.  
463,000 Btuh

c.  
420,000 Btuh

d.  
131,000 Btuh

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec/hr} \cdot 18 \text{ sec/rev} \cdot \times 0.05 \text{ m}^3 \text{ rev} \cdot \times (5 \text{ Psig} + 13.38 \text{ Psi} - 14.73 \text{ Psia}) \times 35.31 \text{ ft}^3 \text{ m}^3 \times 1,050 \text{ Btu/ft}^3 = 462,702 \text{ Btu/hr}$   
 $3,600 \text{ sec/hr} \cdot 18 \text{ sec/rev} \cdot \times 0.05 \text{ m}^3 \text{ rev} \cdot \times (5 \text{ Psig} + 13.38 \text{ Psi} - 14.73 \text{ Psia}) \times 35.31 \text{ ft}^3 \text{ m}^3 \times 1,050 \text{ Btu/ft}^3 = 462,702 \text{ Btu/hr}$

The correct answer is: 463,000 Btu/h

#### Question text

Calculate the input (to the closest answer) using the following information:

- Service Pressure = 60 Psig
- Meter pressure = 5 Psig
- Manifold pressure = 3.5 inches water column
- Test dial size = (5 cubic ft )
- Seconds/revolution = 20
- Calorific value = 1,000 Btu/Ft.<sup>3</sup>

Select one:

a.  
1,205,000 Btu/h

b.  
4,566,000 Btu/h

c.  
6,300,000 Btu/h

d.  
900,000 Btu/h

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec/hr} \cdot 20 \text{ sec/rev} \cdot \times 5 \text{ ft}^3 \text{ rev} \cdot \times (5 \text{ Psig} + 14.73 \text{ Psi} - 14.73 \text{ Psia}) \times 1,000 \text{ Btu/ft}^3 = 1,205,100 \text{ Btu/h}$

The correct answer is: 1,205,000 Btu/h

#### Question text

An appliance is clocked on a 2 Psi meter set without correcting for the pressure. The result will be:

Select one:

a.  
the appliance clocked input will be correct

b.  
there is no need to clock any appliance if 2 Psi gas is used

c.  
the appliance will appear to be overfired

d.  
the appliance will appear to be underfired

#### Feedback

Your answer is incorrect.

The correct answer is: the appliance will appear to be underfired

Which of the following is not a type of burner orifice ?

Select one:

a.  
Adjustable

b.  
Cap / Universal

c.  
Fixed

d.  
Modulating

#### Feedback

Your answer is correct.

The correct answer is: Modulating

#### Question text

Which orifice would be used in a DUAL FUEL appliance (natural gas / propane ) ?

Select one:

a.  
Fixed

b.  
Modulating

c.  
Cap / Universal

d.

Adjustable

Feedback

Your answer is incorrect.

The correct answer is: Cap / Universal

Question text

Referencing the multiplier table A.15 (B149.1 Gas Code )

What is the multiplier for air ?

Select one:

☐

a.  
Not listed

☐

b.  
1

☐

c.  
0.6

☒

d.  
0.775

Feedback

Your answer is correct.

The correct answer is: 0.775

Question text

What size orifices would be required to fire a 65000 BTUH (natural gas) furnace with 3 burners at 3 inches water column manifold pressure ?

Select one:

☐

a.  
44

☒

b.  
43

☐

c.  
3/32 inch

☐

d.  
42

### Feedback

Your answer is correct.

$65000 / 1000 \div 3 \text{ burner} = 21.668 \text{ CFH} / \text{Per burner}$

$21.667 \text{ CFH} @ 3 \text{ inch WC} = 43 (20.76 \text{ CFH})$

The correct answer is: 43

### Question text

Calculate the orifice flow rate and size for each of the following appliances fired on natural gas:

### Question text

An appliance is found to have a #51 orifice installed in each of its 4 burners. If fired on propane at 11 in. w.c. pressure, what would the input be? Answer  Btuh

### Feedback

Propane #51 @ 11" w.c. =  $13.37 \text{ CFH/orifice}$

$13.37 \text{ CFH/orifice} \times 4 \text{ Burners} \times 2,500 \text{ Btu/ft}^3 = 133,700 \text{ Btu/h}$

The correct answer is: 133700

### Question text

To change the fuel on an appliance from natural gas to propane which of the following would be done ?

Select one:

a.  
Install smaller orifices , increase manifold pressure

b.  
Install larger orifice , increase manifold pressure

c.  
Install smaller orifice , decrease manifold pressure

d.  
Install larger orifice , decrease manifold pressure

### Feedback

Your answer is incorrect.

The correct answer is: Install smaller orifices , increase manifold pressure

### Question text

An appliance with 5 burners is using propane at 11 inches w.c. manifold pressure. The orifice size used is found to be a #50. What would the input to this appliance be? Answer

72950

Btuh

### Feedback

Propane #50 @ 11" w.c. = 14.59CFH/orifice

input = 14.59CFH/orifice × 5 Burners × 2,500Btu/ft.<sup>3</sup> = 182,375

The correct answer is: 182375

### Question text

In the diagram below, the device shown is:

Select one:

a. a universal main burner orifice adjusted for natural gas operation

b. an insert type pilot orifice

c. a universal main burner orifice adjusted for propane operation

d. a spud type pilot orifice

### Feedback

Your answer is correct.

The correct answer is: a universal main burner orifice adjusted for propane operation

#### Question text

If the cross-sectional area of an orifice is doubled, the flow rate will be increased by:

Select one:

☐

a.  
half the original flow rate

☒

b.  
twice the original flow rate

☐

c.  
four times the original flow rate

☐

d.  
eight times the original flow rate

#### Feedback

Your answer is correct.

The correct answer is: twice the original flow rate

#### Question text

A natural gas boiler is equipped with 20 burners and fires at a manifold pressure of 3.5 in. w.c. It is determined with the use of orifice drills that each orifice is a #50. The calorific value of gas burned is 1,070 Btu/Ft.<sup>3</sup>. The firing rate of the boiler will be closest to:

Select one:

☐

a.  
257,000 Btuh

☐

b.  
15,000 Btuh

☒

c.  
278,000 Btuh

☐

d.  
298,000 Btuh

#### Feedback

Your answer is incorrect.

Natural Gas #50 @ 3.5" w.c. = 13.87 CFH/orifice

Input = 13.87 CFH/orifice × 20 Burners × 1,070 Btu/ft.<sup>3</sup> = 298,000 Btuh

The correct answer is: 298,000 Btuh

#### Question text

A Natural Gas appliance has a rated input of 140 MBH. If the appliance has four burners and operates at a manifold pressure of 7 inches water column, the correct orifice to fire the appliance to its rated input would be:

Select one:

a.  
#41

b.  
#42

c.  
#43

d.  
#13

#### Feedback

Your answer is correct.

$140,000 \text{ Btuh} \div 1,000 \text{ Btuft} = 140 \text{ CFH}$   
 $140 \text{ CFH} \div 4 \text{ Burners} = 35 \text{ CFH orifice}$   
 $35 \text{ CFH orifice} @ 7" \text{ W.C.} = \# 43$

The correct answer is: #43

#### Question text

An appliance equipped with three burners and using natural gas at 3.5 inches water column pressure, has a rated input of 300 MBH. Select the orifices required:

Select one:

a.  
#13

b.  
3/16"

c.  
#14

d.  
#12

### Feedback

Your answer is correct.

$300,000 \text{ Btu/h} \div 1,000 \text{ Btu/ft}^3 \div 3 \text{ burners} = 100 \text{ CFH/orifice}$   
 $300,000 \text{ Btu/h} \div 1,000 \text{ Btu/ft}^3 \div 3 \text{ burners} = 100 \text{ CFH/orifice}$   
 $100 \text{ CFH/orifice} @ 3.5" \text{ W.C.} = 3/16"$   
 $100 \text{ CFH/orifice} @ 3.5" \text{ W.C.} = 3/16"$

The correct answer is: 3/16"

### Question text

A 375 MBH appliance which is operated on propane, has four burners fired at 11 inches water column manifold pressure. Select the orifices required:

Select one:

a.  
3/16"

b.  
#34

c.  
#54

d.  
1/8"

### Feedback

Your answer is incorrect.

$375,000 \text{ Btu/h} \div 2,500 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 37.5 \text{ CFH/orifice}$   
 $375,000 \text{ Btu/h} \div 2,500 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 37.5 \text{ CFH/orifice}$   
 $37.5 \text{ CFH/orifice} @ 11" \text{ W.C.} = 37.5 \text{ CFH/orifice} @ 11" \text{ W.C.} = \#34$

The correct answer is: #34

### Question text

Which orifice would have the highest flow rate?

Select one:

a.  
#24 @ 4 inches water column

b.  
#25 @ 4 inches water column

c.  
#25 @ 3 inches water column

d.  
#24 @ 3 inches water column

#### Feedback

Your answer is incorrect.

The correct answer is: #24 @ 4 inches water column

#### Question text

A propane-air mixture has a specific gravity of 1.3 and a calorific value of 1,250 Btu/Ft.<sup>3</sup>. If an appliance has a rated input of 200 MBH and has five burners operating on 4 inches water column manifold pressure, what is the required orifice size?

Select one:

a.  
#45

b.  
#38

c.  
#31

d.  
#33

#### Feedback

Your answer is correct.

$200,000 \text{ Btu/h} \div 1,250 \text{ Btu/ft}^3 \div 5 \text{ Burners} = 32 \text{ CFH orifice}$   
 $32 \text{ CFH orifice} \div 0.68 (\text{multiplier for Sg. 1.3}) = 47.06 \text{ CFH orifice}$   
 $47.06 \text{ CFH orifice} @ 4" \text{ w.c.} = 47.06 \text{ CFH orifice} @ 4" \text{ w.c.} = \#31$

The correct answer is: #31

#### Question text

An appliance has a high altitude rating of 245,500 Btuh and a sea level rating of 337,750 Btuh. Match the calculated de-rated inputs to the given elevations if they were installed at these elevations.

9,600 Ft. <sup>Answer 1</sup>  
337,750 Btuh

6,600 Ft. <sup>Answer 2</sup>  
245,500 Btuh

2,100 Ft. Answer 3  
216,040 Btuh

375 Ft. Answer 4  
186,580 Btuh

#### Feedback

Your answer is incorrect.

The correct answer is: 9,600 Ft. → 186,580 Btuh, 6,600 Ft. → 216,040 Btuh, 2,100 Ft. → 245,500 Btuh, 375 Ft. → 337,750 Btuh

#### Question text

A boiler certified for high altitude is installed at an elevation of 5,500 feet. The rating plate indicates a sea level rating of 150,000 Btuh and a high altitude rating of 130,000 Btuh. The boiler should be adjusted to an input of:

Select one:

a.  
150,000 Btuh

b.  
130,000 Btuh

c.  
124,800 Btuh

d.  
109,200 Btuh

#### Feedback

Your answer is incorrect.

$130,000 \text{ Btuh} - 4\% = 124,800 \text{ Btuh}$

The correct answer is: 124,800 Btuh

#### Question text

To double the gas flow through the orifice of an atmospheric burner, the manifold pressure shall be increased by:

Select one:

a.  
50%

b.  
four times

c.  
double

d.  
three times

#### Feedback

Your answer is incorrect.

$$Q = \Delta P \sqrt{C} \quad \sqrt{Q} = \sqrt{\Delta P}$$

$$2^2 = \Delta P \quad 2^2 = \Delta P$$

$$4 = \Delta P \quad 4 = \Delta P$$

The correct answer is: four times

#### Question text

Find the orifice sizes required for the following appliances:

385,000 Btuh; Calorific Value = 1,050 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>; 5 Burners; Manifold Pressure = 3.5 inches water column; Specific Gravity = 0.6

Select one:

a.  
#21

b.  
#20

c.  
#22

d.  
#19

#### Feedback

Your answer is correct.

$$385,000 \text{ Btuh} / 1,050 \text{ Btu/Ft.}^3 \div 5 \text{ Burners} = 73.333 \text{ CFH orifice}$$

$$73.333 \text{ CFH orifice} @ 3.5" \text{ w.c.} = 73.333 \text{ CFH orifice} @ 3.5" \text{ w.c.} = \#21$$

The correct answer is: #21

#### Question text

225,000 Btuh; Calorific Value = 1,350 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>; 4 Burners; Manifold Pressure = 4 inches water column; Specific Gravity = 1.2

Select one:

a.  
#30

b.  
#31

c.  
#28

d.  
#29

#### Feedback

Your answer is correct.

$225,000 \text{ Btu/h} \div 1,350 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 41.667 \text{ CFH/orifice}$

$41.667 \text{ CFH/orifice} \div 0.707 (\text{multiplier for Sg.}) = 58.934 \text{ CFH/orifice @ "w.c.} = 41.667 \text{ CFH/orifice} \div 0.707 (\text{multiplier for Sg.}) = 58.934 \text{ CFH/orifice @ "w.c.} = \#29$

The correct answer is: #29

#### Question text

1,300 MBH; Calorific Value = 985 Btu/Ft.<sup>3</sup>; 10 Burners; Manifold Pressure = 3 inches water column; Specific Gravity = 0.9

Select one:

a.  
C

b.  
B

c.  
D

d.  
E

#### Feedback

Your answer is correct.

$1,300,000 \text{ Btu/h} \div 985 \text{ Btu/ft}^3 \div 10 \text{ Burners} = 131.98 \text{ CFH/orifice}$

$131.98 \text{ CFH orifice} \div 0.817 (\text{Multiplier for Sg.}) = 161.542 \text{ CFH orifice @ 3" w.c.} = "D"$   
 $131.98 \text{ CFH orifice} \div 0.817 (\text{Multiplier for Sg.}) = 161.542 \text{ CFH orifice @ 3" w.c.} = "D"$

The correct answer is: D

#### Question text

475,000 Btuh; Calorific Value = 1,000 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>; 8 Burners; Manifold Pressure = 3.5 inches water column; Specific Gravity = 0.6

Select one:

a.  
#29

b.  
#28

c.  
#27

d.  
#26

#### Feedback

Your answer is correct.

$475,000 \text{ Btuh} \div 1,000 \text{ Btu ft.}^3 \div 8 \text{ Burners} = 59.375 \text{ CFH orifice @ 3.5" w.c.} = 475,000 \text{ Btuh} \div 1,000 \text{ Btu ft.}^3 \div 8 \text{ Burners} = 59.375 \text{ CFH orifice @ 3.5" w.c.} = \#27$

The correct answer is: #27

#### Question text

160,000 Btuh; Calorific Value = 1,250 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>; 4 Burners; Manifold Pressure = 5 inches water column; Specific Gravity = 0.8

Select one:

a.  
#38

b.  
#37

c.  
#35

d.

#36

#### Feedback

Your answer is correct.

$160,000 \text{ Btu/h} \div 1,250 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 32 \text{ CFH/orifice}$   
 $160,000 \text{ Btu/h} \div 1,250 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 32 \text{ CFH/orifice}$   
 $32 \text{ CFH/orifice} \div 0.867 (\text{Multiplier for Sg.}) = 36.909 \text{ CFH/orifice @ 5" w.c.} = 32 \text{ CFH/orifice} \div 0.867 (\text{Multiplier for Sg.}) = 36.909 \text{ CFH/orifice @ 5" w.c.} = \#37$

The correct answer is: #37

#### Question text

650,000 Btu/h; Calorific Value = 1,070 Btu/Ft.<sup>3</sup>; 6 Burners; Manifold Pressure = 3 inches water column; Specific Gravity = 0.8

Select one:

a.  
#5

b.  
#2

c.  
#4

d.  
#3

#### Feedback

Your answer is correct.

$650,000 \text{ Btu/h} \div 1,070 \text{ Btu/ft}^3 \div 6 \text{ Burners} = 101.246 \text{ CFH/orifice}$   
 $650,000 \text{ Btu/h} \div 1,070 \text{ Btu/ft}^3 \div 6 \text{ Burners} = 101.246 \text{ CFH/orifice}$   
 $101.246 \text{ CFH/orifice} \div 0.867 (\text{Multiplier for Sg.}) = 116.778 \text{ CFH/orifice @ 3" w.c.} = 101.246 \text{ CFH/orifice} \div 0.867 (\text{Multiplier for Sg.}) = 116.778 \text{ CFH/orifice @ 3" w.c.} =$

The correct answer is: #4

#### Question text

How much air could pass through a #40 orifice at 3.5 inches water column? Answer

271900

CFH/orifice

#### Feedback

#40 @ 3.5" w.c.

$= 27.19 \text{ CFH/orifice (Natural Gas)} \times 0.775 (\text{Multiplier for Sg.}) = 21.07 \text{ CFH/orifice}$   
 $27.19 \text{ CFH/orifice (Natural Gas)} \times 0.775 (\text{Multiplier for Sg.}) = 21.07 \text{ CFH/orifice}$

The correct answer is: 21.07

#### Question text

An appliance has a sea level rating of 250 MBH and a high altitude rating of 220 MBH. The rating plate specifies a manifold pressure of 3.5 inches water column. When you look in the combustion chamber, you notice 5 upshot multi-port burners. The fuel gas supplied to this appliance has a calorific value of 0.314 kW/ft.<sup>3</sup> and a specific gravity of 0.65. If you are installing this appliance at an elevation of 6,000 feet above sea level, what size of orifices would be required to fire the appliance to its rated input?

Select one:

a.  
#32

b.  
#31

c.  
#34

d.  
#33

#### Feedback

Your answer is incorrect.

$$220,000\text{Btuh} - 8220,000\text{Btuh} - 8\% = 202,400\text{Btuh} = 202,400\text{Btuh}$$

$$0.314\text{kWft}^3 \div 0.000293\text{kWBtu} = 1,072\text{Btuft}^3 \quad 0.314\text{kWft}^3 \div 0.000293\text{kWBtu} = 1,072\text{Btuft}^3$$

$$202,400\text{Btuh} \div 1,072\text{Btuft}^3 \div 5 \text{ Burners} = 37.761\text{CFHorifice} \quad 202,400\text{Btuh} \div 1,072\text{Btuft}^3 \div 5 \text{ Burners} = 37.761\text{CFHorifice}$$

$$37.761\text{CFHorifice} \div 0.962(\text{Multiplier for Sg.}) = 39.253\text{CFHorifice} \quad 37.761\text{CFHorifice} \div 0.962(\text{Multiplier for Sg.}) = 39.253\text{CFHorifice}$$

$$39.253\text{CFHorifice} @ 3.5" \text{w.c.} = 39.253\text{CFHorifice} @ 3.5" \text{w.c.} = \#32$$

The correct answer is: #32

The drawing below is of a propane:

Select one:

a.  
evacuation valve for large tanks

b.  
valve with overfill protection device

c.  
cylinder liquid withdrawal valve

d.  
liquid withdrawal valve for a forklift

#### Feedback

Your answer is correct.

The correct answer is: valve with overfill protection device

#### Question text

The smallest size cylinder, known as a disposable type, is:

Select one:

a.

5 pounds

b.

10 pounds

c.

20 pounds

d.

1 pound

#### Feedback

Your answer is correct.

The correct answer is: 1 pound

#### Question text

What is the sum of all whole numbers from 1 to infinity?  $\sum_{n=1}^{\infty}$

Select one:

a.

Cannot be determined

b.

-1/12

c.

$\infty$

d.

0

### Feedback

Your answer is incorrect.

find the proof here if you're curious :

<https://www.youtube.com/watch?v=w-l6XTVZXww>

The correct answer is:  $-1/12$

### Question text

The largest size cylinder is:

Select one:

a.

1,000 pounds

b.

500 pounds

c.

100 pounds

d.

250 pounds

### Feedback

Your answer is incorrect.

The correct answer is: 500 pounds

### Question text

Liquid propane capacity is listed on tanks in:

Select one:

a.

pounds of propane

b.  
pounds for small tanks and gallons for big tanks

☐

c.  
pounds or gallons of propane on all tanks

☒

d.  
gallons of water capacity

#### Feedback

Your answer is correct.

The correct answer is: gallons of water capacity

#### Question Question text

The type of thread connection found on the outlet of a vapour service valve is:

Select one:

☒

a.  
POL

☐

b.  
NPT

☐

c.  
BSPT

☐

d.  
NPS

#### Feedback

Your answer is correct.

The correct answer is: POL

#### Question text

The relief valve start-to-discharge pressure for a cylinder is:

Select one:

a.

312 Psig

b.

420 Psig

c.

250 Psig

d.

375 Psig

#### Feedback

Your answer is correct.

The correct answer is: 375 Psig

#### Question text

A data plate with construction information is found attached to:

Select one:

a.

cylinders and tanks

b.

cylinders

c.

tanks

d.

cylinders over 420 pounds capacity

#### Feedback

Your answer is correct.

The correct answer is: tanks

#### Question text

When calculating the *effective load* that an appliance will place on a propane container, which formula should be used?

Select one:

☐

a.

Effective load = weight of propane X load factor

☒

b.

Effective load = input X load factor

☐

c.

Effective load = gallons of liquid propane X 91,500

☐

d.

Effective load = Btu/H of input

#### Feedback

Your answer is correct.

The correct answer is: Effective load = input X load factor

#### Question text

Calculate the effective load on a propane container supplying a 100,000 Btu/h central heating furnace: Answer  Btuh

#### Feedback

100,000 Btuh x 0.5 = 50,000 Btuh

The correct answer is: 50000

#### Question text

Calculate the effective load on a propane storage container for a 50,000 Btu/h construction heater: Answer  Btu

### Feedback

50,000 Btuh x 1 = 50,000 Btu

The correct answer is: 50000

### Question text

A propane-fired furnace at 100,000 Btu/h and hot water tank at 40,000 Btu/h are connected to an above ground storage tank. If the lowest winter temperature in the area is 10°F, calculate the size of the propane storage tank required at 75% humidity: Answer  Gal. Tank

### Feedback

Furnace 100,000 Btuh x 0.5 = 50,000 Btuh

Hot Water Tank 40,000 Btuh x 0.16 = 6,400 Btuh

Total = 56,400 Btuh

56,400 Btuh @ 10°F and 80% Humidity = 1,000 Gal. Tank

The correct answer is: 1000

The type of container usually considered portable would be a .

### Feedback

Your answer is correct.

The correct answer is:

The type of container usually considered portable would be a [Cylinder].

### Question text

A 20lb propane cylinder would hold Answer  pounds of liquid propane.

### Feedback

The correct answer is: 20

### Question text

The density of liquid propane is Answer  lbs / cubic foot.

### Feedback

The correct answer is: 31.8

### Question text

The  weight of a cylinder is the weight of an empty cylinder with valve.

### Feedback

Your answer is incorrect.

The correct answer is:

The [Tare] weight of a cylinder is the weight of an empty cylinder with valve.

### Question text

The  in a propane cylinder will vary widely with ambient temperature.

#### Feedback

Your answer is incorrect.

The correct answer is: The [Pressure] in a propane cylinder will vary widely with ambient temperature.

#### Question text

The pressure relief valve setting on a propane cylinder is typically Answer  psig.

#### Feedback

The correct answer is: 375

#### Question text

The maximum permitted fill level of a propane cylinder Answer  percent.

#### Feedback

The correct answer is: 80

#### Question text

At atmospheric pressure , propane is found in what physical state ?

#### Feedback

Your answer is incorrect.

The correct answer is:

At atmospheric pressure , propane is found in what physical state ? [Gas]

#### Question text

Vaporization of gas creates a natural \_\_\_\_\_ effect.

Select one:

a.

Refrigeration

b.

Vapourization

c.

Heating

d.

Condensing

**Feedback**

Your answer is incorrect.

The correct answer is: Refrigeration

**Question text**

What name is given to the connection that is utilized for vapor service applications ?

Select one:

a.

P.O.L

b.

C.S.A

c.

M.V.P

d.

L.O.P

**Feedback**

Your answer is correct.

The correct answer is: P.O.L

**Question text**

The  area of a container is the specific area that comes into contact with the LP gas liquid.

**Feedback**

Your answer is correct.

The correct answer is:

The [Wetted] area of a container is the specific area that comes into contact with the LP gas liquid.

### Question text

The greater the wetter area the greater the  vaporization rate.

### Feedback

Your answer is incorrect.

The correct answer is:

The greater the wetter area the greater the  vaporization rate.

### Question text

The largest portable LP gas container would be a Answer  pound cylinder.

### Feedback

The correct answer is: 500

Given a closed container in which there is 16 cubic feet of air at 35 PSIG, what will the volume of air be if water is forced into the container until the pressure becomes 105 PSIG?

Answer  cu.Ft

### Feedback

$V_1P_1 = V_2P_2$

$V_2 = (V_1P_1)/P_2$

$V_2 = (16 \times 49.73) / 119.73$

$V_2 = 6.646$  cu.Ft

Don't forget all pressures must be entered as PSIA

The correct answer is: 6.646

Marked out of 1.00

### Question text

What will the volume be if 920 cubic inches of gas is cooled from 16C to -7C?

Answer  cu.in

### Feedback

$V_1/T_1 = V_2/T_2$

$V_2 = (V_1T_2) / T_1$

$V_2 = (920 \times 266) / 289$

$V_2 = 846.782$  cu.in

The correct answer is: 846.782

### Question text

If 310 cubic feet of oxygen is under a pressure of 50 PSIG, to what gauge pressure must the gas be compressed so that it fits into a 15 cubic foot cylinder?

Answer  PSIG

#### Feedback

$$V_1P_1 = V_2P_2$$

$$P_2 = (V_1P_1) / V_2$$

$$P_2 = (310 \times 64.73) / 15$$

$$P_2 = 1337.753 \text{ psia}$$

$$\text{PSIG} = \text{PSIA} - \text{Atmospheric Pressure}$$

$$\text{PSIG} = 1337.753 - 14.73$$

$$\text{PSIG} = 1323.023$$

The correct answer is: 1323.023

#### Question text

An 8 cubic foot air chamber at 40 PSIG is released into the atmosphere. What volume will the released air have?

Answer  cu.Ft

#### Feedback

$$V_1P_1 = V_2P_2$$

$$V_2 = (V_1P_1)/P_2$$

$$V_2 = (8 \times 54.73) / 14.73$$

$$V_2 = 29.724 \text{ cu.Ft}$$

Don't forget all pressures must be entered as PSIA

The correct answer is: 29.724

#### Question text

A gas measures 920 cubic inches at 60F. What is its volume at 93F?

Answer  cu.in

#### Feedback

$$V_1/T_1 = V_2/T_2$$

$$V_2 = (V_1T_2) / T_1$$

$$V_2 = (920 \times 553) / 520$$

$$V_2 = 978.385 \text{ cu.in}$$

The correct answer is: 978.385

#### Question text

A compression tank in a hot water space heating system contains 4 cu.ft. at 5 PSIG. What will the pressure be when the air volume is 2 cu.ft.?

Answer  PSIG

#### Feedback

$$V_1P_1 = V_2P_2$$

$$P_2 = (V_1P_1) / V_2$$

$$P_2 = (4 \times 19.73) / 2$$

$$P_2 = 39.46 \text{ psia}$$

$$\text{PSIG} = \text{PSIA} - \text{Atmospheric Pressure}$$

$$\text{PSIG} = 39.46 - 14.73$$

$$\text{PSIG} = 24.73$$

The correct answer is: 24.73

#### Question text

Select Boyles Law:

Select one:

a.

$$V_1P_1 = V_2P_2$$

b.

$$P_1/T_1 = P_2/T_2$$

c.

$$V_1/P_1 = V_2/T_2$$

d.

$$V_1/T_1 = V_2/T_2$$

#### Feedback

Your answer is incorrect.

The correct answer is:  $V_1P_1 = V_2P_2$

Question text

Select Charles' Law I and II:

Select one or more:

☐

a.

$$V_1/P_1 = V_2/P_2$$

☐

b.

$$V_1/T_1 = V_2/T_2$$

☐

c.

$$T_1/P_1 = T_2/P_2$$

☐

d.

$$P_1/V_1 = P_2/V_2$$

☐

e.

$$P_1/T_1 = P_2/T_2$$

Feedback

Your answer is incorrect.

CL #1 -  $P_1/T_1 = P_2/T_2$

CL #2 -  $V_1/T_1 = V_2/T_2$

The correct answers are:  $P_1/T_1 = P_2/T_2$ ,  $V_1/T_1 = V_2/T_2$

Question text

All gases expand the same amount when heated one degree.

Select one:

☐

True

☐

False

Feedback

The correct answer is 'True'.

Question text

The smallest size cylinder, known as a disposable type, is:

Select one:

a.

20 pounds

b.

10 pounds

c.

1 pound

d.

5 pounds

#### Feedback

Your answer is incorrect.

The correct answer is: 1 pound

#### Question text

The largest size cylinder is:

Select one:

a.

100 pounds

b.

1,000 pounds

c.

500 pounds

d.

250 pounds

**Feedback**

Your answer is incorrect.

The correct answer is: 500 pounds

**Question text**

Liquid propane capacity is listed on tanks in:

Select one:

☐

a.

pounds for small tanks and gallons for big tanks

☐

b.

pounds or gallons of propane on all tanks

☐

c.

pounds of propane

☐

d.

gallons of water capacity

**Feedback**

Your answer is incorrect.

The correct answer is: gallons of water capacity

**Question text**

The type of thread connection found on the outlet of a vapour service valve is:

Select one:

☐

a.

POL

☐

b.

NPS

c.

BSPT

d.

NPT

#### Feedback

Your answer is incorrect.

The correct answer is: POL

#### Question text

The relief valve start-to-discharge pressure for a cylinder is:

Select one:

a.

250 psig

b.

420 psig

c.

375 psig

d.

312 psig

#### Feedback

Your answer is incorrect.

The correct answer is: 375 psig

#### Question text

A data plate with construction information is found attached to:

Select one:

a.

cylinders

b.

cylinders over 420 pounds capacity

c.

tanks

d.

cylinders and tanks

#### Feedback

Your answer is incorrect.

The correct answer is: tanks

#### Question text

When calculating the effective load that an appliance will place on a propane container, which formula should be used?

Select one:

a.

Effective load = weight of propane x load factor

b.

Effective load = Btu/h of input

c.

Effective load – gallons of liquid propane x 91,500

d.

Effective load = input x load factor

**Feedback**

Your answer is incorrect.

The correct answer is: Effective load = input x load factor

**Question text**

Calculate the effective load on a propane container of a 100,000 Btu/h domestic furnace:

Answer  Btuh

**Feedback**

Effective Load = 100,000 Btuh x 0.5 = 50,000 Btuh

The correct answer is: 50000

**Question text**

Calculate the effective load on a propane storage container of a 50,000 Btu/h construction heater:

Answer  Btuh

**Feedback**

Effective Load = 50,000 Btuh x 1 = 50,000 Btuh

The correct answer is: 50000

Referring to the tables in the text. A propane-fired furnace at 100,000 Btu/h and hot water tank at 40,000 Btu/h are connected to an above ground storage tank. If the lowest winter temperatures in the area are 10F, calculate the size of the propane storage tank required (at 70% humidity):

Answer  gallon tank

**Feedback**

100,000 Btuh x 0.5 = 50,000 Btuh

40,000 Btuh x 0.16 = 6,400 Btuh

Total = 56,400 Btuh

Table A-1 = 500 gallon tank

The correct answer is: 500

**Question text**

A storage type hot water tank rated at 35,000 Btu/h is designed to fire on low pressure natural gas (C.V. 1,050 Btu/cu.ft.). You clock the meter and find that it takes 50 seconds for one complete revolution of the 1/2 cubic foot test dial. This indicates that the appliance is:

Select one:

a.

over-firing and the orifice will have to be decreased in size

b.

under-fired and the orifice will have to be increased in size

c.

under-fired and the orifice will have to be decreased in size

d.

firing correctly and no adjustments are necessary

#### Feedback

Your answer is incorrect.

$3600\text{sec/hr} \div 0.5\text{cu.Ft/rev} \times 1050\text{Btu/cu.Ft} = \mathbf{37800 \text{ Btuh}}$

The correct answer is: over-firing and the orifice will have to be decreased in size

Which of the following is the pressure correction factor formula?

Select one:

a.

$PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

b.

$PCF = \frac{\text{Meter Pressure} \times \text{Absolute Pressure}}{\text{Sea Level Pressure}}$   $PCF = \frac{\text{Meter Pressure} \times \text{Absolute Pressure}}{\text{Sea Level Pressure}}$

c.

$PCF = \frac{\text{Meter Pressure} \times \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$   $PCF = \frac{\text{Meter Pressure} \times \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$

d.

$PCF = \frac{\text{Meter Pressure} + \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$

#### Feedback

Your answer is correct.

The correct answer

is:  $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

#### Question text

Which of the following is the temperature correction factor formula?

Select one:

a.

$TCF = \frac{\text{Gas Temp} + 460(273)}{\text{Standard Temp} + 460(273)}$   $TCF = \frac{\text{Gas Temp} + 460(273)}{\text{Standard Temp} + 460(273)}$

b.

$TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Standard Pressure} + 14.73}$   $TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Standard Pressure} + 14.73}$

c.

$TCF = \frac{\text{Standard Pressure} + 14.73}{\text{Standard Temp} + 460(273)}$   $TCF = \frac{\text{Standard Pressure} + 14.73}{\text{Standard Temp} + 460(273)}$

d.

$TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Gas Temp} + 460(273)}$   $TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Gas Temp} + 460(273)}$

#### Feedback

Your answer is correct.

The correct answer is:  $TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Gas Temp} + 460(273)}$   $TCF = \frac{\text{Standard Temp} + 460(273)}{\text{Gas Temp} + 460(273)}$

#### Question text

Simply stated, Boyle's Law says that if the pressure exerted upon a gas increases, its volume will Answer .

Feedback

The correct answer is: decrease

Question text

Simply stated, Charles' Law says that if the temperature exerted upon a gas increases, its volume will Answer .

Feedback

The correct answer is: increase

Question text

Which type of meter has the correction factor stamped on a brass tag attached to the meter? Answer .

Feedback

The correct answer is: Pressure Factor Measurement

Question text

Clock the input using the following information:

- Test Dial = 5 Ft.3Ft.3
- Time for One Revolution = 15 seconds
- Gas = Natural
- Local Atmospheric Pressure = 14.28 Psi
- Meter Pressure = 10 Psi

Input = Answer  Btuh

Feedback

input

= 3,600sec.hr.15sec.rev.x5ft.3rev.x(10Psig+14.28Psi14.73Psia)×1,000Btuft.33,600sec.hr.15sec.rev.x5ft.3rev.x(10Psig+14.28Psi14.73Psia)×1,000Btuft.3

The correct answer is: 1977600

Question 7

Question text

Determine the input to the appliance if:

- Seconds per revolution = 17
- Gas temperature = 22°F
- Test dial = 5 Ft.3Ft.3
- Gas = Natural
- Local Atmospheric Pressure = 14.56 Psi
- Meter Pressure = 20 Psi
- Meter not temperature compensated

Input = Answer  Btuh

Feedback

Input

$= 3,600 \text{ sec.} \cdot \text{hr.} \cdot 17 \text{ sec.} \cdot \text{rev.} \cdot 5 \text{ ft.} \cdot 3 \text{ hr.} \cdot (20 \text{ Psig} + 14.56 \text{ Psi} \cdot 14.73 \text{ Psia}) \cdot (60 \text{ F} + 460.22 \text{ F} + 460) \cdot 1,000 \text{ Btuft.}$   
 $33,600 \text{ sec.} \cdot \text{hr.} \cdot 17 \text{ sec.} \cdot \text{rev.} \cdot 5 \text{ ft.} \cdot 3 \text{ hr.} \cdot (20 \text{ Psig} + 14.56 \text{ Psi} \cdot 14.73 \text{ Psia}) \cdot (60 \text{ F} + 460.22 \text{ F} + 460) \cdot 1,000 \text{ Btuft.}$

The correct answer is: 2680236

Question text

Given a closed container in which there is 16 cubic feet of air at 35 Psig, what will the volume of air be if water is forced into the container until the pressure becomes 105 Psig?

V2V2 = Answer  ft.3ft.3

Feedback

$V_2 = V_1 P_1 P_2 V_2 = V_1 P_1 P_2$

$V_2 = 16 \text{ ft.} \cdot 3 \cdot (35 \text{ Psig} + 14.73 \text{ psi}) (105 \text{ psig} + 14.73 \text{ psi})$   
 $V_2 = 16 \text{ ft.} \cdot 3 \cdot (35 \text{ Psig} + 14.73 \text{ psi}) (105 \text{ psig} + 14.73 \text{ psi})$

The correct answer is: 6.65

Question text

What will the volume be if the 920 cubic inches of gas is cooled from 16°C to -7°C ? (to 2 decimals)

V2V2 = Answer  in.3in.3

Feedback

$V_2 = V_1 T_2 T_1 V_2 = V_1 T_2 T_1$

$V_2 = 920 \text{ in.} \cdot 3 \cdot (-7^\circ \text{C} + 273) (16^\circ \text{C} + 273)$   
 $V_2 = 920 \text{ in.} \cdot 3 \cdot (-7^\circ \text{C} + 273) (16^\circ \text{C} + 273)$

The correct answer is: 846.78

Question text

If 310 cubic feet of oxygen is under a pressure of 50 Psig, to what gauge pressure must the gas be compressed so that it fits into a 15 cubic foot cylinder? (to 2 decimals)

P2P2 = Answer  psigpsig

Feedback

$P_2 = V_1 P_1 V_2 P_2 = V_1 P_1 V_2$

$P_2 = 310 \text{ ft.} \cdot 3 \cdot (50 \text{ psig} + 14.73 \text{ psi}) 15 \text{ ft.} \cdot 3$   
 $P_2 = 310 \text{ ft.} \cdot 3 \cdot (50 \text{ psig} + 14.73 \text{ psi}) 15 \text{ ft.} \cdot 3$

$P_2 = 1,337.75 \text{ psia} - 14.73 \text{ psi}$   
 $P_2 = 1,337.75 \text{ psia} - 14.73 \text{ psi}$

The correct answer is: 1323.02

Question text

An 8 cubic foot air chamber at 40 Psig is released into the atmosphere. What volume will the released air have? (to 2 decimals)

V2V2 Answer  ft.3ft.3

Feedback

$$V_2 = V_1 P_1 P_2 V_2 = V_1 P_1 P_2$$

$$V_2 = 8 \text{ ft.} 3 \times (40 \text{ psig} + 14.73 \text{ psia}) 14.73 \text{ Psia } V_2 = 8 \text{ ft.} 3 \times (40 \text{ psig} + 14.73 \text{ psia}) 14.73 \text{ Psia}$$

The correct answer is: 29.72

Question text

A gas measures 920 cubic inches at 60°F. What is its volume at 93°F?

V2V2 = Answer  in.3in.3

Feedback

$$V_2 = V_1 T_2 T_1 V_2 = V_1 T_2 T_1$$

$$V_2 = 920 \text{ in.} 3 \times (93 \text{ F} + 460) (60 \text{ F} + 460) V_2 = 920 \text{ in.} 3 \times (93 \text{ F} + 460) (60 \text{ F} + 460)$$

The correct answer is: 978.38

Question text

Which of the following is the combined gas law formula?

Select one:

a.

$$V_1 T_1 P_1 = V_2 T_2 P_2 V_1 T_1 P_1 = V_2 T_2 P_2$$

b.

$$V_1 P_1 T_1 = V_2 P_2 T_2 V_1 P_1 T_1 = V_2 P_2 T_2$$

c.

$$V_1 P_1 T_1 = V_2 P_2 T_2 V_1 P_1 T_1 = V_2 P_2 T_2$$

d.

$$T_1 P_1 V_1 = T_2 P_2 V_2 T_1 P_1 V_1 = T_2 P_2 V_2$$

Feedback

Your answer is incorrect.

The correct answer is:  $V_1 P_1 T_1 = V_2 P_2 T_2 V_1 P_1 T_1 = V_2 P_2 T_2$

Question text

All gases expand the same amount when heated one degree.

Select one:

True

False

Feedback

The correct answer is 'True'.

Question text

The test dials are timed on a gas meter that is recording a flow rate of gas at pressures more than 1/2 Psi (3.45 kPa). If no allowance is made for the compression of the gas because of the pressure, the volume of flow indicated by the test dials will:

Select one:

a.

indicate the exact Btu input to the combustion chamber

b.

indicate the unit is overfired

c.

be the volume of fuel gas expressed in SCFH entering the combustion chamber

d.

indicate the unit is underfired

Feedback

Your answer is incorrect.

The correct answer is: indicate the unit is underfired

Question text

The correction factor of 1.679 would be used for a system operating at:

Select one:

a.

5 psig (34 kPa)

b.

10 psig (70 kPa)

c.

20 psig (140 kPa)

d.

2 psig (14 kPa)

#### Feedback

Your answer is incorrect.

$PCF = \text{Meter Pressure} + \text{Local Atmospheric Pressure} - \text{Standard Pressure}$   
 $PCF = \text{Meter Pressure} + \text{Local Atmospheric Pressure} - \text{Standard Pressure}$

$\text{Meter Pressure} = PCF \times \text{Standard Pressure} - \text{Local Atmospheric Pressure}$   
 $\text{Meter Pressure} = PCF \times \text{Standard Pressure} - \text{Local Atmospheric Pressure}$

$\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$   
 $\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$

$\text{Meter Pressure} = 10 \text{ psig}$   
 $\text{Meter Pressure} = 10 \text{ psig}$

The correct answer is: 10 psig (70 kPa)

#### Question 17

##### Question text

calculate the input to an appliance by using the following information:

- Local atmospheric pressure = 14.60 Psi
- Gas service line pressure = 60 Psig
- Gas pressure through the meter = 10 Psig
- House line pressure = 2 Psig
- Appliance manifold pressure = 5 inches water column
- Test dial = 0.05 m<sup>3</sup>m<sup>3</sup>

Test dial completes one revolution in 1 minute. Calorific value of gas = 1,000 Btu/Ft.<sup>3</sup> (10.35 (kW/m<sup>3</sup>Btu/Ft.<sup>3</sup>) (10.35 (kW/m<sup>3</sup>)). The correct input is closest to which one of the following?

Select one:

a.

177,000 Btu/h (51.8 kW)

b.

536,000 Btu/h (156.9 kW)

c.

300,000 Btu/h (87.9 kW)

d.

106,000 Btu/h (31 kW)

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times \text{hr.} \times 60 \text{ sec.} \times \text{rev.} \times 0.05 \text{ m}^3 \times (10 \text{ psig} + 14.6 \text{ psi} - 14.73 \text{ psia}) \times 35,310 \text{ Btu/m}^3 = 176,903 \text{ Btu/h}$   
 $3,600 \text{ sec.} \times \text{hr.} \times 60 \text{ sec.} \times \text{rev.} \times 0.05 \text{ m}^3 \times (10 \text{ psig} + 14.6 \text{ psi} - 14.73 \text{ psia}) \times 35,310 \text{ Btu/m}^3 = 176,903 \text{ Btu/h}$

The correct answer is: 177,000 Btu/h (51.8 kW)

##### Question text

Calculate the clocked input to the following boiler. The boiler has a rated input of 1,000,000 Btu/h (292.2 kW). it has four burners and operates at a manifold pressure of 7 inches water column (1.74 kPa). The fuel is natural gas with a calorific value of 1,050 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup> ( 10.84 kW/m<sup>3</sup>kW/m<sup>3</sup> ). The building is at sea level (14.73 Psi) and is supplied with 5 Psig (34 kPa) at the meter. One revolution of the 0.1 m<sup>3</sup>m<sup>3</sup> test dial takes 26 seconds. The clocked input of the boiler is closest to which one of the following?

Select one:

☐

a.

520,000 Btu/h (152 kW)

☐

b.

688,000 Btu/h (201 kW)

☐

c.

490,000 Btu/h (143 kW)

☐

d.

750,000 Btu/h (220 kW)

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times \frac{26 \text{ sec. rev.}}{0.1 \text{ m}^3 \text{ rev.}} \times 35.31 \text{ ft.}^3 \text{ m}^3 \times (5 \text{ psig} + 14.73 \text{ psi}) \times 1,050 \text{ Btu ft.}^3 = 687,380 \text{ Btu h}$   
 $3 \times (5 \text{ psig} + 14.73 \text{ psi}) \times 1,050 \text{ Btu ft.}^3 = 687,380 \text{ Btu h}$

The correct answer is: 688,000 Btu/h (201 kW)

#### Question text

Calculate the input to a burner that is fired on a 50% butane-air mixture if it takes 48 seconds for the 2 ft.<sup>3</sup>ft.<sup>3</sup> test dial to complete one revolution.

The gas meter has an operating pressure of 5 Psig:

Select one:

☐

a.

240,000 Btu/h

☐

b.

480,000 Btu/h

☐

c.

643,000 Btu/h

☐

d.

321,000 Btu/h

#### Feedback

Your answer is incorrect.

$3,600\text{sec.hr} \cdot 48\text{sec.rev.} \times 2\text{ft.3rev.} \times (5\text{psig} + 14.73\text{psia}) \times 1,600\text{Btuft.3} = 321,360\text{Btu3,600sec.hr} \cdot 48\text{sec.rev.} \times 2\text{ft.3rev.} \times (5\text{psig} + 14.73\text{psia}) \times 1,600\text{Btuft.3} = 321,360\text{Btu}$

The correct answer is: 321,000 Btu

#### Question text

Determine the input to a appliance under the following conditions (choose the closest answer):

- Service pressure = 60 Psig
- Local atmospheric pressure = 13.38 Psi
- Seconds/revolution = 18
- Meter pressure = 5 psig
- manifold pressure = 7 inches water column
- Test dial = 0.05 m<sup>3</sup>/rev.m<sup>3</sup>/rev.
- Building line pressure = 2 Psig
- Truck in the driveway = Green
- Weather = Partly Cloudy
- Gas = 1,050 Btu/Ft.3Btu/Ft.3

Select one:

a.

496,000 Btu

b.

463,000 Btu

c.

420,000 Btu

d.

131,000 Btu

#### Feedback

Your answer is incorrect.

$3,600\text{sec.hr} \cdot 18\text{sec.rev.} \times 0.05\text{m}^3\text{rev.} \times (5\text{Psig} + 13.38\text{Psi} + 14.73\text{Psia}) \times 35.31\text{ft.3m}^3 \times 1,050\text{Btuft.3} = 462,702\text{Btu3,600sec.hr} \cdot 18\text{sec.rev.} \times 0.05\text{m}^3\text{rev.} \times (5\text{Psig} + 13.38\text{Psi} + 14.73\text{Psia}) \times 35.31\text{ft.3m}^3 \times 1,050\text{Btuft.3} = 462,702\text{Btu}$

The correct answer is: 463,000 Btu

#### Question text

Calculate the input (to the closest answer) using the following information:

- Service Pressure = 60 Psig
- Meter pressure = 5 Psig
- Manifold pressure = 3.5 inches water column
- Test dial size = (5 cubic ft )
- Seconds/revolution = 20
- Calorific value = 1,000 Btu/Ft.3Btu/Ft.3

Select one:

a.

1,205,000 Btuh

b.

4,566,000 Btuh

c.

6,300,000 Btuh

d.

900,000 Btuh

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec. hr. } 20 \text{ sec. rev.} \times 5 \text{ ft. } 3 \text{ rev.} \times (5 \text{ Psig} + 14.73 \text{ Psi } 14.73 \text{ Psia}) \times 1,000 \text{ Btu ft. } 3 = 1,205,100 \text{ Btuh}$   
 $3,600 \text{ sec. hr. } 20 \text{ sec. rev.} \times 5 \text{ ft. } 3 \text{ rev.} \times (5 \text{ Psig} + 14.73 \text{ Psi } 14.73 \text{ Psia}) \times 1,000 \text{ Btu ft. } 3 = 1,205,100 \text{ Btuh}$

The correct answer is: 1,205,000 Btuh

#### Question text

An appliance is clocked on a 2 Psi meter set without correcting for the pressure. The result will be:

Select one:

a.

the appliance clocked input will be correct

b.

there is no need to clock any appliance if 2 Psi gas is used

c.

the appliance will appear to be overfired

d.

the appliance will appear to be underfired

Feedback

Your answer is incorrect.

The correct answer is: the appliance will appear to be underfired

How much Methane does Natural gas contain as a percentage ( % ) ?

Select one:

a.

80 to 95 %

b.

50 to 60%

c.

60 to 70 %

d.

100%

Feedback

Your answer is correct.

The correct answer is: 80 to 95 %

Question text

Is natural gas in its pure state a toxic gas? (type yes or no) Answer

no

Feedback

The correct answer is: No

Question text

For the following questions you can type in the chemical formulas as follows (eg water = H<sub>2</sub>O) do not include spaces in your answers.

List the chemical formula for Natural Gas. Answer

ch4

Feedback

The correct answer is: CH<sub>4</sub>

Question text

c3h8

List the chemical formula for Propane. Answer

Feedback

The correct answer is: C3H8

Question text

c4h10

List the chemical formula for Butane. Answer

Feedback

The correct answer is: C4H10

Question text

co2

List the chemical formula for Carbon monoxide. Answer

Feedback

The correct answer is: CO

Question text

co2

List the chemical formula for Carbon dioxide. Answer

Feedback

The correct answer is: CO2

Question text

mo

List the chemical formula for Methane. Answer

Feedback

The correct answer is: CH4

Question text

o2

List the chemical formula for Oxygen. Answer

Feedback

The correct answer is: O2

Question text

The ratio of the weight of a given volume of gas to the weight of an equal volume of air measured at standard temperature and pressure (60°F @ 14.73 Psi or 15°C @ 101.325 kPa). This is a description of...

Select one:

a.

Relative Heat

b.

Weight of a substance compared to the density of Hg

☐

c.

Relative Volume

☐

d.

Relative Density

#### Feedback

Your answer is incorrect.

The correct answer is: Relative Density

#### Question text

The total heat energy produced when a given volume of fuel is subjected to combustion.

Select one:

☐

a.

Specific Heat

☒

b.

Calorific Capacity

☐

c.

Heating Value

☐

d.

Combustion Capacity

#### Feedback

Your answer is incorrect.

The correct answer is: Heating Value

Question text

When one cubic foot of natural gas is burned it will produce Answer  British Thermal Units.

Feedback

The correct answer is: 1000

Question text

Having any lesser amount of fuel than the lower flammable limit, a mixture would be Answer  and would not burn.

Feedback

The correct answer is: lean

Question text

Which of the following is used to odourize natural gas?

Select one:

a.

Sulphur

b.

Citric Acid

c.

Onion Oil

d.

Mercaptan

Feedback

Your answer is incorrect.

The correct answer is: Mercaptan

Question text

Natural gas must be readily detectable when \_\_\_\_\_ of the fuel gas per volume is present.

Select one:

a.

less than 10%

b.

more than 10%

c.

less than 1%

d.

any amount

#### Feedback

Your answer is incorrect.

The correct answer is: less than 1%

#### Question text

At standard atmospheric pressure, 14.73 Psi (101.325 kPa), the boiling point of propane is Answer  . Answer in Fahrenheit as ####F (including the letter "F") .

#### Feedback

-44 F

or

-42 C

The correct answer is: -44F

#### Question text

Fuel gases are usually transported and stored in liquid state rather than as a gas due to the following:

(C3H8) 270 times more fuel can be stored in the same space.

(C4H10) 235 times more fuel can be stored in the same space.

Select one:

True

False

#### Feedback

The correct answer is 'True'.

#### Question text

The limits of flammability of propane gas in air are approximately:

Select one:

a.

2.5% to 9.5%

b.

4.6% to 14%

c.

5% to 15.3%

d.

10% to 45%

#### Feedback

Your answer is correct.

The correct answer is: 2.5% to 9.5%

#### Question text

Identify the limits of flammability for natural gas in air:

Select one:

a.

6% to 12%

b.

14% to 24%

c.

4% to 10%

d.

4% to 14%

#### Feedback

Your answer is correct.

The correct answer is: 4% to 14%

#### Question text

Natural gas is composed mainly of:

Select one:

a.

propane

b.

butane

c.

methane

d.

carbon dioxide

#### Feedback

Your answer is correct.

The correct answer is: methane

#### Question text

The relative density of propane vapour is approximately:

Select one:

a.

1.5

b.

0.8

c.

0.6

d.

2.0

Feedback

Your answer is correct.

The correct answer is: 1.5

Question text

What is the calorific value of Butane gas?

Select one:

a.

1,200Btu/Ft.3(.352kW/Ft.3)1,200Btu/Ft.3(.352kW/Ft.3)

b.

1,050Btu/Ft.3(.308kW/Ft.3)1,050Btu/Ft.3(.308kW/Ft.3)

c.

3,200Btu/Ft.3(.938kW/Ft.3)3,200Btu/Ft.3(.938kW/Ft.3)

d.

2,500Btu/Ft.3(.733kW/Ft.3)2,500Btu/Ft.3(.733kW/Ft.3)

**Feedback**

Your answer is correct.

The correct answer is: 3,200Btu/Ft.3(.938kW/Ft.3)3,200Btu/Ft.3(.938kW/Ft.3)

**Question text**

The heat generated by the complete combustion of a unit of fuel is commonly referred to as its:

Select one:

a.

distillation value

b.

combustion value

c.

flash value

d.

calorific value

**Feedback**

Your answer is correct.

The correct answer is: calorific value

**Question text**

Which of the following gases has the highest calorific value?

Select one:

a.

Natural Gas

b.

Carbon monoxide

c.

Butane

d.

Propane

Feedback

Your answer is correct.

The correct answer is: Butane

Question text

Natural gas must be preheated to approximately \_\_\_\_\_ °F before it will ignite.

Select one:

a.

3,500

b.

212

c.

1,200

d.

1,000

Feedback

Your answer is correct.

The correct answer is: 1,200

Question text

The flame temperature of natural gas is approximately \_\_\_\_\_ °F.

Select one:

a.

212

b.

1,000

c.

3,500

d.

1,200

Feedback

Your answer is incorrect.

The correct answer is: 3,500

Question text

The calorific value (heat value) of natural gas is approximately:

Select one:

a.

1,000Btu/Ft.3(10.35kW/m3)1,000Btu/Ft.3(10.35kW/m3)

b.

2,500Btu/Ft.3(26kW/m3)2,500Btu/Ft.3(26kW/m3)

c.

3,200Btu/Ft.3(33kW/m<sup>3</sup>)3,200Btu/Ft.3(33kW/m<sup>3</sup>)

d.

500Btu/Ft.3(5.17kW/m<sup>3</sup>)500Btu/Ft.3(5.17kW/m<sup>3</sup>)

Feedback

Your answer is correct.

The correct answer is: 1,000Btu/Ft.3(10.35kW/m<sup>3</sup>)1,000Btu/Ft.3(10.35kW/m<sup>3</sup>)

#### Question 28

##### Question text

The specific gravity of a gas is the:

Select one:

a.

weight of a gas as compared to an equal volume of air

b.

heat in the gas

c.

weight of a gas as compared to an equal volume of water

d.

volume of the gas

Feedback

Your answer is incorrect.

The correct answer is: weight of a gas as compared to an equal volume of air

[Skip to main content](#)

**Question text**

How much Methane does Natural gas contain as a percentage ( % ) ?

Select one:

a.

80 to 95 %

b.

50 to 60%

c.

60 to 70 %

d.

100%

**Feedback**

Your answer is correct.

The correct answer is: 80 to 95 %

**Question text**

Is natural gas in its pure state a toxic gas? (type yes or no) Answer

no

**Feedback**

The correct answer is: No

**Question 3**

**Question text**

For the following questions you can type in the chemical formulas as follows (eg water = H<sub>2</sub>O) do not include spaces in your answers.

List the chemical formula for Natural Gas. Answer

ch4

**Feedback**

The correct answer is: CH<sub>4</sub>

Question text

List the chemical formula for Propane. Answer

Feedback

The correct answer is: C3H8

Question text

List the chemical formula for Butane. Answer

Feedback

The correct answer is: C4H10

Question text

List the chemical formula for Carbon monoxide. Answer

Feedback

The correct answer is: CO

Question text

List the chemical formula for Carbon dioxide. Answer

Feedback

The correct answer is: CO2

Question text

List the chemical formula for Methane. Answer

Feedback

The correct answer is: CH4

Question text

List the chemical formula for Oxygen. Answer

Feedback

The correct answer is: O2

Question text

The ratio of the weight of a given volume of gas to the weight of an equal volume of air measured at standard temperature and pressure (60°F @ 14.73 Psi or 15°C @ 101.325 kPa). This is a description of...

Select one:

a.

Relative Heat

b.

Weight of a substance compared to the density of Hg

c.

Relative Volume

d.

Relative Density

#### Feedback

Your answer is incorrect.

The correct answer is: Relative Density

#### Question 11

##### Question text

The total heat energy produced when a given volume of fuel is subjected to combustion.

Select one:

a.

Specific Heat

b.

Calorific Capacity

c.

Heating Value

d.

Combustion Capacity

#### Feedback

Your answer is incorrect.

The correct answer is: Heating Value

### Question text

When one cubic foot of natural gas is burned it will produce Answer  British Thermal Units.

### Feedback

The correct answer is: 1000

### Question 13

#### Question text

Having any lesser amount of fuel than the lower flammable limit, a mixture would be Answer  and would not burn.

### Feedback

The correct answer is: lean

### Question text

Which of the following is used to odourize natural gas?

Select one:

a.

Sulphur

b.

Citric Acid

c.

Onion Oil

d.

Mercaptan

### Feedback

Your answer is incorrect.

The correct answer is: Mercaptan

### Question text

Natural gas must be readily detectable when \_\_\_\_\_ of the fuel gas per volume is present.

Select one:

a.

less than 10%

b.

more than 10%

c.

less than 1%

d.

any amount

#### Feedback

Your answer is incorrect.

The correct answer is: less than 1%

#### Question text

At standard atmospheric pressure, 14.73 Psi (101.325 kPa), the boiling point of propane is Answer  . Answer in Fahrenheit as ###F (including the letter "F") .

#### Feedback

-44 F

or

-42 C

The correct answer is: -44F

#### Question text

Fuel gases are usually transported and stored in liquid state rather than as a gas due to the following:

(C3H8) 270 times more fuel can be stored in the same space.

(C4H10) 235 times more fuel can be stored in the same space.

Select one:

True

False

### Feedback

The correct answer is 'True'.

### Question text

The limits of flammability of propane gas in air are approximately:

Select one:

☒

a.

2.5% to 9.5%

☐

b.

4.6% to 14%

☐

c.

5% to 15.3%

☐

d.

10% to 45%

### Feedback

Your answer is correct.

The correct answer is: 2.5% to 9.5%

### Question text

Identify the limits of flammability for natural gas in air:

Select one:

☐

a.

6% to 12%

☐

b.

14% to 24%

☐

c.

4% to 10%

d.

4% to 14%

#### Feedback

Your answer is correct.

The correct answer is: 4% to 14%

#### Question text

Natural gas is composed mainly of:

Select one:

a.

propane

b.

butane

c.

methane

d.

carbon dioxide

#### Feedback

Your answer is correct.

The correct answer is: methane

#### Question text

The relative density of propane vapour is approximately:

Select one:

a.

1.5

b.

0.8

c.

0.6

d.

2.0

#### Feedback

Your answer is correct.

The correct answer is: 1.5

#### Question text

What is the calorific value of Butane gas?

Select one:

a.

1,200Btu/Ft.<sup>3</sup>(.352kW/Ft.<sup>3</sup>)1,200Btu/Ft.<sup>3</sup>(.352kW/Ft.<sup>3</sup>)

b.

1,050Btu/Ft.<sup>3</sup>(.308kW/Ft.<sup>3</sup>)1,050Btu/Ft.<sup>3</sup>(.308kW/Ft.<sup>3</sup>)

c.

3,200Btu/Ft.<sup>3</sup>(.938kW/Ft.<sup>3</sup>)3,200Btu/Ft.<sup>3</sup>(.938kW/Ft.<sup>3</sup>)

d.

2,500Btu/Ft.<sup>3</sup>(.733kW/Ft.<sup>3</sup>)2,500Btu/Ft.<sup>3</sup>(.733kW/Ft.<sup>3</sup>)

#### Feedback

Your answer is correct.

The correct answer is: 3,200Btu/Ft.<sup>3</sup>(.938kW/Ft.<sup>3</sup>)3,200Btu/Ft.<sup>3</sup>(.938kW/Ft.<sup>3</sup>)

**Question text**

The heat generated by the complete combustion of a unit of fuel is commonly referred to as its:

Select one:

☐

a.

distillation value

☐

b.

combustion value

☐

c.

flash value

☒

d.

calorific value

**Feedback**

Your answer is correct.

The correct answer is: calorific value

**Question text**

Which of the following gases has the highest calorific value?

Select one:

☐

a.

Natural Gas

☐

b.

Carbon monoxide

☒

c.

Butane

☐

d.

Propane

#### Feedback

Your answer is correct.

The correct answer is: Butane

#### Question text

Natural gas must be preheated to approximately \_\_\_\_\_ °F before it will ignite.

Select one:

☐

a.

3,500

☐

b.

212

☒

c.

1,200

☐

d.

1,000

#### Feedback

Your answer is correct.

The correct answer is: 1,200

#### Question text

The flame temperature of natural gas is approximately \_\_\_\_\_ °F.

Select one:

☐

a.

212

b.

1,000

c.

3,500

d.

1,200

#### Feedback

Your answer is incorrect.

The correct answer is: 3,500

#### Question text

The calorific value (heat value) of natural gas is approximately:

Select one:

a.

1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)

b.

2,500Btu/Ft.<sup>3</sup>(26kW/m<sup>3</sup>)2,500Btu/Ft.<sup>3</sup>(26kW/m<sup>3</sup>)

c.

3,200Btu/Ft.<sup>3</sup>(33kW/m<sup>3</sup>)3,200Btu/Ft.<sup>3</sup>(33kW/m<sup>3</sup>)

d.

500Btu/Ft.<sup>3</sup>(5.17kW/m<sup>3</sup>)500Btu/Ft.<sup>3</sup>(5.17kW/m<sup>3</sup>)

#### Feedback

Your answer is correct.

The correct answer is: 1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)1,000Btu/Ft.<sup>3</sup>(10.35kW/m<sup>3</sup>)

#### Question text

The specific gravity of a gas is the:

Select one:

☐

a.

weight of a gas as compared to an equal volume of air

☐

b.

heat in the gas

☐

c.

weight of a gas as compared to an equal volume of water

☒

d.

volume of the gas

#### Feedback

Your answer is incorrect.

The correct answer is: weight of a gas as compared to an equal volume of air

The major interruption in fuel supply could stop production and result in what?

Select one:

☐

a.

Minor economic losses

☐

b.

Major economic losses

☐

c.

Not a big deal

d.

Inconvenience

#### Feedback

Your answer is incorrect.

The correct answer is: Major economic losses

#### Question text

When is it practical to consider Bio-gas as a supplemental fuel source?

Select one:

a.

When supply exceeds demand

b.

When demand exceeds supply

c.

Bio-gas is hazardous and should never be used

d.

It is never practical

#### Feedback

Your answer is incorrect.

The correct answer is: When demand exceeds supply

#### Question text

When organic waste degrades what does it produce?

Select one:

a.

Water

☐

b.

Energy

☐

c.

Methane

☐

d.

Carbon Dioxide

### Feedback

Your answer is incorrect.

The correct answer is: Methane

### Question text

What is the process of bacteria digesting organic material referred to as?

Select one:

☐

a.

Energetic activity

☐

b.

Aerobic activity

☐

c.

Anaerobic digestion

☐

d.

Process Digestion

### Feedback

Your answer is incorrect.

The correct answer is: Anaerobic digestion

Question text

What is term used to describe separating methane from the bio-gas?

Select one:

☐

a.

Scrubbing

☐

b.

Manufacturing

☐

c.

Sweeping

☐

d.

Bleaching

Feedback

Your answer is incorrect.

The correct answer is: Scrubbing

Question text

Calculate the calorific value of a propane/air mixture with 65% propane.

Select one:

☐

a.

1 500 Btu/cubic foot

☐

b.

1 235 Btu/cubic foot

☐

c.

1 750 Btu/cubic foot

d.

1 625 Btu/cubic foot

#### Feedback

Your answer is incorrect.

The correct answer is: 1 625 Btu/cubic foot

#### Question 7

##### Question text

Calculate the specific gravity of a propane/air mixture with 65% propane.

Select one:

a.

1.342

b.

1.182

c.

1.338

d.

1.765

#### Feedback

Your answer is incorrect.

$(65/100 \times 1.52) + (35/100 \times 1) = 1.338$

The correct answer is: 1.338

Which type of gas meter would be suited for applications requiring a gas pressure rating of 300 or more PSIG?

Select one:

a.

Rotary meter

b.

Diaphragm meter

c.

Turbine meter

d.

All meters can easily handle 300 PSIG or more

### Feedback

Your answer is incorrect.

The correct answer is: Turbine meter

### Question text

Which type of gas meter is used mostly in residential markets?

Answer:

Diaphragm meter

### Feedback

Diaphragm or Bellows

The correct answer is: Diaphragm

### Question text

Which of the following is not a function of the gas meter ?

Select one:

a.

Measuring input to appliances within building

b.

Measuring Gas consumption

c.

Identifying leaks

d.

Measuring Gas pressure

### Feedback

Your answer is incorrect.

The correct answer is: Measuring Gas pressure

### Question text

If no appliances in the building are firing and the gas meter is moving what can be assumed ?

Select one:

a.

The line pressure regulator has been left on

b.

The gas meter is faulty

c.

The service regulator has failed

d.

There is a leak somewhere in the system

### Feedback

Your answer is incorrect.

The correct answer is: There is a leak somewhere in the system

### Question text

The main purpose of a gas meter is to:

Select one:

a.

measure and record the gas flow

b.

restrict the flow of gas to the system

c.

prevent excessive gas flow to the system

d.

test the system for leaks

#### Feedback

Your answer is correct.

The correct answer is: measure and record the gas flow

#### Question text

Bellows-type gas meters are installed on:

Select one:

a.

domestic and commercial systems

b.

domestic system only

c.

industrial and commercial system

d.

industrial systems only

#### Feedback

Your answer is correct.

The correct answer is: domestic and commercial systems

Question text

Diaphragm meters can typically service systems up to a maximum flow capacity of \_\_\_\_\_.

Select one:

☐

a.

15 000 CFH

☐

b.

1000 CFH

☒

c.

5000 CFH

☐

d.

1500 CFH

Feedback

Your answer is correct.

The correct answer is: 5000 CFH

Question 8

Question text

Test dials on meters can be used to do which of the following.

Select one:

☒

a.

To test for leaks in the system.

☐

b.

To test the meter for proper operation.

☐

c.

To monitor and record flow rate.

d.

To determine the amount of gas consumed over a large period of time.

#### Feedback

Your answer is correct.

The correct answer is: To test for leaks in the system.

What are the acceptable range limits when comparing CLOCKED inputs to the manufacturer's RATED inputs ?

Select one:

a.

+/- 20 %

b.

10 % under-fired / 0 % over-fired

c.

10 % over-fired / 0 % under-fired

d.

0 % over-fired / 0 % over-fired

#### Feedback

Your answer is correct.

The correct answer is: 10 % under-fired / 0 % over-fired

#### Question text

Which of the following is the low pressure clocking formula ?

Select one:

a.

$3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \text{clocked input}$

b.

$3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \text{rated input}$

c.

$\# \text{ sec / rev.} \times \text{test dial volume} \times \text{calorific value} / 3600 \text{ sec / hr}$

d.  
 $3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \# \text{ sec / rev.}$

#### Feedback

Your answer is incorrect.

The correct answer is:  $3600 \text{ secs / hr} \times \text{test dial volume} \times \text{calorific value} / \# \text{ sec / rev.}$

#### Question text

If a natural gas meter @ 7 inches water column pressure is used to clock an appliance and it takes 23 seconds for the 2 cubic foot test dial to make one revolution. What is the clocked input of this appliance if the calorific value of the gas is 1050 Btu's / feet<sup>3</sup> ? (To nearest whole number)

Answer:

#### Feedback

$3600 \text{ sec / hour} \div 23 \text{ sec / rev.} \times 2 \text{ feet}^3 \times 1050 \text{ Btu's}^3 / \text{feet}^3$

The correct answer is: 328696

#### Question text

The testing pressure and duration of the test for gas piping systems after appliances are connected is:

Select one:

a.  
50 psi for 10 minutes

b.  
normal working pressure for 24 hours

c.  
1/2 Psi for 10 minutes

d.  
normal working pressure for 10 minutes

#### Feedback

Your answer is correct.

B149.1 [6.22.3 (b & d)]

The correct answer is: normal working pressure for 10 minutes

#### Question text

A furnace fired on natural gas is clocked at 20 seconds for one revolution of a 0.05 cubic meter test dial. The pressure of the gas in the meter is 7 inches water column (1.74 kPa). Calorific value = 1,000 Btu/Ft.<sup>3</sup> (10.35 kW/m<sup>3</sup>). The correct input is closest to:

Select one:

☐

a.

93.15 Btu/h (0.027 kW)

☐

b.

9,000 Btu/h (2.63 kW)

☐

c.

320,000 Btu/h (93.6 kW)

☒

d.

90,000 Btu/h (26.4 kW)

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.hr} \cdot 20 \text{ sec.rev.} \times 0.05 \text{ m}^3 \text{ rev.} = 9 \text{ m}^3 \text{ hr}$   
 $9 \text{ m}^3 \text{ hr} \times 35,310 \text{ Btu m}^3 = 317,790 \text{ Btu hr}$

The correct answer is: 320,000 Btu/h (93.6 kW)

#### Question text

A 5 cubic foot test dial on a low pressure meter takes 30 seconds to make 1 complete revolution. The correct flow rate is closest to:

Select one:

☒

a.

600 cubic feet/hour (16.80 m<sup>3</sup>m<sup>3</sup> )

☐

b.

120 cubic feet/hour (3.36 m<sup>3</sup>m<sup>3</sup> )

☐

c.

30 cubic feet/hour (0.85 m<sup>3</sup>m<sup>3</sup> )

☐

d.

750 cubic feet/hour ( 21.24 m<sup>3</sup>m<sup>3</sup> )

#### Feedback

Your answer is correct.

$3,600 \text{ sec.hr} \cdot 30 \text{ sec.rev.} \times 5 \text{ ft.}^3 \text{ rev.} = 600 \text{ CFH}$   
 $3,600 \text{ sec.hr} \cdot 30 \text{ sec.rev.} \times 5 \text{ ft.}^3 \text{ rev.} = 600 \text{ CFH}$

The correct answer is: 600 cubic feet/hour (16.80 m<sup>3</sup>m<sup>3</sup> )

#### Question text

A low pressure meter set requires 32 seconds for a 0.05 m<sup>3</sup>m<sup>3</sup> test dial to make one revolution. The calorific value of the gas is 1,000 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup> . The closest correct input is:

Select one:

☐

a.  
582,000 Btu/h

☐

b.  
1,986,948 Btu/h

☐

c.  
199,000 Btu/h

☒

d.  
56,250 Btu/h

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.} \times \frac{32 \text{ sec.}}{1 \text{ rev.}} \times 0.05 \text{ m}^3 \text{ rev.} = 5.625 \text{ m}^3 \text{ hr.}$   
 $5.625 \text{ m}^3 \text{ hr.} \times 35,310 \text{ Btu/m}^3 = 198,619 \text{ Btu/h}$

The correct answer is: 199,000 Btu/h

#### Question text

A low pressure propane meter with a 1 cubic foot dial takes 25 seconds for a revolution. The correct input is closest to:

Select one:

☐

a.  
325,451 Btu/h (95.32 kW)

☐

b.  
403,200 Btu/h (118.09 kW)

☒

c.  
360,000 Btu/h (105.44 kW)

☐

d.  
151,200 btu/h (44.28 kW)

#### Feedback

Your answer is correct.

$3,600 \text{ sec.hr.} \times 1 \text{ ft.}^3 \text{ rev.} = 144 \text{ CFH}$   
 $3,600 \text{ sec.hr.} \times 25 \text{ sec.rev.} \times 1 \text{ ft.}^3 \text{ rev.} = 144 \text{ CFH}$   
 $144 \text{ CFH} \times 2,500 \text{ Btu ft.}^3 = 360,000 \text{ Btu/h}$

The correct answer is: 360,000 Btu/h (105.44 kW)

### Question text

A furnace rated at 250,000 Btu/h (73.23 kW) is fired on natural gas. The calorific value = 1,000 Btu ft.<sup>3</sup> (10.35 kWm<sup>3</sup>). How long will it take the 5 cubic foot test dial to make one complete revolution on this low pressure meter?

Select one:

a.  
180 seconds

b.  
18 seconds

c.  
100 seconds

d.  
72 seconds

### Feedback

Your answer is incorrect.

$\text{input} = 3,600 \text{ sec.hr.} \times \text{TD} \times \text{C.V.}$   
 $\text{input} = 3,600 \text{ sec.hr.} \times \text{TD} \times \text{C.V.}$

$\text{Tsec.rev.} = 3,600 \text{ sec.hr.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3$   
 $\text{Tsec.rev.} = 3,600 \text{ sec.hr.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3$

The correct answer is: 72 seconds

### Question text

Calculate the input for the following natural gas appliance:

- Calorific value of gas = 1,000 Btu ft.<sup>3</sup> ( 10.35 kWm<sup>3</sup> )
- Meter pressure = 7 inches water column (1.74 kPa)
- Manifold pressure = 5 inches water column (1.24 kPa)
- Local atmospheric pressure = 14.68 Psia
- Test dial = 1 Ft.<sup>3</sup>
- One revolution of the test dial takes 31.5 seconds

Select one:

a.  
115,428 Btu/h (33.81 kW)

b.  
114,285 Btu/h (33.47 kW)

c.  
119,999 Btu/h (35.15 kW)

d.  
116,129 Btu/h (34.01 kW)

#### Feedback

Your answer is correct.

$3,600 \text{ sec. rev.} \cdot 31.5 \text{ sec. rev.} \times 1 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 114,286 \text{ Btu h}$   
 $3,600 \text{ sec. rev.} \cdot 31.5 \text{ sec. rev.} \times 1 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 114,286 \text{ Btu h}$

The correct answer is: 114,285 Btu/h (33.47 kW)

#### Question text

The purpose of clocking a meter by a gas fitter is:

Select one:

a.  
solely used as a gas leak check

b.  
to check how much gas is consumed in a month for billing purposes

c.  
to see how long it takes the test dial to go around

d.  
to determine how much gas an appliance consumes per hour

#### Feedback

Your answer is correct.

The correct answer is: to determine how much gas an appliance consumes per hour

#### Question text

Determine the number of seconds for one revolution of a 2 cubic foot test dial if the input is 302,400 Btu/h, the meter pressure is 7 inches water column and the gas used has a calorific value of 1,050 Btu/Ft.<sup>3</sup> Btu/Ft.<sup>3</sup>.

Select one:

a.  
4 seconds

b.  
25 seconds

c.  
28.5 seconds

d.  
23.8 seconds

#### Feedback

Your answer is correct.

$3,600\text{sec.hr.} \times 2\text{ft.3rev.} \times 1,050\text{Btuft.3} = 302,400\text{Btuh} = 25\text{sec.}$   
 $3,600\text{sec.hr.} \times 2\text{ft.3rev.} \times 1,050\text{Btuft.3} = 302,400\text{Btuh} = 25\text{sec.}$

The correct answer is: 25 seconds

#### Question text

A furnace fired on propane is clocked at 22 seconds on a 0.5 Ft.3Ft.3 test dial. The meter is low pressure. Its input will be closest to:

Select one:

a.  
2,045,000 Btuh

b.  
82,000 Btuh

c.  
818,000 Btuh

d.  
204,545 Btuh

#### Feedback

Your answer is correct.

$3,600\text{sec.hr.} \times 22\text{sec.rev.} \times 0.5\text{ft.3rev.} \times 2,500\text{Btuft.3} = 204,545\text{Btuh}$   
 $3,600\text{sec.hr.} \times 22\text{sec.rev.} \times 0.5\text{ft.3rev.} \times 2,500\text{Btuft.3} = 204,545\text{Btuh}$

The correct answer is: 204,545 Btuh

#### Question text

A low pressure meter set measuring natural gas requires 32 seconds for a 1/2 cubic meter test dial to make one revolution. The correct input is closest to:

Select one:

a.  
56.25 kW

b.  
582 kW

c.  
56,250 kW

d.  
582 Btuh

#### Feedback

Your answer is incorrect.

$3,600 \frac{\text{sec}}{\text{hr}} \cdot 32 \frac{\text{sec}}{\text{rev}} \times 0.5 \frac{\text{m}^3}{\text{rev}} = 56.25 \frac{\text{m}^3}{\text{hr}}$   
 $3,600 \frac{\text{sec}}{\text{hr}} \cdot 32 \frac{\text{sec}}{\text{rev}} \times 0.5 \frac{\text{m}^3}{\text{rev}} = 56.25 \frac{\text{m}^3}{\text{hr}}$   
 $56.25 \frac{\text{m}^3}{\text{hr}} \times 10.35 \frac{\text{kWh}}{\text{m}^3} = 582.188 \frac{\text{kWh}}{\text{hr}}$   
 $56.25 \frac{\text{m}^3}{\text{hr}} \times 10.35 \frac{\text{kWh}}{\text{m}^3} = 582.188 \frac{\text{kWh}}{\text{hr}}$

The correct answer is: 582 kW

#### Question text

After replacing a hot water tank rated at 36,000 Btuh, the gas fitter must clock it. However, the furnace must stay on throughout the clocking procedure. Clocking only the furnace (rated at 120,000 Btuh), the test dial takes 150 seconds for one revolution (5 Ft.3Ft.3 test dial). With both units firing, the time per revolution drops to 116 seconds. Using natural gas, if the meter is a low-pressure meter, we can conclude that:

Select one:

a.  
the hot water tank is overfired

b.  
both units are underfired

c.  
the installation is acceptable

d.  
the furnace is overfired

#### Feedback

Your answer is incorrect.

( Both Appliances

)  $3,600 \text{ sec.hr.} \cdot 116 \text{ sec.rev.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 155,172 \text{ Btuh}$   
 $3,600 \text{ sec.hr.} \cdot 116 \text{ sec.rev.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 155,172 \text{ Btuh}$

( Furnace

)  $3,600 \text{ sec.hr.} \cdot 150 \text{ sec.rev.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 120,000 \text{ Btuh}$   
 $3,600 \text{ sec.hr.} \cdot 150 \text{ sec.rev.} \times 5 \text{ ft.}^3 \text{ rev.} \times 1,000 \text{ Btu ft.}^3 = 120,000 \text{ Btuh}$

(Hot Water

Tank)  $155,172 \text{ Btuh} - 120,000 \text{ Btuh} = 35,172 \text{ Btuh}$   
 $155,172 \text{ Btuh} - 120,000 \text{ Btuh} = 35,172 \text{ Btuh}$

The correct answer is: the installation is acceptable

### Question text

An appliance fired on low pressure natural gas takes 27 seconds for one revolution of a 0.05 m<sup>3</sup> test dial. Its input will be closest to:

Select one:

a.  
6.67 kW

b.  
13.24 kW

c.  
235,000 Btuh

d.  
167,000 Btuh

### Feedback

Your answer is incorrect.

$3,600 \text{ sec.hr.} \cdot 27 \text{ sec.rev.} \times 0.05 \text{ m}^3 \text{ rev.} \times 35,310 \text{ Btu m}^3 = 235,400 \text{ Btuh}$   
 $3,600 \text{ sec.hr.} \cdot 27 \text{ sec.rev.} \times 0.05 \text{ m}^3 \text{ rev.} \times 35,310 \text{ Btu m}^3 = 235,400 \text{ Btuh}$

The correct answer is: 235,000 Btuh

### Question text

A furnace is certified to operate on propane with an input of 375,000 Btu/h at 10 inches water column. The gas has a calorific value of 2,500 Btu/Ft.<sup>3</sup> Btu/Ft.<sup>3</sup>. With the furnace operating, the meter is clocked and it takes 30 seconds for the 1 cubic foot test dial to make one complete revolution. From this, you can conclude that the appliance is:

Select one:

a.  
firing at the correct input

- b.  
overfired by 20%
- ☐
- c.  
underfired by 20%
- ☐
- d.  
underfired by 80%

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec.hr.} \cdot 30 \text{ sec.rev.} \times 1 \text{ ft.} \cdot 3 \text{ rev.} \times 2,500 \text{ Btuft.} = 3,600 \text{ sec.hr.} \cdot 30 \text{ sec.rev.} \times 1 \text{ ft.} \cdot 3 \text{ rev.} \times 2,500 \text{ Btuft.} = 300,000 \text{ Btuh}$   
 $300,000 \text{ Btuh} / 375,000 \text{ Btuh} = 80\%$

Which of the following is the pressure correction factor formula?

Select one:

- ☒ a.  
 $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$
- ☐ b.  
 $PCF = \frac{\text{Meter Pressure} \times \text{Absolute Pressure at Sea Level}}{\text{Absolute Pressure}}$
- ☐ c.  
 $PCF = \frac{\text{Meter Pressure} \times \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$
- ☐ d.  
 $PCF = \frac{\text{Meter Pressure} + \text{Standard Pressure}}{\text{Local Atmospheric Pressure}}$

#### Feedback

Your answer is correct.

The correct answer

is:  $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

#### Question text

Which of the following is the temperature correction factor formula?

Select one:

- ☐ a.

$TCF = \frac{GasTemp + 460(273)}{StandardTemp + 460(273)}$   $TCF = \frac{GasTemp + 460(273)}{StandardTemp + 460(273)}$

☐

b.

$TCF = \frac{StandardTemp + 460(273)}{StandardPressure + 14.73}$   $TCF = \frac{StandardTemp + 460(273)}{StandardPressure + 14.73}$

☐

c.

$TCF = \frac{StandardPressure + 14.73}{StandardTemp + 460(273)}$   $TCF = \frac{StandardPressure + 14.73}{StandardTemp + 460(273)}$

☒

d.

$TCF = \frac{StandardTemp + 460(273)}{GasTemp + 460(273)}$   $TCF = \frac{StandardTemp + 460(273)}{GasTemp + 460(273)}$

#### Feedback

Your answer is correct.

The correct answer

is:  $TCF = \frac{StandardTemp + 460(273)}{GasTemp + 460(273)}$   $TCF = \frac{StandardTemp + 460(273)}{GasTemp + 460(273)}$

#### Question text

Simply stated, Boyle's Law says that if the pressure exerted upon a gas increases, its volume will Answer .

#### Feedback

The correct answer is: decrease

Flag question

#### Question text

Simply stated, Charles' Law says that if the temperature exerted upon a gas increases, its volume will Answer .

#### Feedback

The correct answer is: increase

#### Question text

Which type of meter has the correction factor stamped on a brass tag attached to the meter? Answer .

#### Feedback

The correct answer is: Pressure Factor Measurement

#### Question text

Click the input using the following information:

- Test Dial = 5 Ft.<sup>3</sup>Ft.<sup>3</sup>
- Time for One Revolution = 15 seconds
- Gas = Natural
- Local Atmospheric Pressure = 14.28 Psi
- Meter Pressure = 10 Psi

Input = Answer  Btuh

#### Feedback

input

$$= 3,600 \text{sec.hr.} \cdot 15 \text{sec.rev.} \times 5 \text{ft.}^3 \text{rev.} \times (10 \text{Psi} + 14.28 \text{Psi} \cdot 14.73 \text{Psia}) \times 1,000 \text{Btuft.}^3$$
$$3,600 \text{sec.hr.} \cdot 15 \text{sec.rev.} \times 5 \text{ft.}^3 \text{rev.} \times (10 \text{Psi} + 14.28 \text{Psi} \cdot 14.73 \text{Psia}) \times 1,000 \text{Btuft.}^3$$

The correct answer is: 1977600

#### Question text

Determine the input to the appliance if:

- Seconds per revolution = 17
- Gas temperature = 22°F
- Test dial = 5 Ft.<sup>3</sup>Ft.<sup>3</sup>
- Gas = Natural
- Local Atmospheric Pressure = 14.56 Psi
- Meter Pressure = 20 Psi
- Meter not temperature compensated

Input = Answer  Btuh

#### Feedback

Input

$$= 3,600 \text{sec.hr.} \cdot 17 \text{sec.rev.} \times 5 \text{ft.}^3 \text{hr.} \times (20 \text{Psi} + 14.56 \text{Psi} \cdot 14.73 \text{Psia}) \times (60 \text{F} + 460 \cdot 22 \text{F} + 460) \times 1,000 \text{Btuft.}^3$$
$$3,600 \text{sec.hr.} \cdot 17 \text{sec.} \cdot \text{rev.} \times 5 \text{ft.}^3 \text{hr.} \times (20 \text{Psi} + 14.56 \text{Psi} \cdot 14.73 \text{Psia}) \times (60 \text{F} + 460 \cdot 22 \text{F} + 460) \times 1,000 \text{Btuft.}^3$$

The correct answer is: 2680236

#### Question text

Given a closed container in which there is 16 cubic feet of air at 35 Psig, what will the volume of air be if water is forced into the container until the pressure becomes 105 Psig?

V<sub>2</sub>V<sub>2</sub> = Answer  ft.<sup>3</sup>ft.<sup>3</sup>

#### Feedback

$$V_2 = V_1 P_1 P_2 V_2 = V_1 P_1 P_2$$

$$V_2 = 16 \text{ft.}^3 \times (35 \text{Psi} + 14.73 \text{psi}) (105 \text{psi} + 14.73 \text{psi}) V_2 = 16 \text{ft.}^3 \times (35 \text{Psi} + 14.73 \text{psi}) (105 \text{psi} + 14.73 \text{psi})$$

The correct answer is: 6.65

#### Question text

What will the volume be if the 920 cubic inches of gas is cooled from 16°C to -7°C ? (to 2 decimals)

V<sub>2</sub>V<sub>2</sub> = Answer  in.<sup>3</sup>

#### Feedback

$$V_2 = V_1 T_2 T_1 \quad V_2 = V_1 T_2 T_1$$

$$V_2 = 920 \text{ in.}^3 \times (-7^\circ\text{C} + 273) / (16^\circ\text{C} + 273) \quad V_2 = 920 \text{ in.}^3 \times (-7^\circ\text{C} + 273) / (16^\circ\text{C} + 273)$$

The correct answer is: 846.78

#### Question text

If 310 cubic feet of oxygen is under a pressure of 50 Psig, to what gauge pressure must the gas be compressed so that it fits into a 15 cubic foot cylinder? (to 2 decimals)

P<sub>2</sub>P<sub>2</sub> = Answer  psig

#### Feedback

$$P_2 = V_1 P_1 V_2 \quad P_2 = V_1 P_1 V_2$$

$$P_2 = 310 \text{ ft.}^3 \times (50 \text{ psig} + 14.73 \text{ psi}) / 15 \text{ ft.}^3 \quad P_2 = 310 \text{ ft.}^3 \times (50 \text{ psig} + 14.73 \text{ psi}) / 15 \text{ ft.}^3$$

$$P_2 = 1,337.75 \text{ psia} - 14.73 \text{ psi} \quad P_2 = 1,337.75 \text{ psia} - 14.73 \text{ psi}$$

The correct answer is: 1323.02

#### Question text

An 8 cubic foot air chamber at 40 Psig is released into the atmosphere. What volume will the released air have? (to 2 decimals)

V<sub>2</sub>V<sub>2</sub> Answer  ft.<sup>3</sup>

#### Feedback

$$V_2 = V_1 P_1 P_2 \quad V_2 = V_1 P_1 P_2$$

$$V_2 = 8 \text{ ft.}^3 \times (40 \text{ psig} + 14.73 \text{ psi}) / 14.73 \text{ Psia} \quad V_2 = 8 \text{ ft.}^3 \times (40 \text{ psig} + 14.73 \text{ psi}) / 14.73 \text{ Psia}$$

The correct answer is: 29.72

#### Question text

A gas measures 920 cubic inches at 60°F. What is its volume at 93°F?

V<sub>2</sub>V<sub>2</sub> = Answer  in.<sup>3</sup>

#### Feedback

$$V_2 = V_1 T_2 T_1 \quad V_2 = V_1 T_2 T_1$$

$$V_2 = 920 \text{ in.}^3 \times (93^\circ\text{F} + 460) / (60^\circ\text{F} + 460) \quad V_2 = 920 \text{ in.}^3 \times (93^\circ\text{F} + 460) / (60^\circ\text{F} + 460)$$

The correct answer is: 978.38

#### Question text

Which of the following is the combined gas law formula?

Select one:

☐

a.

$$V_1 T_1 P_1 = V_2 T_2 P_2 \quad V_1 T_1 P_1 = V_2 T_2 P_2$$

☐

b.

$$V_1 P_1 T_1 = V_2 P_2 T_2 \quad V_1 P_1 T_1 = V_2 P_2 T_2$$

☒

c.

$$V_1 P_1 T_1 = V_2 P_2 T_2 \quad V_1 P_1 T_1 = V_2 P_2 T_2$$

☐

d.

$$T_1 P_1 V_1 = T_2 P_2 V_2 \quad T_1 P_1 V_1 = T_2 P_2 V_2$$

Feedback

Your answer is incorrect.

The correct answer is:  $V_1 P_1 T_1 = V_2 P_2 T_2$

Question text

All gases expand the same amount when heated one degree.

Select one:

☐

True

☒

False

Feedback

The correct answer is 'True'.

Question text

The test dials are timed on a gas meter that is recording a flow rate of gas at pressures more than 1/2 Psi (3.45 kPa). If no allowance is made for the compression of the gas because of the pressure, the volume of flow indicated by the test dials will:

Select one:

☒

a.

indicate the exact Btu input to the combustion chamber

☐

b.

indicate the unit is overfired

☐

c.

be the volume of fuel gas expressed in SCFH entering the combustion chamber

☐

d.

indicate the unit is underfired

### Feedback

Your answer is incorrect.

The correct answer is: indicate the unit is underfired

### Question text

The correction factor of 1.679 would be used for a system operating at:

Select one:

a.  
5 psig (34 kPa)

b.  
10 psig (70 kPa)

c.  
20 psig (140 kPa)

d.  
2 psig (14 kPa)

### Feedback

Your answer is incorrect.

$PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$   $PCF = \frac{\text{Meter Pressure} + \text{Local Atmospheric Pressure}}{\text{Standard Pressure}}$

$\text{Meter Pressure} = PCF \times \text{Standard Pressure} - \text{Local Atmospheric Pressure}$   $\text{Meter Pressure} = PCF \times \text{Standard Pressure} - \text{Local Atmospheric Pressure}$

$\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$   $\text{Meter Pressure} = 1.679 \times 14.73 \text{ psia} - 14.73 \text{ psia}$   
 $\text{Meter Pressure} = 10 \text{ psig}$   $\text{Meter Pressure} = 10 \text{ psig}$

The correct answer is: 10 psig (70 kPa)

### Question text

calculate the input to an appliance by using the following information:

- Local atmospheric pressure = 14.60 Psi
- Gas service line pressure = 60 Psig
- Gas pressure through the meter = 10 Psig
- House line pressure = 2 Psig
- Appliance manifold pressure = 5 inches water column
- Test dial = 0.05 m³/m³

Test dial completes one revolution in 1 minute. Calorific value of gas = 1,000 Btu/Ft.³ (10.35 kW/m³) (10.35 kW/m³). The correct input is closest to which one of the following?

Select one:

a.  
177,000 Btu/h (51.8 kW)

b.  
536,000 Btu/h (156.9 kW)

c.  
300,000 Btu/h (87.9 kW)

d.  
106,000 Btu/h (31 kW)

#### Feedback

Your answer is incorrect.

$3,600 \text{ sec/hr} \times 0.05 \text{ m}^3 \text{ rev} \times (10 \text{ psig} + 14.6 \text{ psi} \times 14.73 \text{ psia}) \times 35,310 \text{ Btu/m}^3 = 176,903 \text{ Btu/h}$   
 $3,600 \text{ sec/hr} \times 0.05 \text{ m}^3 \text{ rev} \times (10 \text{ psig} + 14.6 \text{ psi} \times 14.73 \text{ psia}) \times 35,310 \text{ Btu/m}^3 = 176,903 \text{ Btu/h}$

The correct answer is: 177,000 Btu/h (51.8 kW)

Marked out of 1.00

#### Question text

Calculate the clocked input to the following boiler. The boiler has a rated input of 1,000,000 Btu/h (292.2 kW). it has four burners and operates at a manifold pressure of 7 inches water column (1.74 kPa). The fuel is natural gas with a calorific value of 1,050 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup> ( 10.84 kW/m<sup>3</sup>kW/m<sup>3</sup> ). The building is at sea level (14.73 Psi) and is supplied with 5 Psig (34 kPa) at the meter. One revolution of the 0.1 m<sup>3</sup>m<sup>3</sup> test dial takes 26 seconds. The clocked input of the boiler is closest to which one of the following?

Select one:

a.  
520,000 Btu/h (152 kW)

b.  
688,000 Btu/h (201 kW)

c.  
490,000 Btu/h (143 kW)

d.  
750,000 Btu/h (220 kW)

#### Feedback

Your answer is incorrect.

$$3,600 \text{ sec.} / \text{hr.} \times 26 \text{ sec.} / \text{rev.} \times 0.1 \text{ m}^3 / \text{rev.} \times 35.31 \text{ ft.}^3 / \text{m}^3 \times (5 \text{ psig} + 14.73 \text{ psi} / 14.73 \text{ psia}) \times 1,050 \text{ Btu} / \text{ft.}^3 = 687,380 \text{ Btu} / \text{hr.}$$

$$26 \text{ sec.} / \text{rev.} \times 0.1 \text{ m}^3 / \text{rev.} \times 35.31 \text{ ft.}^3 / \text{m}^3 \times (5 \text{ psig} + 14.73 \text{ psi} / 14.73 \text{ psia}) \times 1,050 \text{ Btu} / \text{ft.}^3 = 687,380 \text{ Btu} / \text{hr.}$$

The correct answer is: 688,000 Btu/h (201 kW)

### Question text

Calculate the input to a burner that is fired on a 50% butane-air mixture if it takes 48 seconds for the 2 ft.<sup>3</sup>/rev. test dial to complete one revolution. The gas meter has an operating pressure of 5 Psig:

Select one:

☐

a.  
240,000 Btu/h

☐

b.  
480,000 Btu/h

☐

c.  
643,000 Btu/h

☐

d.  
321,000 Btu/h

### Feedback

Your answer is incorrect.

$$3,600 \text{ sec.} / \text{hr.} \times 48 \text{ sec.} / \text{rev.} \times 2 \text{ ft.}^3 / \text{rev.} \times (5 \text{ psig} + 14.73 \text{ psi} / 14.73 \text{ psia}) \times 1,600 \text{ Btu} / \text{ft.}^3 = 321,360 \text{ Btu} / \text{hr.}$$

$$48 \text{ sec.} / \text{rev.} \times 2 \text{ ft.}^3 / \text{rev.} \times (5 \text{ psig} + 14.73 \text{ psi} / 14.73 \text{ psia}) \times 1,600 \text{ Btu} / \text{ft.}^3 = 321,360 \text{ Btu} / \text{hr.}$$

The correct answer is: 321,000 Btu/h

### Question text

Determine the input to a appliance under the following conditions (choose the closest answer):

- Service pressure = 60 Psig
- Local atmospheric pressure = 13.38 Psi
- Seconds/revolution = 18
- Meter pressure = 5 psig
- manifold pressure = 7 inches water column
- Test dial = 0.05 m<sup>3</sup>/rev. m<sup>3</sup>/rev.
- Building line pressure = 2 Psig
- Truck in the driveway = Green
- Weather = Partly Cloudy
- Gas = 1,050 Btu/Ft.<sup>3</sup> Btu/Ft.<sup>3</sup>

Select one:

a.  
496,000 Btuh

b.  
463,000 Btuh

c.  
420,000 Btuh

d.  
131,000 Btuh

### Feedback

Your answer is incorrect.

$3,600 \frac{\text{sec}}{\text{hr}} \cdot 18 \frac{\text{sec}}{\text{rev}} \times 0.05 \frac{\text{m}^3}{\text{rev}} \times (5 \text{ Psig} + 13.38 \text{ Psi} + 14.73 \text{ Psia}) \times 35.31 \frac{\text{ft}^3}{\text{m}^3} \times 1,050 \frac{\text{Btu}}{\text{ft}^3} = 462,702 \text{ Btuh}$   
 $3,600 \frac{\text{sec}}{\text{hr}} \cdot 18 \frac{\text{sec}}{\text{rev}} \times 0.05 \frac{\text{m}^3}{\text{rev}} \times (5 \text{ Psig} + 13.38 \text{ Psi} + 14.73 \text{ Psia}) \times 35.31 \frac{\text{ft}^3}{\text{m}^3} \times 1,050 \frac{\text{Btu}}{\text{ft}^3} = 462,702 \text{ Btuh}$

The correct answer is: 463,000 Btuh

### Question text

Calculate the input (to the closest answer) using the following information:

- Service Pressure = 60 Psig
- Meter pressure = 5 Psig
- Manifold pressure = 3.5 inches water column
- Test dial size = (5 cubic ft )
- Seconds/revolution = 20
- Calorific value = 1,000 Btu/Ft.<sup>3</sup>

Select one:

a.  
1,205,000 Btuh

b.  
4,566,000 Btuh

c.  
6,300,000 Btuh

d.  
900,000 Btuh

### Feedback

Your answer is incorrect.

$$3,600 \text{ sec.} \times 20 \text{ sec. rev.} \times 5 \text{ ft.} \times 3 \text{ rev.} \times (5 \text{ Psi} + 14.73 \text{ Psi}) \times 1,000 \text{ Btu ft.}^3 = 1,205,100 \text{ Btu}$$

The correct answer is: 1,205,000 Btu

### Question text

An appliance is clocked on a 2 Psi meter set without correcting for the pressure. The result will be:

Select one:

☐

a.  
the appliance clocked input will be correct

☐

b.  
there is no need to clock any appliance if 2 Psi gas is used

☐

c.  
the appliance will appear to be overfired

☐

d.  
the appliance will appear to be underfired

### Feedback

Your answer is incorrect.

The correct answer is: the appliance will appear to be underfired

Which of the following is not a type of burner orifice ?

Select one:

☐

a.  
Adjustable

☐

b.  
Cap / Universal

☐

c.  
Fixed

☒

d.  
Modulating

### Feedback

Your answer is correct.

The correct answer is: Modulating

Question text

Which orifice would be used in a DUAL FUEL appliance (natural gas / propane ) ?

Select one:

☐

a.  
Fixed

☐

b.  
Modulating

☐

c.  
Cap / Universal

☒

d.  
Adjustable

Feedback

Your answer is incorrect.

The correct answer is: Cap / Universal

Question text

Referencing the multiplier table A.15 (B149.1 Gas Code )

What is the multiplier for air ?

Select one:

☐

a.  
Not listed

☐

b.  
1

☐

c.  
0.6

☒

d.  
0.775

Feedback

Your answer is correct.

The correct answer is: 0.775

Question text

What size orifices would be required to fire a 65000 BTUH (natural gas) furnace with 3 burners at 3 inches water column manifold pressure ?

Select one:

a.  
44

b.  
43

c.  
3/32 inch

d.  
42

#### Feedback

Your answer is correct.

$65000 / 1000 \div 3 \text{ burner} = 21.668 \text{ CFH} / \text{Per burner}$

$21.667 \text{ CFH} @ 3 \text{ inch WC} = 43 (20.76 \text{ CFH})$

The correct answer is: 43

#### Question text

Calculate the orifice flow rate and size for each of the following appliances fired on natural gas:

#### Question text

An appliance is found to have a #51 orifice installed in each of its 4 burners. If fired on propane at 11 in. w.c. pressure, what would the input be? Answer  Btuh

#### Feedback

Propane #51 @ 11" w.c. =  $13.37 \text{ CFH}_{\text{orifice}}$

$13.37 \text{ CFH}_{\text{orifice}} \times 4 \text{ Burners} \times 2,500 \text{ Btuft.}_3 = 133,700 \text{ Btuh}$

The correct answer is: 133700

#### Question text

To change the fuel on an appliance from natural gas to propane which of the following would be done ?

Select one:

- ☐ a.  
Install smaller orifices , increase manifold pressure
- ☒ b.  
Install larger orifice , increase manifold pressure
- ☐ c.  
Install smaller orifice , decrease manifold pressure
- ☐ d.  
Install larger orifice , decrease manifold pressure

#### Feedback

Your answer is incorrect.

The correct answer is: Install smaller orifices , increase manifold pressure

#### Question text

An appliance with 5 burners is using propane at 11 inches w.c. manifold pressure. The orifice size used is found to be a #50. What would the input to this appliance be? Answer

72950

Btuh

#### Feedback

Propane #50 @ 11" w.c. = 14.59CFHorifice

input = 14.59CFHorifice×5 Burners×2,500Btuft.3

The correct answer is: 182375

#### Question text

In the diagram below, the device shown is:

Select one:

☐

a.

a universal main burner orifice adjusted for natural gas operation

☐

b.

an insert type pilot orifice

☒

c.

a universal main burner orifice adjusted for propane operation

☐

d.

a spud type pilot orifice

#### Feedback

Your answer is correct.

The correct answer is: a universal main burner orifice adjusted for propane operation

#### Question text

If the cross-sectional area of an orifice is doubled, the flow rate will be increased by:

Select one:

☐

a.

half the original flow rate

☒

b.

twice the original flow rate

☐

c.

four times the original flow rate

☐

d.

eight times the original flow rate

#### Feedback

Your answer is correct.

The correct answer is: twice the original flow rate

#### Question text

A natural gas boiler is equipped with 20 burners and fires at a manifold pressure of 3.5 in. w.c. It is determined with the use of orifice drills that each orifice is a #50. The calorific value of gas burned is 1,070 Btu/Ft.<sup>3</sup>. The firing rate of the boiler will be closest to:

Select one:

- ☐ a.  
257,000 Btuh
- ☐ b.  
15,000 Btuh
- ☒ c.  
278,000 Btuh
- ☐ d.  
298,000 Btuh

#### Feedback

Your answer is incorrect.

Natural Gas #50 @ 3.5" w.c. = 13.87 CFH orifice

Input = 13.87 CFH orifice × 20 Burners × 1,070 Btu/ft.<sup>3</sup> = 298,000 Btu/h

The correct answer is: 298,000 Btuh

#### Question text

A Natural Gas appliance has a rated input of 140 MBH. If the appliance has four burners and operates at a manifold pressure of 7 inches water column, the correct orifice to fire the appliance to its rated input would be:

Select one:

- ☐ a.  
#41
- ☐ b.  
#42
- ☒ c.  
#43
- ☐ d.  
#13

#### Feedback

Your answer is correct.

$140,000 \text{ Btu/h} \div 4 \text{ Burners} = 35,000 \text{ Btu/h per burner}$   
 $35,000 \text{ Btu/h} \div 1,000 \text{ Btu/ft}^3 \times 7 \text{ w.c.} = 245 \text{ CFH}$   
 245 CFH @ 7" w.c. = # 43

The correct answer is: #43

#### Question text

An appliance equipped with three burners and using natural gas at 3.5 inches water column pressure, has a rated input of 300 MBH. Select the orifices required:

Select one:

a.  
#13

b.  
3/16"

c.  
#14

d.  
#12

#### Feedback

Your answer is correct.

$300,000 \text{ Btu/h} \div 3 \text{ burners} = 100,000 \text{ Btu/h}$   
 $100,000 \text{ Btu/h} \div 1,000 \text{ Btu/h} = 100 \text{ CFH}$   
 $100 \text{ CFH} \text{ @ } 3.5" \text{ w.c.} = 3/16"$

The correct answer is: 3/16"

#### Question text

A 375 MBH appliance which is operated on propane, has four burners fired at 11 inches water column manifold pressure. Select the orifices required:

Select one:

a.  
3/16"

b.  
#34

c.  
#54

d.  
1/8"

#### Feedback

Your answer is incorrect.

$375,000 \text{ Btu/h} \div 2,500 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 37.5 \text{ CFH/orifice}$

$37.5 \text{ CFH/orifice} @ 11" \text{ W.C.} = 37.5 \text{ CFH/orifice} @ 11" \text{ W.C.} = \#34$

The correct answer is: #34

#### Question text

Which orifice would have the highest flow rate?

Select one:

☐

a.  
#24 @ 4 inches water column

☒

b.  
#25 @ 4 inches water column

☐

c.  
#25 @ 3 inches water column

☐

d.  
#24 @ 3 inches water column

#### Feedback

Your answer is incorrect.

The correct answer is: #24 @ 4 inches water column

#### Question text

A propane-air mixture has a specific gravity of 1.3 and a calorific value of 1,250 Btu/Ft.<sup>3</sup>. If an appliance has a rated input of 200 MBH and has five burners operating on 4 inches water column manifold pressure, what is the required orifice size?

Select one:

☐

a.  
#45

☐

b.  
#38

☒

c.  
#31

☐

d.  
#33

### Feedback

Your answer is correct.

$200,000 \text{ Btuh} \div 1,250 \text{ Btuft.} \div 3 \div 5 \text{ Burners} = 32 \text{ CFHorifice}$   
 $200,000 \text{ Btuh} \div 1,250 \text{ Btuft.} \div 3 \div 5 \text{ Burners} = 32 \text{ CFHorifice}$   
 $32 \text{ CFHorifice} \div 0.68 (\text{multiplier for Sg. 1.3}) = 47.06 \text{ CFHorifice}$   
 $32 \text{ CFHorifice} \div 0.68 (\text{multiplier for Sg. 1.3}) = 47.06 \text{ CFHorifice}$   
 $47.06 \text{ CFHorifice} @ 4" \text{ W.C.} = 47.06 \text{ CFHorifice} @ 4" \text{ W.C.} = \#31$

The correct answer is: #31

### Question text

An appliance has a high altitude rating of 245,500 Btuh and a sea level rating of 337,750 Btuh. Match the calculated de-rated inputs to the given elevations if they were installed at these elevations.

9,600 Ft.      Answer 1  
337,750 Btuh

6,600 Ft.      Answer 2  
245,500 Btuh

2,100 Ft.      Answer 3  
216,040 Btuh

375 Ft.      Answer 4  
186,580 Btuh

### Feedback

Your answer is incorrect.

The correct answer is: 9,600 Ft. → 186,580 Btuh, 6,600 Ft. → 216,040 Btuh, 2,100 Ft. → 245,500 Btuh, 375 Ft. → 337,750 Btuh

### Question text

A boiler certified for high altitude is installed at an elevation of 5,500 feet. The rating plate indicates a sea level rating of 150,000 Btuh and a high altitude rating of 130,000 Btuh. The boiler should be adjusted to an input of:

Select one:

a.  
150,000 Btuh

b.  
130,000 Btuh

c.  
124,800 Btuh

d.

109,200 Btuh

Feedback

Your answer is incorrect.

$130,000 \text{ Btuh} - 4\% = 124,800 \text{ Btuh}$

The correct answer is: 124,800 Btuh

Question text

To double the gas flow through the orifice of an atmospheric burner, the manifold pressure shall be increased by:

Select one:

a.  
50%

b.  
four times

c.  
double

d.  
three times

Feedback

Your answer is incorrect.

$$Q = \Delta P \quad \text{---} \quad \sqrt{Q} = \Delta P$$

$$2^2 = \Delta P \quad 2^2 = \Delta P$$

$$4 = \Delta P \quad 4 = \Delta P$$

The correct answer is: four times

Question text

Find the orifice sizes required for the following appliances:

385,000 Btuh; Calorific Value = 1,050 Btu/Ft.<sup>3</sup> Btu/Ft.<sup>3</sup>; 5 Burners; Manifold Pressure = 3.5 inches water column; Specific Gravity = 0.6

Select one:

a.  
#21

b.  
#20

c.  
#22

d.  
#19

#### Feedback

Your answer is correct.

$385,000 \text{ Btu/h} \div 1,050 \text{ Btu/ft}^3 \div 5 \text{ Burners} = 73.333 \text{ CFH orifice}$   
 $385,000 \text{ Btu/h} \div 1,050 \text{ Btu/ft}^3 \div 5 \text{ Burners} = 73.333 \text{ CFH orifice}$

$73.333 \text{ CFH orifice} @ 3.5" \text{ w.c.} = 73.333 \text{ CFH orifice} @ 3.5" \text{ w.c.} = \#21$

The correct answer is: #21

#### Question text

225,000 Btu/h; Calorific Value = 1,350 Btu/Ft.<sup>3</sup>; 4 Burners; Manifold Pressure = 4 inches water column; Specific Gravity = 1.2

Select one:

a.  
#30

b.  
#31

c.  
#28

d.  
#29

#### Feedback

Your answer is correct.

$225,000 \text{ Btu/h} \div 1,350 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 41.667 \text{ CFH orifice}$   
 $225,000 \text{ Btu/h} \div 1,350 \text{ Btu/ft}^3 \div 4 \text{ Burners} = 41.667 \text{ CFH orifice}$

$41.667 \text{ CFH orifice} \div 0.707 (\text{multiplier for Sg.}) = 58.934 \text{ CFH orifice} @ " \text{ w.c.} = 41.667 \text{ CFH orifice} \div 0.707 (\text{multiplier for Sg.}) = 58.934 \text{ CFH orifice} @ " \text{ w.c.} = \#29$

The correct answer is: #29

#### Question text

1,300 MBH; Calorific Value = 985 Btu/Ft.<sup>3</sup>; 10 Burners; Manifold Pressure = 3 inches water column; Specific Gravity = 0.9

Select one:

a.  
C

b.  
B

c.  
D

d.  
E

#### Feedback

Your answer is correct.

$1,300,000 \text{ Btu/h} \div 985 \text{ Btu/ft}^3 \div 10 \text{ Burners} = 131.98 \text{ CFH orifice}$   
 $1,300,000 \text{ Btu/h} \div 985 \text{ Btu/ft}^3 \div 10 \text{ Burners} = 131.98 \text{ CFH orifice}$   
 $131.98 \text{ CFH orifice} \div 0.817 (\text{Multiplier for Sg.}) = 161.542 \text{ CFH orifice @ 3" w.c.} = "D"$   
 $131.98 \text{ CFH orifice} \div 0.817 (\text{Multiplier for Sg.}) = 161.542 \text{ CFH orifice @ 3" w.c.} = "D"$

The correct answer is: D

#### Question text

475,000 Btu/h; Calorific Value = 1,000 Btu/Ft.<sup>3</sup>; 8 Burners; Manifold Pressure = 3.5 inches water column; Specific Gravity = 0.6

Select one:

a.  
#29

b.  
#28

c.  
#27

d.  
#26

#### Feedback

Your answer is correct.

$475,000 \text{ Btu/h} \div 1,000 \text{ Btu/ft}^3 \div 8 \text{ Burners} = 59.375 \text{ CFH orifice @ 3.5" w.c.}$   
 $475,000 \text{ Btu/h} \div 1,000 \text{ Btu/ft}^3 \div 8 \text{ Burners} = 59.375 \text{ CFH orifice @ 3.5" w.c.} = \#27$

The correct answer is: #27

#### Question text

160,000 Btuh; Calorific Value = 1,250 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>; 4 Burners; Manifold Pressure = 5 inches water column; Specific Gravity = 0.8

Select one:

☐

a.  
#38

☒

b.  
#37

☐

c.  
#35

☐

d.  
#36

#### Feedback

Your answer is correct.

$160,000 \text{ Btuh} \div 1,250 \text{ Btu/Ft.}^3 \div 4 \text{ Burners} = 32 \text{ CFHorifice}$   
 $160,000 \text{ Btuh} \div 1,250 \text{ Btu/Ft.}^3 \div 4 \text{ Burners} = 32 \text{ CFHorifice}$   
 $32 \text{ CFHorifice} \div 0.867 (\text{Multiplier for Sg.}) = 36.909 \text{ CFHorifice @ 5" w.c.}$   
 $32 \text{ CFHorifice} \div 0.867 (\text{Multiplier for Sg.}) = 36.909 \text{ CFHorifice @ 5" w.c.} = \#37$

The correct answer is: #37

#### Question text

650,000 Btuh; Calorific Value = 1,070 Btu/Ft.<sup>3</sup>Btu/Ft.<sup>3</sup>; 6 Burners; Manifold Pressure = 3 inches water column; Specific Gravity = 0.8

Select one:

☐

a.  
#5

☐

b.  
#2

☒

c.  
#4

☐

d.  
#3

#### Feedback

Your answer is correct.

$650,000\text{Btu/h} \div 1,070\text{Btu/ft}^3 \div 6 \text{ Burners} = 101.246\text{CFH/orifice}$   
 $650,000\text{Btu/h} \div 1,070\text{Btu/ft}^3 \div 6 \text{ Burners} = 101.246\text{CFH/orifice}$

$101.246\text{CFH/orifice} \div 0.867(\text{Multiplier for Sg.}) = 116.778\text{CFH/orifice @ 3" w.c.}$   
 $101.246\text{CFH/orifice} \div 0.867(\text{Multiplier for Sg.}) = 116.778\text{CFH/orifice @ 3" w.c.}$

The correct answer is: #4

#### Question text

How much air could pass through a #40 orifice at 3.5 inches water column? Answer

271900

CFH/orifice

#### Feedback

#40 @ 3.5" w.c.

$= 27.19\text{CFH/orifice}(\text{Natural Gas}) \times 0.775(\text{Multiplier for Sg.}) = 21.07\text{CFH/orifice}$   
 $27.19\text{CFH/orifice}(\text{Natural Gas}) \times 0.775(\text{Multiplier for Sg.}) = 21.07\text{CFH/orifice}$

The correct answer is: 21.07

#### Question text

An appliance has a sea level rating of 250 MBH and a high altitude rating of 220 MBH. The rating plate specifies a manifold pressure of 3.5 inches water column. When you look in the combustion chamber, you notice 5 upshot multi-port burners. The fuel gas supplied to this appliance has a calorific value of 0.314 kW/ft.<sup>3</sup> and a specific gravity of 0.65. If you are installing this appliance at an elevation of 6,000 feet above sea level, what size of orifices would be required to fire the appliance to its rated input?

Select one:

a.  
#32

b.  
#31

c.  
#34

d.  
#33

#### Feedback

Your answer is incorrect.

$220,000\text{Btu/h} - 8\% = 202,400\text{Btu/h}$

$0.314\text{kW/ft}^3 \div 0.000293\text{kW/Btu} = 1,072\text{Btu/ft}^3$

$202,400\text{Btu/h} \div 1,072\text{Btu/ft}^3 \div 5 \text{ Burners} = 37.761\text{CFH/orifice}$   
 $202,400\text{Btu/h} \div 1,072\text{Btu/ft}^3 \div 5 \text{ Burners} = 37.761\text{CFH/orifice}$

$37.761 \text{ CFH orifice} \div 0.962 (\text{Multiplier for Sg.}) = 39.253 \text{ CFH orifice}$   
 $39.253 \text{ CFH orifice} @ 3.5" \text{ w.c.} = 39.253 \text{ CFH orifice} @ 3.5" \text{ w.c.} = \#32$

The correct answer is: #32

The drawing below is of a propane:

Select one:

a.

evacuation valve for large tanks

b.

valve with overfill protection device

c.

cylinder liquid withdrawal valve

d.

liquid withdrawal valve for a forklift

Feedback

Your answer is correct.

The correct answer is: valve with overfill protection device

#### Question text

The smallest size cylinder, known as a disposable type, is:

Select one:

a.

5 pounds

b.

10 pounds

c.

20 pounds

d.

1 pound

#### Feedback

Your answer is correct.

The correct answer is: 1 pound

#### Question text

What is the sum of all whole numbers from 1 to infinity?  $\sum_{n=1}^{\infty} n$

Select one:

a.

Cannot be determined

b.

-1/12

c.

$\infty$

d.

0

#### Feedback

Your answer is incorrect.

find the proof here if you're curious :

<https://www.youtube.com/watch?v=w-l6XTVZXww>

The correct answer is:  $-1/12$

#### Question text

The largest size cylinder is:

Select one:

a.

1,000 pounds

b.

500 pounds

c.

100 pounds

d.

250 pounds

#### Feedback

Your answer is incorrect.

The correct answer is: 500 pounds

#### Question text

Liquid propane capacity is listed on tanks in:

Select one:

a.

pounds of propane

b.

pounds for small tanks and gallons for big tanks

c.

pounds or gallons of propane on all tanks

d.

gallons of water capacity

### Feedback

Your answer is correct.

The correct answer is: gallons of water capacity

### Question **Question text**

The type of thread connection found on the outlet of a vapour service valve is:

Select one:

a.

POL

b.

NPT

c.

BSPT

d.

NPS

### Feedback

Your answer is correct.

The correct answer is: POL

### Question text

The relief valve start-to-discharge pressure for a cylinder is:

Select one:

☐

a.

312 Psig

☐

b.

420 Psig

☐

c.

250 Psig

☒

d.

375 Psig

### Feedback

Your answer is correct.

The correct answer is: 375 Psig

### Question text

A data plate with construction information is found attached to:

Select one:

☐

a.

cylinders and tanks

☐

b.

cylinders

☒

c.

tanks

d.

cylinders over 420 pounds capacity

#### Feedback

Your answer is correct.

The correct answer is: tanks

#### Question text

When calculating the *effective load* that an appliance will place on a propane container, which formula should be used?

Select one:

a.

Effective load = weight of propane X load factor

b.

Effective load = input X load factor

c.

Effective load = gallons of liquid propane X 91,500

d.

Effective load = Btu/H of input

#### Feedback

Your answer is correct.

The correct answer is: Effective load = input X load factor

#### Question text

Calculate the effective load on a propane container supplying a 100,000 Btu/h central heating furnace: Answer  Btuh

#### Feedback

100,000 Btuh x 0.5 = 50,000 Btuh

The correct answer is: 50000

**Question text**

Calculate the effective load on a propane storage container for a 50,000 Btu/h construction heater: Answer  Btu

**Feedback**

50,000 Btuh x 1 = 50,000 Btu

The correct answer is: 50000

**Question text**

A propane-fired furnace at 100,000 Btu/h and hot water tank at 40,000 Btu/h are connected to an above ground storage tank. If the lowest winter temperature in the area is 10°F, calculate the size of the propane storage tank required at 75% humidity: Answer  Gal. Tank

**Feedback**

Furnace 100,000 Btuh x 0.5 = 50,000 Btuh

Hot Water Tank 40,000 Btuh x 0.16 = 6,400 Btuh

Total = 56,400 Btuh

56,400 Btuh @ 10°F and 80% Humidity = 1,000 Gal. Tank

The correct answer is: 1000

The type of container usually considered portable would be a .

**Feedback**

Your answer is correct.

The correct answer is:

The type of container usually considered portable would be a [Cylinder].

**Question text**

A 20lb propane cylinder would hold Answer  pounds of liquid propane.

**Feedback**

The correct answer is: 20

**Question text**

The density of liquid propane is Answer  lbs / cubic foot.

**Feedback**

The correct answer is: 31.8

**Question text**

The  weight of a cylinder is the weight of an empty cylinder with valve.

**Feedback**

Your answer is incorrect.

The correct answer is:

The [Tare] weight of a cylinder is the weight of an empty cylinder with valve.

Question text

The  in a propane cylinder will vary widely with ambient temperature.

Feedback

Your answer is incorrect.

The correct answer is: The [Pressure] in a propane cylinder will vary widely with ambient temperature.

Question text

The pressure relief valve setting on a propane cylinder is typically Answer  psig.

Feedback

The correct answer is: 375

Question text

The maximum permitted fill level of a propane cylinder Answer  percent.

Feedback

The correct answer is: 80

Question text

At atmospheric pressure , propane is found in what physical state ?

Feedback

Your answer is incorrect.

The correct answer is:

At atmospheric pressure , propane is found in what physical state ? [Gas]

Question text

Vaporization of gas creates a natural \_\_\_\_\_ effect.

Select one:

a.

Refrigeration

b.

Vapourization

c.

Heating

d.

Condensing

#### Feedback

Your answer is incorrect.

The correct answer is: Refrigeration

#### Question text

What name is given to the connection that is utilized for vapor service applications ?

Select one:

a.

P.O.L

b.

C.S.A

c.

M.V.P

d.

L.O.P

#### Feedback

Your answer is correct.

The correct answer is: P.O.L

#### Question text

The  area of a container is the specific area that comes into contact with the LP gas liquid.

### Feedback

Your answer is correct.

The correct answer is:

The [Wetted] area of a container is the specific area that comes into contact with the LP gas liquid.

### Question text

The greater the wetter area the greater the  vaporization rate.

### Feedback

Your answer is incorrect.

The correct answer is:

The greater the wetter area the greater the [Liquid] vaporization rate.

### Question text

The largest portable LP gas container would be a Answer  pound cylinder.

### Feedback

The correct answer is: 500

Given a closed container in which there is 16 cubic feet of air at 35 PSIG, what will the volume of air be if water is forced into the container until the pressure becomes 105 PSIG?

Answer  cu.Ft

### Feedback

$V_1P_1 = V_2P_2$

$V_2 = (V_1P_1)/P_2$

$V_2 = (16 \times 49.73) / 119.73$

$V_2 = 6.646 \text{ cu.Ft}$

Don't forget all pressures must be entered as PSIA

The correct answer is: 6.646

Marked out of 1.00

### Question text

What will the volume be if 920 cubic inches of gas is cooled from 16C to -7C?

Answer  cu.in

### Feedback

$V_1/T_1 = V_2/T_2$

$V_2 = (V_1T_2) / T_1$

$V_2 = (920 \times 266) / 289$

$V_2 = 846.782 \text{ cu.in}$

The correct answer is: 846.782

#### Question text

If 310 cubic feet of oxygen is under a pressure of 50 PSIG, to what gauge pressure must the gas be compressed so that it fits into a 15 cubic foot cylinder?

Answer  PSIG

#### Feedback

$$V_1P_1 = V_2P_2$$

$$P_2 = (V_1P_1) / V_2$$

$$P_2 = (310 \times 64.73) / 15$$

$$P_2 = 1337.753 \text{ psia}$$

$$\text{PSIG} = \text{PSIA} - \text{Atmospheric Pressure}$$

$$\text{PSIG} = 1337.753 - 14.73$$

$$\text{PSIG} = 1323.023$$

The correct answer is: 1323.023

#### Question text

An 8 cubic foot air chamber at 40 PSIG is released into the atmosphere. What volume will the released air have?

Answer  cu.Ft

#### Feedback

$$V_1P_1 = V_2P_2$$

$$V_2 = (V_1P_1)/P_2$$

$$V_2 = (8 \times 54.73) / 14.73$$

$$V_2 = 29.724 \text{ cu.Ft}$$

Don't forget all pressures must be entered as PSIA

The correct answer is: 29.724

#### Question text

A gas measures 920 cubic inches at 60F. What is its volume at 93F?

Answer  cu.in

#### Feedback

$$V_1/T_1 = V_2/T_2$$

$$V_2 = (V_1T_2) / T_1$$

$$V_2 = (920 \times 553) / 520$$

$$V2 = 978.385 \text{ cu.in}$$

The correct answer is: 978.385

#### Question text

A compression tank in a hot water space heating system contains 4 cu.ft. at 5 PSIG. What will the pressure be when the air volume is 2 cu.ft.?

Answer  PSIG

#### Feedback

$$V1P1 = V2P2$$

$$P2 = (V1P1) / V2$$

$$P2 = (4 \times 19.73) / 2$$

$$P2 = 39.46 \text{ psia}$$

$$\text{PSIG} = \text{PSIA} - \text{Atmospheric Pressure}$$

$$\text{PSIG} = 39.46 - 14.73$$

$$\text{PSIG} = 24.73$$

The correct answer is: 24.73

#### Question text

Select Boyles Law:

Select one:

a.

$$V1P1 = V2P2$$

b.

$$P1/T1 = P2/T2$$

c.

$$V1/P1 = V2/T2$$

d.

$$V_1/T_1 = V_2/T_2$$

#### Feedback

Your answer is incorrect.

The correct answer is:  $V_1P_1 = V_2P_2$

#### Question text

Select Charles' Law I and II:

Select one or more:

☐

a.

$$V_1/P_1 = V_2/P_2$$

☐

b.

$$V_1/T_1 = V_2/T_2$$

☐

c.

$$T_1/P_1 = T_2/P_2$$

☐

d.

$$P_1/V_1 = P_2/V_2$$

☐

e.

$$P_1/T_1 = P_2/T_2$$

#### Feedback

Your answer is incorrect.

CL #1 -  $P_1/T_1 = P_2/T_2$

CL #2 -  $V_1/T_1 = V_2/T_2$

The correct answers are:  $P_1/T_1 = P_2/T_2$ ,  $V_1/T_1 = V_2/T_2$

#### Question text

All gases expand the same amount when heated one degree.

Select one:

☐ True

☐ False

#### Feedback

The correct answer is 'True'.

#### Question text

The smallest size cylinder, known as a disposable type, is:

Select one:

☐

a.

20 pounds

☐

b.

10 pounds

☐

c.

1 pound

☐

d.

5 pounds

#### Feedback

Your answer is incorrect.

The correct answer is: 1 pound

#### Question text

The largest size cylinder is:

Select one:

☐

a.

100 pounds

☐

b.

1,000 pounds

☐

c.

500 pounds

☐

d.

250 pounds

#### Feedback

Your answer is incorrect.

The correct answer is: 500 pounds

#### Question text

Liquid propane capacity is listed on tanks in:

Select one:

☐

a.

pounds for small tanks and gallons for big tanks

☐

b.

pounds or gallons of propane on all tanks

☐

c.

pounds of propane

☐

d.

gallons of water capacity

#### Feedback

Your answer is incorrect.

The correct answer is: gallons of water capacity

#### Question text

The type of thread connection found on the outlet of a vapour service valve is:

Select one:

a.

POL

b.

NPS

c.

BSPT

d.

NPT

#### Feedback

Your answer is incorrect.

The correct answer is: POL

#### Question text

The relief valve start-to-discharge pressure for a cylinder is:

Select one:

a.

250 psig

b.

420 psig

c.

375 psig

d.

312 psig

### Feedback

Your answer is incorrect.

The correct answer is: 375 psig

### Question text

A data plate with construction information is found attached to:

Select one:

☐

a.  
cylinders

☐

b.  
cylinders over 420 pounds capacity

☐

c.  
tanks

☐

d.  
cylinders and tanks

### Feedback

Your answer is incorrect.

The correct answer is: tanks

### Question text

When calculating the effective load that an appliance will place on a propane container, which formula should be used?

Select one:

☐

a.  
Effective load = weight of propane x load factor

☐

b.  
Effective load = Btu/h of input

c.

Effective load – gallons of liquid propane x 91,500

d.

Effective load = input x load factor

#### Feedback

Your answer is incorrect.

The correct answer is: Effective load = input x load factor

#### Question text

Calculate the effective load on a propane container of a 100,000 Btu/h domestic furnace:

Answer  Btuh

#### Feedback

Effective Load = 100,000 Btuh x 0.5 = 50,000 Btuh

The correct answer is: 50000

#### Question text

Calculate the effective load on a propane storage container of a 50,000 Btu/h construction heater:

Answer  Btuh

#### Feedback

Effective Load = 50,000 Btuh x 1 = 50,000 Btuh

The correct answer is: 50000

Referring to the tables in the text. A propane-fired furnace at 100,000 Btu/h and hot water tank at 40,000 Btu/h are connected to an above ground storage tank. If the lowest winter temperatures in the area are 10F, calculate the size of the propane storage tank required (at 70% humidity):

Answer  gallon tank

#### Feedback

100,000 Btuh x 0.5 = 50,000 Btuh

40,000 Btuh x 0.16 = 6,400 Btuh

Total = 56,400 Btuh

Table A-1 = 500 gallon tank

The correct answer is: 500

#### Question text

A storage type hot water tank rated at 35,000 Btu/h is designed to fire on low pressure natural gas (C.V. 1,050 Btu/cu.ft.). You clock the meter and find that it takes 50 seconds for one complete revolution of the 1/2 cubic foot test dial. This indicates that the appliance is:

Select one:

a.

over-firing and the orifice will have to be decreased in size

b.

under-fired and the orifice will have to be increased in size

c.

under-fired and the orifice will have to be decreased in size

d.

firing correctly and no adjustments are necessary

#### Feedback

Your answer is incorrect.

$$3600\text{sec/hr} \div 0.5\text{cu.Ft/rev} \times 1050\text{Btu/cu.Ft} = \mathbf{37800 \text{ Btuh}}$$

The correct answer is: over-firing and the orifice will have to be decreased in size

Determine the input under the following conditions:

- Natural gas @ 1000 Btu/ cu ft
- 1.5 minutes per revolution
- 0.01 cu m test dial
- 4 inch water column manifold pressure
- 5 psig meter pressure
- 60 psig service pressure
- 14.36 psia local atmospheric pressure
- 60 degree F ambient

Answer:

#### Feedback

$$\begin{aligned}\text{Input} &= 3600 \times \text{testdialsec/rev} \times \text{calorificvalue} \times \text{PCF} \\ &= 3600 \times 0.0190 \times 35310 \times 1.314\end{aligned}$$

The correct answer is: 18559

#### Question text

Calculate the flow rate given the following conditions : (convert to standard conditions)

- Service pressure - 60 psig
- Meter pressure - 5 psig
- Manifold pressure - 7 inch water column
- Size of test dial - 5 cu ft
- Time per revolution - 1.5 minutes

Answer:

#### Feedback

Flow Rate

$$= \frac{\text{secondperhour} \times \text{testdial} \times \text{secondsperrrevolution} \times \text{PCF}}{\text{secondperhour} \times \text{testdial} \times \text{secondsperrrevolution} \times \text{PCF}}$$
$$= \frac{3600 \times 590 \times 1.339}{3600 \times 590 \times 1.339}$$

The correct answer is: 267.8

#### Question 3

#### Question text

Calculate the input given the following conditions :

- Service pressure - 50 psig
- House pressure - 10 psig
- Meter pressure - 10 psig
- Test dial - 5 cu ft
- Time per revolution - 30 seconds
- Ambient temperature - 70 degree F
- Temperature of gas - 50 degree F
- Local barometric pressure - 14.69 psig

Calorific value - 1000 Btu/cu ft

Answer:

#### Feedback

Input =  $\left( \frac{3600 \times \text{test} \times \text{dial}}{\text{sec} \times \text{rev}} \right) \times \text{calorific} \times \text{value} \times \text{PCF} \times \text{TCF}$

$$\left( \frac{3600 \times 5 \times 30}{30 \times 1000} \right) \times 1.676 \times 1.020$$

The correct answer is: 1025712

### Question text

Calculate the time for one revolution of a 2 cu ft test dial given :

- Input - 1575 MBH
- Local barometric pressure - 14.25 psia
- Ambient temperature - 45 degree F
- Gas temperature - 50 degree F
- Calorific value of gas - 1050 Btu / cu ft
- Meter pressure - 10 psig

Answer:

### Feedback

inp stand for = input

Input

$$\begin{aligned} &= 3600 \times \text{testdialsec/rev} \times \text{calorificvalue} \times \text{PCF} \times \text{TCF} \\ \text{sec/rev} &= 3600 \times \text{testdialinp} \times \text{calorificvalue} \times \text{PCF} \times \text{TCF} \\ &= 3600 \times 21575000 \times 1050 \times 1.646 \times 1.019 \end{aligned}$$

The correct answer is: 8

While clocking a boiler, the 0.05 cu m test dial takes 24 seconds for one revolution. The system is being supplied with natural gas at a calorific value of 1025 Btu/ cu ft. The pressure through the meter is 35 kPa. what is the input to the appliance in btu's?

Answer:

### Feedback

$$\begin{aligned} \text{Input} &= 3600 \times \text{testdialsec/rev} \times \text{calorificvalue} \times \text{PCF} \\ &= 3600 \times 0.0524 \times 36193 \times 1.345 \end{aligned}$$

The correct answer is: 365097

[Flag question](#)

### Question text

A furnace is rated at 500 MBH and is fired on natural gas with a calorific value of 1000 Btu / cu ft. If you were to clock the 2 cu ft , how long would you expect the test dial to make one revolution? (assume low pressure).

Answer:

### Feedback

Input =  $\left( \frac{3600 \text{ sec}}{\text{test dial}} \right) \times \text{caloric value}$

sec / rev =  $\left( \frac{3600 \text{ sec}}{\text{test dial}} \right) \times \text{caloric value}$

sec / rev =  $\left( \frac{3600 \times 2}{500000} \right) \times 1000$

The correct answer is: 14.4

### Question 3 Question text

A viessmann vitrodens 200 wall-mounted condensing boiler is rated at 67 kW. Natural gas is supplied to the boiler at a calorific value of 1000 Btu/ cu ft. The manifold pressure is 3.5 inch water column and the pressure through the meter is 2 psi. It takes 19 seconds for the needle to go once around the 1 cu ft test dial. Is this unit overfired or underfired and by how much ?

## Boiler Input

Input =	Answer	Answer
	Btuh	

### Feedback

Input =  $3600 \times \text{test dial sec} \times \text{caloric value} \times \text{PCF}$   
 $= 3600 \times 119 \times 1000 \times 1.136$

### Question text

A john wood signature series commercial hot water tank is fired on propane with a calorific value of 0.738 kW/ ft. The 2 cu ft takes 80 seconds for one revolution through the 5 psi meter. What is the input to the boiler in kw/hr ?

Answer:

### Feedback

Input =  $3600 \times \text{test dial sec} / \text{rev} \times \text{caloric value} \times \text{PCF}$   
 $= 3600 \times 280 \times 0.738 \times 1.339$

The correct answer is: 89.94

What would the temperature correction factor be if the ambient temperature is 65 degree F and the temperature of the gas is 50 degree F.

Note : Temperature must be in absolute

Answer:

#### Feedback

$TCF = \frac{\text{standard temperature}}{\text{temperature of gas}}$   
 $= \frac{60+460}{50+460} = \frac{520}{510} = 1.019$

The correct answer is: 1.019

#### Question text

Calculate the input given the following conditions :

- House pressure - 5 psig
- Manifold pressure - 3.5 inches water column
- Service pressure - 60 psig
- Meter pressure - 5 psig
- Local barometric pressure - 14.69 psi
- Ambient temperature - 65 degree F
- Temperature of gas - 50 degree F
- Gas used - natural - 1000 Btus / cu ft
- Time for one revolution - 34 seconds
- Test dial - 2 cu ft

Answer:

#### Feedback

Input

$= \frac{3600 \times \text{test dial sec/rev} \times \text{calorific value} \times PCF \times TCF}{3600 \times \text{test dial sec/rev} \times \text{calorific value} \times PCF \times TCF}$   
 $= \frac{3600 \times 234 \times 1000 \times 1.337 \times 1.019}{3600 \times 234 \times 1000 \times 1.337 \times 1.019} = 288509$

The correct answer is: 288509

#### Question text

Calculate the number of seconds it takes for the 1 cu ft test dial to make one complete revolution given :

- Meter pressure - 2 psig
- Temperature of gas - 60 degree F
- Ambient temperature - 32 degree F
- Gas used - natural - 1050 Btus / cu ft
- Input of unit - 400 MBH

Answer:

### Feedback

Inp stands for input

Input =  $3600 \times \text{testdialsec/rev} \times \text{calorificvalue} \times \text{PCF}$

#sec/rev =  $3600 \times \text{testdialinp} \times \text{calorificvalue} \times \text{PCF}$

#sec/rev =  $3600 \times 1400000 \times 1050 \times 1.136$

The correct answer is: 10.74

### Question text

Calculate the input given the following conditions :

-Meter Pressure = 10"wc.

-Test Dial = 5 Cu. Ft.

-Gas Temperature = 50 F

-Ambient Temperature = 45 F

-Sec. Per Rev. = 45 Seconds

-Propane Gas = 2500 Btu's / Ft<sup>3</sup>

Answer:

### Feedback

Input =  $3600 \times \text{testdialsec/rev} \times \text{calorificvalue} \times \text{TCF}$

=  $3600 \times 545 \times 2500 \times 1.019$

The correct answer is: 1019000

Meter test dial - 2 cubic feet

Clocked time per revolution - 75 seconds

Gas used - natural gas at 0.293 kW per cubic foot

Meter gas pressure - 15 psig

Correction factor : Answer

Input : Answer

kW

**Feedback**

Correction factor =  $(14.73+15) / 14.73$

**Question text**

Meter test dial - 0.15 cubic meters

Clocked time per revolution - 25 seconds

Gas used - 10.35 kW per cubic meter

Meter gas pressure - 35 kPa

Correction Factor : Answer

Input : Answer

kW

**Feedback**

Correction Factor :  $101.325 + 35 / 101.325$

**Question text**

Meter test dial - 2.5 cubic meters

Clocked time per revolution - 25 seconds

Gas used - natural gas at 35310 Btu / cubic meter

Meter has pressure - 20 psig

Correction Factor : Answer

Input : Answer

Btuh

#### Feedback

$14.73 + 20 / 14.73$

#### Question text

Meter test dial - 1 cubic foot

Clocked time per revolution - 35 seconds

Gas used - propane at 2500 Btu per cubic foot

Meter gas pressure - 10 psig

Correction Factor : Answer

Input : Answer

Btuh

#### Feedback

$14.73 + 10 / 14.73$

State the length of time it will take for a one cubic foot test dial to make one revolution when clocking the input of a boiler rated at 225000 Btuh fired on CH<sub>4</sub>.

Answer:

#### Feedback

$T = \frac{3600 \text{ sec} \times 1 \times 1000 \text{ Btu/cuft}}{225000 \text{ BTUH}} = 16$

The correct answer is: 16

#### Question 2

Not answered

Marked out of 6.00

Flag question

### Question text

Calculate the input for the appliances below. The heating value is 1000 Btu/ cu ft. The installations are low pressure system at 7 inches water column.

## Input for the Appliances

Time per revolution	Test Dial Size	Calculated Input
10 Seconds	1 cubic foot	Answer  Btuh
18 Seconds	0.6 cubic foot	Answer  Btuh
1 Minute	2 cubic foot	Answer  Btuh
24 Seconds	1 cubic foot	Answer  Btuh
20 Seconds	0.5 cubic foot	Answer  Btuh
40 Seconds	0.2 cubic foot	Answer

## Input for the Appliances

Time per revolution	Test Dial Size	Calculated Input
		Btuh

### Question 3

Not answered  
Marked out of 1.00

Flag question

#### Question text

A boiler has a rated input of 43.95 kW/HR. Clock the appliance using the 1 cubic foot test dial which takes 25 seconds for 1 revolution on the low pressure meter use a heating value is 10.35 kW per cubic meter.

- How many cubic meters of fuel are being consumed ?

Answer

cu m per hour

#### Feedback

$$\frac{3600\text{sec/h}}{25\text{sec/rev}} \times 1\text{cuft/rev} = 144\text{ CFH}$$
$$= 144\text{ CFH} / 35.31\text{ cu ft / cu m}$$

#### Question text

- How many kW of fuel is this ? Answer      kW / H

### Feedback

$4.078 \text{ cu m / H} \times 10.35 \text{ kw / cu m} = 42.209 \text{ kW / H}$

The correct answer is: 42.209

### Question 5

#### Question text

- Is the unit over-fired or under-fired ?

Select one:

☐

a.  
Over fired

☐

b.  
Under fired

### Feedback

Your answer is incorrect.

Under fired but acceptable

The correct answer is: Under fired

#### Question text

A direct fired make up air heater has an input rating of 210000 Btuh. It has one burner with a 0.05 cubic meter test dial that takes 30 seconds for one revolution. Heating value is 1000 Btu / cubic foot.

- How many cubic feet of fuel are being consumed ?

Answer  CFH.

### Feedback

$\frac{3600\text{sec/H}}{30\text{sec/rev}} \times \frac{3600\text{sec/H}}{30\text{sec/rev}} \times 0.05 \text{ cu m / H}$

$6 \text{ cu m / h} \times 35.31 \text{ cu ft / cu m}$

The correct answer is: 211.86

#### Question text

- How many Btus of fuel is this ?

Answer  BTU H

### Feedback

$211.86 \text{ CFH} \times 1000 \text{ BTU / cu ft}$

The correct answer is: 211860

Question text

- Is the unit under fired or over fired ?

Select one:

a.  
Over fired

b.  
Under fired

Feedback

Your answer is incorrect.

The correct answer is: Over fired

Question text

Calculate the input for a furnace given the following information :

- It took 50 seconds for a 2 cubic foot test dial to complete one revolution
- The gas is flowing through the meter at a pressure of 5 psi
- The selling pressure is 7 inch water column (0.25 psi)
- The local atmospheric pressure is 14.7
- The heating value of the fuel gas is 1250 Btu per cubic foot

Answer:

Feedback

$$\frac{3600\text{sec}}{50\text{sec/rev}} \times 2\text{ cu ft / rev} \times \frac{5\text{psig} + 14.714.73}{5\text{psig} + 14.714.73} = 192.587\text{ CFH}$$

$$192.587\text{ CFH} \times 1250\text{ BTU / cu ft}$$

The correct answer is: 240733

Question text

Calculate the input (kW) for an appliance given the following information :

- It took 38 seconds for a 0.05 cubic meter test dial to complete one revolution
- The gas is flowing through the meter at a pressure of 35 kPa
- The selling pressure is 1.38 kPa
- The local atmospheric pressure is 101.325 kPa
- The heating value of the gas is 10.5 kW / cu meter

Answer:

Feedback

3600sec/H38sec/rev3600sec/H38sec/rev x 0.05 cu m / rev  
X 35kPa+101.325101.325kPa35kPa+101.325101.325kPa = 6.373 cu m /  
6.373 cu m / h x 10.5 kw/ cu m

The correct answer is: 66.917  
Your answer is incorrect.

The correct answer is: An appliance that operates with a non-positive vent static pressure with a flue loss not less than 17%. → Category 1 Appliance, That portion of the combustion air that is supplied for the intermediate and final stages of the combustion process and is supplied downstream from the point of ignition → Secondary Air, Acceptable to the authority having jurisdiction. → Approved, Air that is admitted to a space containing an appliance to replace air exhausted through a ventilation opening or by means of exfiltration. → Ventilation Air, The air required for satisfactory combustion of gas including excess air. → Combustion Air, That portion of the combustion air that is supplied to the combustion zone in excess of that which is theoretically required for complete combustion. → Excess Air, That part of a piping or tubing system that conveys gas from the main piping or tubing or header to an appliance or appliances. → Branch Line, That portion of the combustion air that is supplied for the initial stages of the combustion process and is supplied upstream of the point of combustion → Primary Air, The ambient air that is admitted to a venting system at the draft hood, draft diverter, or draft regulator. → Flue Gas Dilution Air, An appliance intended to supply hot liquid or vapor for space heating, processing, or power purposes → Boiler

Your answer is incorrect.

The correct answer is: A primarily vertical shaft that encloses at least one flue for conducting flue gases outdoors → Chimney, A mechanical draft produced by a device upstream from the combustion zone of an appliance → Forced Draft, A burner in which the combustion air is supplied by a mechanical device such as a fan or blower at sufficient pressure to overcome the resistance of the burner and the appliance → Forced-Draft Burner, A burner that is not equipped with a mechanical device for supplying combustion air. → Natural-Draft Burner, A draft control device intended to stabilize the natural draft in an appliance by admitting room air to the venting system. A double-acting draft regulator is one whose balancing damper is free to move in either direction. → Draft Regulator (Barometric Damper), A factory-fabricated flexible hose assembly and related fittings designed to convey gaseous fuel from a gas supply piping to the gas inlet to an appliance. → Gas Hose, A secondary structure (room) within or attached to a structure (building) in which an appliance(s) is installed. → Enclosure, Piping or tubing that, when in place in a wall, or ceiling of a finished building, is hidden from view and can only be exposed by use of a tool. It does not apply to piping or tubing that passes directly through a wall or partition. → Concealed Piping or Tubing, A mechanical draft produced by a device downstream from the combustion zone of an appliance → Induced Draft, Constituents resulting from the combustion of gas with oxygen of the air and includes inert gases, but excludes excess air → Combustion Products

The correct answer is:

Means a pilot flame supervised by a primary safety control which senses the presence of the pilot prior to gas being admitted to the main burner. → Proved Pilot, A source of ignition which continues to function during the entire period that the flame is present. → Intermittent Ignition, To replace the existing fluid (gaseous or liquid) in piping, tubing, equipment, a container or an appliance, with a desired fluid. → Purge, A heater which transfers heat from the source to the heated objects without heating the intervening air → Infrared Heater, A flame that is used to ignite a gas/air or propane/air mixture at the main burner or burners. → Pilot,

A source of ignition which ceases to function after the trial-for-ignition period. → Interrupted Ignition,

A pilot which is automatically lighted each time there is a call for heat and which is cut off automatically at the end of the trial-for-ignition of the main burner. → Interrupted Pilot,

A pilot that burns without turn down throughout the entire time the burner is in service, whether the main burner is firing or not. → Continuous Pilot,

A pilot which is automatically lighted each time there is a call for heat and burns during the entire period that the main burner is firing. → Intermittent Pilot, That portion of an appliance designed for the attachment of a draft hood, vent connector, or venting system → Flue Collar

Your answer is incorrect.

The correct answer is: That part of the venting system that conducts the flue gases from the flue collar of an appliance to a chimney or vent, and that may include a draft control device. → Vent Connector, An automatic valve that has a closing time of less than 5 seconds upon being de-energized. → Fast-Closing Valve, A pressure relief valve that is built into the body of the diaphragm assembly of a pressure regulator. → Internal Relief Valve, A valve that automatically shuts off the supply of gas when de-energized by a combustion safety control, safety limit control or loss of activating medium. → Safety Shut-off Valve, A system for the removal of flue gases to the outdoors by means of a chimney, vent connector, vent, or a natural or mechanical exhaust system. → Venting System, The combination of valves, controls, piping and tubing, of an appliance upstream from the manifold, through which gas is supplied to the appliance and by which gas is controlled. → Valve Train,

A device, either adjustable or non-adjustable, for controlling and maintaining, within acceptable limits, a uniform outlet pressure. → Pressure Regulator, A pressure regulator installed on a service line to control the pressure of the gas delivered to the customer. → Service Regulator, A regulator that is capable of maintaining a reduced outlet pressure when the fuel flow condition is static → Lock-up (Positive Shut-off) Regulator

Which Code governs the assembly or construction of an appliance subject to the authority having jurisdiction?

Select one:

a.

CSA B 149.3

b.

CSA B 149.1

c.

CSA B 149.4

d.

CSA B 149.2

#### Feedback

Your answer is incorrect.

B149.1 (4.2.3)

The correct answer is: CSA B 149.3

#### Question text

An appliance, accessory, component, equipment or material used in an installation shall be of a type and rating \_\_\_\_\_ for the specific purpose for which it is employed.

Select one:

a.

appropriate

b.

sized

c.

fit

d.

approved

**Feedback**

Your answer is incorrect.

B149.1 (4.2.1)

The correct answer is: approved

**Question text**

When a new appliance, certified for high altitude, is installed above 4,500 feet, what is the required input rating reduction?

Select one:

☐

a.

8 % for each additional 1,000 ft. (300 m)

☐

b.

4 % for each additional 1,000 ft. (300 m)

☐

c.

5 % for each additional 1,000 ft. (300 m)

☒

d.

2 % for each additional 1,000 ft. (300 m)

**Feedback**

Your answer is incorrect.

B149.1 (4.22.1)

The correct answer is: 4 % for each additional 1,000 ft. (300 m)

**Question text**

An appliance installed in a location where flammable vapor, combustible dust or fibers or an explosive mixture is present shall be:

Select one:

☐

a.

Purged with nitrogen

☐

b.

Sleeved

☒

c.

Certified for installation in a hazardous location

☐

d.

Wrapped in a fire proof coating

### Feedback

Your answer is correct.

B.149.1 (4.9.2)

The correct answer is: Certified for installation in a hazardous location

### Question text

In a storage garage, an appliance shall be installed so that a component capable of igniting a flammable vapor is located not less than \_\_\_\_\_ above the floor.

Select one:

☐

a.

16 inches (400 mm)

☐

b.

6 inches (150 mm)

☒

c.

18 inches (450 mm)

☐

d.

12 inches (300 mm)

### Feedback

Your answer is correct.

B149.1 (4.16.2)

The correct answer is: 18 inches (450 mm)

### Question text

When a conflict exists between the manufacturers' certified installation instructions and the B 149.1 gas code, which method shall be used?

Select one:

a.

home owner

b.

common sense

c.

code

d.

manufacturer

### Feedback

Your answer is incorrect.

B149.1 (4.1.4)

The correct answer is: code

### Question text

When an appliance is converted from the gas or fuel specified on the rating plate, the conversion shall be in accordance with:

Select one:

a.

The manufacturer's certified instructions

b.  
good engineering principles

☐

c.  
home owner's request

☐

d.  
gas fitter's experience

#### Feedback

Your answer is correct.

B149.1 (4.5.3)

The correct answer is: The manufacturer's certified instructions

#### Question text

Who determines if the installation of a used appliance is acceptable?

Select one:

☐

a.  
the gas inspector

☐

b.  
the certified installer

☒

c.  
the manufacturer

☐

d.  
the homeowner

#### Feedback

Your answer is incorrect.

B149.1 (4.5.6)

The correct answer is: the certified installer

Question text

In a repair garage, an appliance shall be installed so that a component capable of igniting a flammable vapor is located not less than \_\_\_\_\_ above the floor.

Select one:

a.

18 inches (450 mm)

b.

5 feet (1500 mm)

c.

4.5 ft. (1400 mm)

d.

36 inches (900 mm)

Feedback

Your answer is incorrect.

B149.1 (4.16.3)

The correct answer is: 4.5 ft. (1400 mm)

Question text

When an appliance is installed in an area where physical damage may be incurred, what is required?

Select one:

a.

it shall be protected from such damage

b.

it shall be labeled and identified "Danger, Gas Appliance"

c.

it shall not be installed in such a location

d.

it shall be in a framed mechanical room

#### Feedback

Your answer is incorrect.

B149.1 (4.23)

The correct answer is: it shall be protected from such damage

#### Question text

What shall be done to an appliance that has been converted from propane to natural gas?

a.

Purge the system with oxygen

b.

Adjust the input

c.

Mark the appliance rating plate with the change has been made

d.

Attach a tag on the gas meter

#### Feedback

Your answer is correct.

4.5

The correct answer is:

Mark the appliance rating plate with the change has been made

#### Question text

During the installation of a meter or a service regulator, the installer shall comply with which code?

a.

CSA Z.240

b.

CSA Z.7396

c.

CSA Z.662

d.

CSA Z.682

#### Feedback

Your answer is incorrect.

4.6

The correct answer is:

CSA Z.662

#### Question text

Which type of flashlight shall be used to check for gas leakage?

a.

Class 1 group B

b.

Class 1 group A

c.

Class 2 group A

d.

Class 2 group B

### Feedback

Your answer is incorrect.

4.12

The correct answer is: Class 1 group A

### Question text

Which type of protection is required to provide protection from a combustible material when the required clearance without protection is 34-inches, and the appliance is being installed in a location with only 21-inches on the side and back wall clearance from combustible material?

a.

28 Gauge Sheet Metal

b.

¼" Insulating Mill Board

c.

¼" Insulating Mill Board with Mineral Wool Batts

d.

22 Gauge Sheet Metal

### Feedback

Your answer is incorrect.

Table 4.1

The correct answer is:

22 Gauge Sheet Metal

### Question text

An access opening shall be provided to a space where an appliance is installed, and the opening shall be a minimum of:

a.

24" x 30"

b.

36" x 36"

c.

24" x 24"

d.

24" x 36"

#### Feedback

Your answer is incorrect.

4.14

The correct answer is:

24" x 30"

#### Question text

Where an appliance is installed on a roof, the clearance between the edge of the roof shall be:

a.

5'

b.

8'

c.

4'

d.

6'

### Feedback

Your answer is incorrect.

4.14

The correct answer is:

6'

### Question text

An appliance with an FVIR system installed in a storage garage shall have a minimum clearance above the floor of:

a.

4.5'

b.

No Clearance Required

c.

3'

d.

1.5'

### Feedback

Your answer is incorrect.

4.16

The correct answer is:

No Clearance Required

### Question text

What input shall an appliance certified for high-altitude installation be adjusted to, if the sea level rating is 120,000 BTUH and a high-altitude rating of 98,000 BTUH when installed at an elevation of 8,200 feet above sea level?

a.

72,675 BTUH

☐

b.

79,398 BTUH

☐

c.

86,204 BTUH

☐

d.

82,320 BTUH

#### Feedback

Your answer is incorrect.

4.22

The correct answer is:

82,320 BTUH

#### Question text

What is the maximum vapor pressure supplied into the piping or tubing system serving an appliance in a mobile home?

☐

a.

10" w.c.

☐

b.

11" w.c.

☐

c.

7" w.c.

☐

d.

13" w.c.

### Feedback

Your answer is incorrect.

4.25

The correct answer is:

13" w.c.

### Question text

A defective heat exchanger in a furnace installed in a dwelling unit shall be:

a.

Temporarily repaired

b.

Replaced

c.

Repaired

d.

Re-Calibrated

### Feedback

Your answer is incorrect.

4.21

The correct answer is:

Replaced

### Question text

Who shall ensure that the gas piping or tubing system is gas-tight at the completion of the test?

a.

Safety Officer

b.

Gas Contactor

c.

Installer

d.

Field Safety Representative

#### Feedback

Your answer is incorrect.

4.3

The correct answer is:

Installer

#### Question text

For the purpose of the B.149.1 which of the following gases does the code book not apply to?

a.

C<sub>4</sub>H<sub>10</sub>

b.

C<sub>2</sub>H<sub>2</sub>

c.

CH<sub>4</sub>

d.

C<sub>3</sub>H<sub>8</sub>

#### Feedback

Your answer is incorrect.

4.1

The correct answer is:

C2H2

#### Question text

Unless a greater distance is indicated on the appliance rating plate, what is the minimum service clearance to any side, top, or bottom where service could be necessary?

a.

30"

b.

24"

c.

36"

d.

48"

#### Feedback

Your answer is incorrect.

4.14

The correct answer is:

24"

#### Question text

What type of gas valve shall be used for an automatic fire-extinguishing system protecting an exhaust system to ensure the gas supply to the appliance and the pilot is automatically shut off?

a.

Automatic Electrically Operated Fast-Closing

b.

Automatic Seismic Valve

c.

Redundant Gas Valve

d.

Mechanical Electrical Fast-Closing Valve

### Feedback

Your answer is incorrect.

4.19

The correct answer is:

Automatic Electrically Operated Fast-Closing

Which of the following piping materials may not be used to run gas above ground.

Select one:

a.

Steel

b.

Plastic

c.

Copper

d.

CSST

### Feedback

Your answer is incorrect.

B149.1 (6.2.17)

The correct answer is: Plastic

**Question 2**

Not answered

Marked out of 1.00

Flag question

**Question text**

The maximum gas (natural and propane) pressure allowance for threaded schedule 40 steel pipe is \_\_\_\_\_ ( \_\_\_\_\_).

Select one:

☐

a.

Less than 250 (1725 kPa)

☐

b.

125 (860 kPa)

☐

c.

no limit on steel pipe

☐

d.

350 (2400 Kpa)

**Feedback**

Your answer is incorrect.

B149.1 (6.2.3)

The correct answer is: 125 (860 kPa)

**Question 3**

Not answered

Marked out of 1.00

Flag question

**Question text**

The maximum allowable pressure drop on a low pressure system shall not exceed:

Select one:

a.

.5 inch w.c. (125 Pa)

b.

1.5 inch w.c. (375 Pa)

c.

1 inch w.c. (250 Pa)

d.

2 inch w.c. (500Pa)

**Feedback**

Your answer is incorrect.

B149.1 Table 6.1

The correct answer is: 1 inch w.c. (250 Pa)

**Question 4**

Not answered

Marked out of 1.00

Flag question

**Question text**

Which of the following fittings are not included on tables A.16 and B.11 ?

Select one:

a.

tees

b.

couplings

c.

90's

d.

45's

#### Feedback

Your answer is incorrect.

B149.1 Tables A.16 and B.11

The correct answer is: couplings

#### Question 5

Marked out of 1.00

[Flag question](#)

#### Question text

What is the minimum size piping allowed to be installed in a concealed location?

Select one:

a.

0.5 inch NPS

b.

1.0 inch (NPS)

☐

c.

0.75 inch (NPS)

☐

d.

0.25 inch NPS

### Feedback

Your answer is incorrect.

B149.1 (6.3.9)

The correct answer is: 0.5 inch NPS

### Question 6

Not answered

Marked out of 1.00

Flag question

### Question text

What is the maximum spacing between supports for a horizontal 1 inch steel gas line?

Select one:

☐

a.

6 feet (2m)

☐

b.

10 feet (3m)

☐

c.

15 feet (5m)

d.

8 feet (2.5m)

### Feedback

Your answer is incorrect.

B149.1 (Table 6.2)

The correct answer is: 8 feet (2.5m)

### Question 7

Not answered

Marked out of 1.00

Flag question

### Question text

What type of joints are **not** permitted in steel piping?

Select one:

a.

threaded

b.

press-connected

c.

brazed

d.

flanged

### Feedback

Your answer is incorrect.

B149.1 (6.9.1)

The correct answer is: brazed

Question **8**

Not answered

Marked out of 1.00

Flag question

Question text

What is the maximum size gas piping that may be threaded?

Select one:

a.

2.5 inches

b.

1.5 inches

c.

2.0 inches

d.

1.25 inches

Feedback

Your answer is incorrect.

B149.1 (6.9.2)

The correct answer is: 2.0 inches

Question **9**

Not answered

Marked out of 1.00

Flag question

Question text

Which of the following statements is **not** true with regards to jointing sealant?

Select one:

a.

applied to male threads only

b.

tape must be pink

c.

first two starter threads must be left bare

d.

certified

Feedback

Your answer is incorrect.

B149.1 (6.9.6)

The correct answer is: tape must be pink

Question **10**

Not answered

Marked out of 1.00

### Question text

What is the minimum diameter of an underground gas line?

Select one:

a.

1/2 inch

b.

3/4 inch

☐

c.

1 inch

☐

d.

1 1/4 inches

### Feedback

Your answer is incorrect.

B149.1 (6.15.1)

The correct answer is: 1/2 inch

### Question **12**

Not answered

Marked out of 1.00

[Flag question](#)

### Question text

What is the maximum length for a hose connection in a permanent installation?

Select one:

☐

a.

10 feet (3 m)

☐

b.

15 feet (4.6 m)

☐

c.

no maximum

d.

30 feet (9.5 m)

### Feedback

Your answer is incorrect.

B149.1 [6.20.3(a)]

The correct answer is: 10 feet (3 m)

### Question 13

Not answered

Marked out of 1.00

Flag question

### Question text

What is the minimum diameter of test gauge that may be used in a pressure test on gas piping?

Select one:

a.

2 inches (50 mm)

b.

1.5 inches (38 mm)

c.

3 inches (75 mm)

d.

2.5 inches (63 mm)

### Feedback

Your answer is incorrect.

B149.1 [6.22.2(b)]

The correct answer is: 3 inches (75 mm)

Question **14**

Marked out of 1.00

Flag question

Question text

What is the required test pressure and duration for a 250 foot / 2 psi gas system?

Select one:

☐

a.

50 psi / 60 min

☐

b.

15 psi / 15 min

☐

c.

50 psi / 180 min

☐

d.

15 psi / 60 min

Feedback

Your answer is incorrect.

B149.1 (Table 6.3)

The correct answer is: 15 psi / 60 min

Question **15**

Not answered

Marked out of 1.00

Flag question

### Question text

What is the maximum operating pressure for a "container supplied" propane system?

Select one:

a.

375 psi

b.

250 psi

c.

test on propane "container supplied" systems not required

d.

350 psi

### Feedback

Your answer is incorrect.

B149.1 [Table 6.3 (footnote a)]

The correct answer is: 250 psi

### Question **16**

Not answered

Marked out of 1.00

Flag question

Question text

Which of the following must accompany an underground plastic gas piping installation?

Select one:

☐

a.

below ground tracing wire

☐

b.

below ground shut-off valve / above ground tracing wire

☐

c.

above ground shut-off valve / below ground tracing wire

☐

d.

above ground shut-off valve

Feedback

Your answer is incorrect.

B149.1 (6.15.13 /14)

The correct answer is: above ground shut-off valve / below ground tracing wire

Question **17**

Not answered

Marked out of 1.00

[Flag question](#)

Question text

How should piping/tubing laid underground be protected against corrosion?

Select one:

☐

a.

waterproof paint

☐

b.

good engineering practice or manufacturer's instructions

☐

c.

teflon coating

☐

d.

electrical tape

### Feedback

Your answer is incorrect.

B149.1 (6.16.2)

The correct answer is: good engineering practice or manufacturer's instructions

### Question 18

Not answered

Marked out of 1.00

Flag question

### Question text

Which of the following is **not** an acceptable shut-off for a high pressure gas system?

Select one:

☐

a.

gate valve

☐

b.

ball valve

☐

c.

lubricated plug valve

d.

eccentric valve

### Feedback

Your answer is incorrect.

B149.1 (6.18.4)

The correct answer is: gate valve

### Question 19

Not answered

Marked out of 1.00

Flag question

### Question text

Which of the following is not a requirement for plastic tubing terminating above ground ?

Select one:

a.

Plastic piping not subject to external stress

b.

Casing extends at least 6 inches below grade

c.

Above ground portion is completely encased

d.

Exposed piping painted yellow to a height of 18 inches

### Feedback

Your answer is incorrect.

B149.1 (6.2.19)

The correct answer is: Exposed piping painted yellow to a height of 18 inches

### Question 20

Not answered

Marked out of 1.00

[Flag question](#)

### Question text

What is the maximum distance from the gas meter or line pressure regulator extension to existing system may be added without changing existing sizing ?

Select one:

a.

36 inches

b.

12 inches

c.

48 inches

d.

24 inches

### Feedback

Your answer is incorrect.

B149.9 (6.6.2)

The correct answer is: 24 inches

### Question 21

Not answered

Marked out of 1.00

Flag question

Question text

Which of the following is a permissible location for gas piping ?

Select one:

a.

Heating duct

b.

Elevator shaft

c.

False ceiling space (T.bar ceiling)

d.

Chimney

Feedback

Your answer is incorrect.

B149.1 6.7.2 , 6.7.6

The correct answer is: False ceiling space (T.bar ceiling)

Question **22**

Not answered

Marked out of 1.00

Flag question

Question text

Which of the following is a permitted practice ?

Select one:

a.

1/2 inch welded joint

b.

Using gas piping as an electrical ground

c.

Repairing a defective section of piping / tubing

d.

Use of a close nipple

Feedback

Your answer is incorrect.

B149.1 (6.14 , 6.9.2)

The correct answer is: 1/2 inch welded joint

Question **23**

Not answered

Marked out of 1.00

[Flag question](#)

Question text

How far must the unthreaded portion of a pipe nipple extend through a finished floor ?

Select one:

a.

2 inches

☐

b.

1/2 inch

☐

c.

1 1/2 inch

☐

d.

1 inch

### Feedback

Your answer is incorrect.

B149.1 (6.12.2)

The correct answer is: 2 inches

### Question **24**

Not answered

Marked out of 1.00

[Flag question](#)

### Question text

Which of the following appliances does not require a dirt pocket ?

Select one:

☐

a.

Furnace

☐

b.

water heater

☐

c.

Clothes dryer

d.

Boiler

### Feedback

Your answer is incorrect.

B149.1 (6.13.1)

The correct answer is: Clothes dryer

Question **25**

Not answered

Marked out of 1.00

[Flag question](#)

### Question text

What is the minimum length of a drip / dirt pocket ?

Select one:

a.

Equal to diameter of pipe it serves

b.

6 inches

c.

Equal to its length

d.

3 inches or diameter of pipe it serves , whichever is greater

### Feedback

Your answer is incorrect.

B149.1 (6.13.2)

The correct answer is: 3 inches or diameter of pipe it serves , whichever is greater

### Question 26

Not answered

Marked out of 1.00

[Flag question](#)

### Question text

What is the minimum depth of underground gas piping below a commercial drive way / parking lot ?

Select one:

☐

a.

24 inch

☐

b.

15 inch

☐

c.

36 inch

☐

d.

30 inch

### Feedback

Your answer is incorrect.

B149.1 (6.15.4)

The correct answer is: 24 inch

### Question 27

Not answered

Marked out of 1.00

Flag question

### Question text

For identification of a gas *pipng system* in a residential application. The maximum spacing of intervals along the entire length of the gas pipe shall not exceed:

Select one:

a.

Must be completely yellow in a residential building

b.

Identification not required

c.

20 feet

d.

6 Feet

### Feedback

Your answer is incorrect.

B149.1 (6.17.3)

The correct answer is: Identification not required

### Question 28

Not answered

Marked out of 1.00

Flag question

**Question text**

Where is / are the shut off valves located when a gas line is connected between two buildings ?

Select one:

☐

a.

At point of exit / entry of either building

☐

b.

At point of exit / entry of building with largest gas input

☐

c.

At the point of exit of the first building and point of entry of the second

☐

d.

At the point of exit / entry of the system with largest diameter piping

**Feedback**

Your answer is incorrect.

B149.1 (6.18.8)

The correct answer is: At the point of exit of the first building and point of entry of the second

**Question 29**

Not answered

Marked out of 1.00

Flag question

Question text

How long must a test be maintained once the appliance is installed ?

Select one:

a.

10 minutes

b.

1 hour

c.

30 minutes

d.

45 minutes

Feedback

Your answer is incorrect.

B149.1 (6.22.3 (d)

The correct answer is: 10 minutes

Question **30**

Not answered

Marked out of 1.00

Flag question

Question text

Which of the following is acceptable support for horizontal rooftop gas piping / tubing ?

Select one:

a.

Unpainted steel riser champs

☐

b.

Support not required on rooftops

☐

c.

Treated wooden blocks

☐

d.

Untreated wooden blocks

### Feedback

Your answer is incorrect.

B149.1 (6.25.1)

The correct answer is: Treated wooden blocks

### Question 31

Not answered

Marked out of 1.00

Flag question

### Question text

What types of fittings are required with steel pipe?

Select one:

☐

a.

Malleable iron or stainless steel and shall comply with ANSI/ASME B16.3

☐

b.

Ductile iron complying with CSA B64.10

☐

c.

Malleable iron or steel and shall comply with ANSI/ASME B16.3

d.

Duriron and complying with AWWA B.149.5

### Feedback

Your answer is incorrect.

6.2.2

The correct answer is: Malleable iron or steel and shall comply with ANSI/ASME B16.3

Question **32**

Not answered

Marked out of 1.00

Flag question

### Question text

What is acceptable termination to a gas line outlet not yet connected to an appliance ?

Select one:

a.

Ball valve

b.

Plug valve

c.

Cap, plug or plugged valve

d.

Nothing as long as gas is off

### Feedback

Your answer is incorrect.

B149.1 (6.12.1)

The correct answer is: Cap, plug or plugged valve

### Question 33

Not answered

Marked out of 1.00

[Flag question](#)

### Question text

What is the minimum distance from the surface of a wall that contains a gas line before protection is not required ?

Select one:

a.

1.25 inches

b.

1.5 inches

c.

1.75 inches

d.

2 inches

### Feedback

Your answer is incorrect.

B149.1 (6.16.4)

The correct answer is: 1.75 inches

### Question 34

Not answered

Marked out of 1.00

Flag question

Question text

What does CSST stand for ?

Select one:

a.

Computerized Structural Steel Tupperware

b.

Bradbury Steel Tubing

c.

Corrugated Stainless Steel Tubing

d.

Coated Stainless steel tubing

e.

Certified standard stainless tubing

Feedback

Your answer is incorrect.

B149.1 (6.2.8)

The correct answer is: Corrugated Stainless Steel Tubing

Question **35**

#### Question text

What is the minimum size piping that may be concealed ?

Select one:

a.

NPS 1/2 inch

b.

NPS 3/4 inch

☐

c.

NPS 3/8 inch

☐

d.

NPS 1/4 inch

#### Feedback

Your answer is incorrect.

B149.1 (6.3.9)

The correct answer is: NPS 1/2 inch

#### Question text

Which of the following is an acceptable fitting for a gas system ?

Select one:

☐

a.

1 inch x 3/4 inch steel bushing

☐

b.

1 inch street 90

☐

c.

1 inch x 3/4 inch malleable bushing

☐

d.

3/4 inch close nipple

#### Feedback

Your answer is incorrect.

B149.1

The correct answer is: 1 inch x 3/4 inch steel bushing

A red tag on a gas appliance indicates that the appliance must be \_\_\_\_\_ before it is put back into service.

Select one:

a.

Repaired or replaced

b.

Converted to a different fuel

c.

Relocated

d.

Re-certified

### Feedback

Your answer is correct.

The correct answer is: Repaired or replaced

### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A gas meter may be relocated by

Select one:

a.

A class A gas fitter

b.

A class B gas fitter

c.

A class C gas fitter

d.

An authorized gas company employee

e.

A certified gas contractor

### Feedback

Your answer is correct.

The correct answer is: An authorized gas company employee

### Question 3

Correct

Mark 1.00 out of 1.00

[Flag question](#)

### Question text

A class B gas fitters license issued after April 1, 2009 shall entitle the holder while employed by a gas contractor to install or alter.

Select one:

a.

A class C gas fitter

b.

A gas system consisting of atmospherically-fired units fitted with approved draft control devices with no limitations on the total input of the appliances

c.

A gas system consisting of atmospherically-fired units fitted with approved draft control devices with a limitation of 750000 Btuh on the total input of the appliances

d.

A gas system with an appliance input of 400000 Btuh or less

e.

Any gas system

### Feedback

Your answer is correct.

The correct answer is: A gas system with an appliance input of 400000 Btuh or less

### Question 4

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

An applicant for a class A gas fitters license shall have held a class B gas fitters license for a minimum of

Select one:

a.

3 years

b.

2 years

c.

1 year

d.

6 months

### Feedback

Your answer is correct.

The correct answer is: 2 years

### Question 5

Correct

Mark 1.00 out of 1.00

[Flag question](#)

### Question text

A gas fitters license may be renewed without re-examination unless it has been expired for :

Select one:

a.

More than 3 years

b.

More than 2 years

c.

More than 1 year

d.

Less than 3 years

e.

More than 5 years

### Feedback

Your answer is correct.

The correct answer is: More than 3 years

### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The gas fitter responsibility starts at

Select one:

a.

The discharge side of the gas meter

b.

The inlet side of the gas meter

c.

The discharge side of the system regulator

d.

The inlet side of the system regulator

e.

The discharge side of the appliance regulator

### Feedback

Your answer is correct.

The correct answer is: The discharge side of the gas meter

### Question 7

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A \_\_\_\_\_ may apply for a gas permit

Select one:

a.

Homeowner

b.

Class B gas fitter

c.

Renter

d.

Class A gas fitter

### Feedback

Your answer is correct.

The correct answer is: Homeowner

### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

Question text

A **Notification of Completion , Installation or Alteration** form shall be submitted :

Select one:

a.

Before the end of the fiscal year

b.

Before any work authorized by a permit is started

c.

Upon completion of the work authorized by a permit

d.

After each phase of the work authorized by a permit

Feedback

Your answer is correct.

The correct answer is: Upon completion of the work authorized by a permit

Question **9**

Correct

Mark 1.00 out of 1.00

### Question text

The owner of a single-family dwelling who lives or intends to live in that dwelling , may do the work of a gas fitter in that dwelling provided that :

Select one:

a.

All of the statements are correct

b.

No person is being paid to do or assist the owner in doing the work

c.

There is no other dwelling or premise that is directly attached to the single-family dwelling

d.

No part of the dwelling is rented or intended to be rented to any person

### Feedback

Your answer is correct.

The correct answer is: All of the statements are correct

What is the minimum clearance from a combustible material for a moisture-exhaust duct installed in a hospital?

a.  
1 inch

b.  
9 inches

c.  
6 inches

d.  
3 inches

#### Feedback

Your answer is incorrect.

(7.4.7)

The correct answer is:  
6 inches

#### Question 2

Correct

Mark 1.0 out of 1.0

Flag question

#### Question text

According to the B.149.1 a forced-air furnace shall be equipped with a high-temperature limit control set at a maximum temperature of:

a.  
200 F

b.  
250 F

c.  
350 F

d.  
300 F

#### Feedback

Your answer is correct.

(7.8.6)

The correct answer is:  
250 F

#### Question 3

Correct

Mark 1.0 out of 1.0

### Question text

Which of the following is not a requirement when installing an appliance in a bedroom?

a.  
The appliance must be equipped with a pressure regulator

b.  
The appliance must be of the automatic temperature-controlled type

c.  
The appliance must be vented and meet the requirements for combustion air specified by section 8

d.  
The appliance must have a 100% safety shut-off control

### Feedback

Your answer is incorrect.

(G&SR 7.25A.3)

The correct answer is:

The appliance must be vented and meet the requirements for combustion air specified by section 8

### Question 5

Correct

Mark 1.0 out of 1.0

Flag question

### Question text

A furnace that is used to heat a residence under construction shall be installed on a finished concrete floor or on a poured concrete slab that is at least:

a.  
4-inch thick

b.  
1-inch thick

c.  
6-inch thick

d.  
3-inch thick

#### Feedback

Your answer is correct.

(7.13.5)

The correct answer is:  
4-inch thick

#### Question 6

Correct

Mark 1.0 out of 1.0

Flag question

#### Question text

Where any combustible gas, vapor, or dust is present the outdoor intake for a DFMA shall not be less what horizontal distance from the vertical plane:

a.  
15 feet

b.  
20 feet

c.  
5 feet

d.  
10 feet

#### Feedback

Your answer is correct.

(7.20.9)

The correct answer is:  
20 feet

Question **7**

Incorrect

Mark 0.0 out of 1.0

Flag question

Question text

In a spray booth application, an interlock shall be provided to lock out the spraying equipment unless the DFPAH is operated in:

a.  
Process mode

b.  
Ventilation mode

c.  
Exhaust mode

d.  
Spray mode

Feedback

Your answer is incorrect.

(7.21.10)

The correct answer is:  
Ventilation mode

Question **8**

Correct

Mark 1.0 out of 1.0

#### Question text

Except for underfired storage-type water heaters, what is the minimum clearance from a combustible material for any other type of water heater?

a.  
2-inch

b.  
6-inch

c.  
12-inch

d.  
4-inch

#### Feedback

Your answer is incorrect.

(7.27.4)

The correct answer is:  
6-inch

#### Question 14

Correct  
Mark 1.0 out of 1.0

Flag question

Question text

What is the minimum distance from a property line when installing a outdoor pool heater?

- ☐ a.  
48-inch
- ☒ b.  
18-inch
- ☐ c.  
30-inch
- ☐ d.  
24-inch

Feedback

Your answer is correct.

(7.26.3)

The correct answer is:  
18-inch

Question **15**

Correct

Mark 1.0 out of 1.0

Flag question

Question text

What is the minimum clearance from the floor to an infrared heater when installed in a repair or shop area that communicates with an aircraft hangar?

- ☐ a.  
10 feet
- ☒ b.

8 feet

☐

c.

6 feet

☐

d.

4 feet

#### Feedback

Your answer is correct.

(7.23.5)

The correct answer is:

8 feet

Identify the sub-atomic particles found in an atom? Select all that apply.

Select one or more:

☒

a.

Electron

☐

b.

Neutron

☐

c.

Nucleus

☒

d.

Proton

☐

e.

Core

#### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answers are: Proton, Neutron, Electron

#### Question 2

Incorrect

Mark 0.00 out of 1.00

#### Question text

What is a characteristic of a conductor relative to its electrons?

Select one:

a.  
Positively charged

b.  
Held loosely in their orbits

c.  
Held tightly in their orbits

d.  
Neutral charged

#### Feedback

Your answer is incorrect.

The correct answer is: Held loosely in their orbits

#### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Identify the materials which are considered good conductors. Select all that apply.

Select one or more:

☐

a.  
Plastic

☒

b.  
Aluminum

☒

c.  
Silver

☐

d.  
Glass

### Feedback

Your answer is correct.

The correct answers are: Silver, Aluminum

### Question 9

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is created when a large amount of electrons are moving through a small conductor?

Select one:

☐

a.  
Low resistance

☐

b.  
Voltage

c.  
Heat

d.  
Low vacuum pressure

#### Feedback

Your answer is correct.

The correct answer is: Heat

Question **10**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

How are conductors sized?

Select one:

a.  
Weight

b.  
Diameter

c.  
Density

d.  
Cross sectional area

#### Feedback

Your answer is correct.

The correct answer is: Cross sectional area

Question **11**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which unit of measure is used to describe “Electromotive Force”?

Select one:

a.  
Voltage

b.  
Ampere

c.  
Ohms

d.  
Watts

Feedback

Your answer is correct.

The correct answer is: Voltage

Question **12**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What does “I” indicate in Ohm’s Law?

Select one:

a.  
Resistance

b.

#### Question text

\_\_\_\_\_ is the potential pressure difference between two points in an electrical circuit.

Select one:

a.  
Current

b.  
Resistance

c.  
Voltage

d.  
Wattage

#### Feedback

Your answer is correct.

The correct answer is: Voltage

#### Question 14

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is used to measure the amount of current that flows through a conductor ?

Select one:

a.  
Amperes

b.  
Volts

c.  
Watts

d.  
Ohms

#### Feedback

Your answer is correct.

The correct answer is: Amperes

Question **15**

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Calculate the current through a circuit if it has 50 ohms of resistance and the voltage is 24 volts?

Select one:

a.  
 $0.48 \Omega$

b.

2.08  $\Omega$

c.

2.08 A

d.

0.48 A

#### Feedback

Your answer is incorrect.

The correct answer is: 0.48 A

#### Question 16

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Calculate the voltage of a circuit if it has 15 ohms of resistance and the current flow is 8 amps?

Select one:

a.

120

b.

7

c.

1.875

d.

225

#### Feedback

Your answer is correct.

The correct answer is: 120

#### Question 17

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What would be the anticipated resistance of a circuit with an EMF of 120 volts and a current of 6 amps?

Select one:

☐

a.  
0.05  $\Omega$

☐

b.  
2  $\Omega$

☒

c.  
20  $\Omega$

☐

d.  
0.5  $\Omega$

### Feedback

Your answer is correct.

The correct answer is: 20  $\Omega$

### Question 18

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which of the following materials has the highest resistance to current flow?

Select one:

☐

a.  
Aluminum

☐

b.

Copper

☒

c.

Glass

☐

d.

Salt Water

#### Feedback

Your answer is correct.

The correct answer is: Glass

#### Question 19

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What wire gauge can handle the most current?

Select one:

☐

a.

8

☐

b.

10

☐

c.

12

☒

d.

14

#### Feedback

Your answer is incorrect.

The correct answer is: 8

At what speed does the electron move?

Select one:

☐

- a.  
25 feet (7.62 meters) per second
- ☐
- b.  
186,000 miles (299,792 kilometers) per hour
- ☒
- c.  
60 miles (96.56 kilometers) per hour
- ☐
- d.  
186,000 miles (299,792 kilometers) per second

#### Feedback

Your answer is incorrect.

The correct answer is: 186,000 miles (299,792 kilometers) per second

#### Question 2

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is the type of transformer that increases voltage?

Select one:

☐

a.  
Step around

☐

b.  
Step up

☐

c.  
Step over

☒

d.  
Step down

#### Feedback

Your answer is incorrect.

The correct answer is: Step up

Question **3**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What are the two parts of a switch?

Select one:

☐

a.  
Bridge and gap

☐

b.  
Lever and fulcrum

☐

c.  
Point and armature

☒

d.  
Contact and pole

Feedback

Your answer is correct.

The correct answer is: Contact and pole

Question **4**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the moving part of a switch?

Select one:

☐

a.  
Arc

☐

b.  
Contact

c.  
Throw

d.  
Pole

#### Feedback

Your answer is correct.

The correct answer is: Pole

#### Question 5

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What type of switch can run 2 separate circuits independently and has a neutral position?

Select one:

a.  
Rotary

b.  
Single throw double pole

c.  
Double pole single throw

d.  
Double throw single pole

#### Feedback

Your answer is incorrect.

The correct answer is: Double throw single pole

#### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the simplest type of fuse?

Select one:

a.  
Metal conductor

b.  
Circuit breaker

c.  
Transforming

d.  
Time delay

Feedback

Your answer is correct.

The correct answer is: Metal conductor

Question **7**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

How many amps should be safely ran through a 15 amp fuse?

Select one:

a.  
17

b.  
15

c.  
10

d.  
12

#### Feedback

Your answer is incorrect.

The correct answer is: 12

#### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the purpose of a circuit protector?

Select one:

a.  
Control voltage

b.  
Manually control the energy in a circuit

c.  
Prevent fire and other damage

d.  
Protect wires from the weather and mechanical damage

#### Feedback

Your answer is correct.

The correct answer is: Prevent fire and other damage

#### Question 9

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What, if excessive, causes a circuit breaker to trip?

Select one:

a.  
Current

b.  
Ohms

c.  
Voltage

d.  
Resistance

Feedback

Your answer is correct.

The correct answer is: Current

Question **10**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the purpose of a transformer?

Select one:

a.  
Increase the amount of resistance

b.  
Increase or decrease the voltage

c.  
Change from AC to DC

d.  
Reverse the flow of electricity

#### Feedback

Your answer is incorrect.

The correct answer is: Increase or decrease the voltage

#### Question **11**

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

How is electrical energy transferred from the primary to the secondary windings of a transformer?

Select one:

a.  
With an electrical connection

b.  
Induction

c.  
With a switch

d.  
Mechanically

#### Feedback

Your answer is correct.

The correct answer is: Induction

#### Question **12**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is required for induction to occur?

Select one:

a.  
Magnetic field and moving conductor

b.  
High voltage

c.  
Open switch

d.  
A perfect vacuum with static electricity

Feedback

Your answer is correct.

The correct answer is: Magnetic field and moving conductor

Question **13**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What type of power can a transformer be used on?

Select one:

a.  
AC or DC

b.  
DC

c.  
None of the above

d.  
AC

#### Feedback

Your answer is correct.

The correct answer is: AC

#### Question 14

Partially correct

Mark 0.50 out of 1.00

Flag question

#### Question text

What electrical components work using the principle of electromagnetism? Select all that apply:

Select one or more:

a.  
Transformer

b.  
Relay coil

c.  
Light bulb

d.  
Fuse

#### Feedback

Your answer is partially correct.

You have correctly selected 1.

The correct answers are: Transformer, Relay coil

#### Question 15

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In a relay, what is attracted to the stationary contact when the coil is energized?

Select one:

a.  
An armature

b.  
A spring

c.  
An electron

d.  
A motor

#### Feedback

Your answer is correct.

The correct answer is: An armature

#### Question 16

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is the primary advantage of using a relay?

Select one:

a.  
Eliminates the need for fuses

b.  
Smaller wire used from a remote switch

c.  
Faster operation of a motor

d.  
Reduces resistance In the circuit

#### Feedback

Your answer is incorrect.

The correct answer is: Smaller wire used from a remote switch

#### Question 17

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What type of contacts are used on a relay switch?

Select one:

a.  
Both NC and/or NO are correct

b.  
Normally closed (NC)

c.  
Normally open (NO)

d.  
Step down or step up

#### Feedback

Your answer is correct.

The correct answer is: Both NC and/or NO are correct

What type of diagram is used to illustrate wiring principles of circuits?

Select one:

a.  
Ladder

b.  
Moody

c.  
Venn

d.  
Stepped

#### Feedback

Your answer is correct.

The correct answer is: Ladder

#### Question 2

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

What type of current is most commonly generated in North America?

Select one:

a.  
Universal

b.  
Alternating

c.  
Overloading

d.  
Direct

#### Feedback

Your answer is correct.

The correct answer is: Alternating

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the term used to identify a rotation of  $360^\circ$  of an AC generator?

Select one:

a.  
Hertz

b.  
Circle

c.  
Period

d.  
Moment

### Feedback

Your answer is correct.

The correct answer is: Hertz

### Question 4

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

How many times is peak power created in a single rotation/cycle of an AC generator?

Select one:

a.  
1

b.  
60

c.  
120

d.  
2

#### Feedback

Your answer is incorrect.

The correct answer is: 2

#### Question 5

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is a common source of DC power?

Select one:

a.  
Electromagnet

b.  
Hydroelectric plant

c.  
Wall receptacle

d.  
Batteries

#### Feedback

Your answer is correct.

The correct answer is: Batteries

#### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the primary difference between AC and DC?

Select one:

☐

a.  
Amount of voltage

☐

b.  
Intensity

☐

c.  
Amount of resistance

☒

d.  
Direction of electron flow

Feedback

Your answer is correct.

The correct answer is: Direction of electron flow

Question **7**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is always present around a conductor when current is flowing through it?

Select one:

☐

a.  
Perfect vacuum

☐

b.  
Light energy

c.  
Magnetic field

d.  
Heat energy

#### Feedback

Your answer is correct.

The correct answer is: Magnetic field

#### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What type of circuit has only one conductive path for power to get to all loads?

Select one:

a.  
Short

b.  
Series

c.  
Parallel

d.  
Complete

#### Feedback

Your answer is correct.

The correct answer is: Series

#### Question 9

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In a parallel circuit, what would be the result of a failed wire to one of the loads?

Select one:

☐

a.  
All loads would continue to operate

☒

b.  
Only the load with the failed wire would stop operating

☐

c.  
All loads would stop operating

☐

d.  
Only the last load would stop operating

#### Feedback

Your answer is correct.

The correct answer is: Only the load with the failed wire would stop operating

Question **10**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What does EOLR represent ?

Select one:

☐

a.  
Electrical Ohm Light Reducer

☐

b.  
Energized Over Load Relay

c.  
End Open Line Relay

d.  
End Of Line Resistor

#### Feedback

Your answer is correct.

The correct answer is: End Of Line Resistor

#### Question 11

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is the purpose of an EOLR?

Select one:

a.  
Create resistance in supervisory circuit

b.  
Protects circuit from amp over load

c.  
Increases voltage during short circuit

d.  
Operate the last device in a zone

#### Feedback

Your answer is incorrect.

The correct answer is: Create resistance in supervisory circuit

#### Question 12

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the typical voltage of a supervised alarm circuit equipped with an EOLR?

Select one:

☐

a.  
240v

☒

b.  
24v

☐

c.  
20-30mV

☐

d.  
120v

#### Feedback

Your answer is correct.

The correct answer is: 24v

#### Question **13**

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

A wire is broken on a supervised normally open parallel alarm circuit equipped with an EOLR. What would the resistance be?

Select one:

☐

a.  
12 ohms

☒

b.

0 ohms

☐

c.

4700 ohms

☐

d.

Infinite

#### Feedback

Your answer is incorrect.

The correct answer is: Infinite

#### Question 14

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is supervised in an alarm zone circuit?

Select one:

☐

a.

The devices

☒

b.

The panel

☐

c.

The wires

☐

d.

The devices and wires

#### Feedback

Your answer is incorrect.

The correct answer is: The wires

#### Question 15

Correct

Mark 1.00 out of 1.00

Flag question

Question text

How does an alarm panels' supervisory function identify a broken wire in a circuit?

Select one:

☐

a.  
Change in temperature

☐

b.  
Change in voltage

☐

c.  
Change in wattage

☒

d.  
Change in resistance

Feedback

Your answer is correct.

The correct answer is: Change in resistance

Question **16**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

According to the "Electron Flow Theory"; in what direction does current flow in a circuit?

Select one:

☒

a.  
Positive to negative

☐

b.  
Downstream

c.  
Upstream

d.  
Negative to positive

#### Feedback

Your answer is incorrect.

The correct answer is: Negative to positive

#### Question 17

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is a point in a circuit called that has neither a surplus, nor shortage of electrons?

Select one:

a.  
Sufficient

b.  
Hot

c.  
Cold

d.  
Neutral

#### Feedback

Your answer is correct.

The correct answer is: Neutral

#### Question 18

Incorrect

Mark 0.00 out of 1.00

Question text

What is the electrical charge of the earth?

Select one:

☐

a.  
Neutral

☐

b.  
Ionized

☒

c.  
Positive

☐

d.  
Negative

Feedback

Your answer is incorrect.

The correct answer is: Neutral

Question **19**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the purpose of the neutral wire in a circuit?

Select one:

☐

a.  
Provide normal path for current to the source

☐

b.  
Provides a source of voltage to the loads in a circuit

c.  
Route stray currents to the earth

d.  
Safely discharges short circuits to a neutral location

#### Feedback

Your answer is incorrect.

The correct answer is: Provide normal path for current to the source

#### Question 20

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What happens when the resistance of a circuit is decreased?

Select one:

a.  
Amps increase

b.  
Amperage decreases

c.  
Voltage increases

d.  
Ohms increase

#### Feedback

Your answer is incorrect.

The correct answer is: Amps increase

#### Question 21

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the condition of a circuit when a switch is in the closed position?

Select one:

☐

a.  
De-energized

☐

b.  
Shorted out

☐

c.  
Neutral

☒

d.  
Energized

### Feedback

Your answer is correct.

The correct answer is: Energized

Question **22**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the circuit resistance of below image ?

Select one:

a.  
12  $\Omega$

b.  
6  $\Omega$

c.  
4  $\Omega$

d.  
8  $\Omega$

#### Feedback

Your answer is correct.

The correct answer is: 12  $\Omega$

#### Question 23

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is the circuit amperage of above image ?

Select one:

a.  
480 A

☒

b.  
120 A

☐

c.  
10 A

☐

d.  
30 A

#### Feedback

Your answer is incorrect.

The correct answer is: 10 A

#### Question 24

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What type of circuit is shown in above diagram ?

Select one:

☐

a.  
Short

☐

b.  
Parallel

☐

c.  
Series and Parallel

☒

d.  
Series

#### Feedback

Your answer is correct.

The correct answer is: Series

Question **25**

Correct

Mark 1.00 out of 1.00

What is the total resistance in the parallel circuit ? Answer  Ohms

Feedback

The correct answer is: 2.2

When heated by the pilot burner, the thermocouple will generate a small electrical charge: approximately \_\_\_\_ to \_\_\_\_ millivolts

Select one:

☐

a.  
10 - 30

☐

b.  
10 - 20

☒

c.  
20 - 30

☐

d.  
10 - 15

#### Feedback

Your answer is correct.

The correct answer is: 20 - 30

#### Question 2

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

When the hot junction is heated, a small voltage is generated at the cold junction. The greater the temperature difference between the hot junction and the cold junction the greater the voltage generated. For this reason, it is important that only \_\_\_\_ to \_\_\_\_ inches of the hot junction is heated.

Select one:

☐

a.  
 $1/2$  -  $7/8$

☒

b.  
 $3/8$  -  $1/2$

☐

c.  
 $1/4$  -  $3/8$

d.  
 $\frac{1}{2} - \frac{3}{4}$

#### Feedback

Your answer is correct.

The correct answer is:  $\frac{3}{8} - \frac{1}{2}$

#### Question 3

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

A thermopile is composed of several thermocouples attached together in series. It is easy to distinguish a thermopile from a thermocouple because it is bigger. When subjected to heat, a much greater voltage is created, up to \_\_\_\_\_ millivolts.

Select one:

a.  
750

b.  
275

c.  
20 - 30

d.  
10 - 20

#### Feedback

Your answer is correct.

The correct answer is: 750

#### Question 4

Correct

Mark 1.00 out of 1.00

Question text

. Current conducted through the flame (flame current) is generally in the range of \_\_\_\_\_ amps.

Select one:

a.  
2 -4 microamps

b.  
30 millivolts

c.  
750 millivolts

d.  
2 - 4 milliamps

Feedback

Your answer is correct.

The correct answer is: 2 -4 microamps

Question **5**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Flame Rectification is achieved by placing a grounding electrode (usually the burner head) in the flame which is at least \_\_\_\_\_ times larger than the flame rod or flame electrode

Select one:

a.  
2

b.  
20

c.  
15

d.  
4

#### Feedback

Your answer is correct.

The correct answer is: 4

#### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Flame failure response time for low-volume natural gas appliances is \_\_\_\_\_ seconds.

Select one:

a.  
10

b.  
90

c.  
60

d.  
20

#### Feedback

Your answer is correct.

The correct answer is: 90

What is another name for a Single Phase Induction Motor?

Select one:

a.  
Sinusoidal motor

b.  
Commutator motor

c.  
Rotary motor

d.  
Asynchronous motor

#### Feedback

Your answer is correct.

The correct answer is: Asynchronous motor

#### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the name of the stationary part of a single phase motor?

Select one:

a.  
Pole

b.  
Shaft

c.  
Rotor

d.  
Stator

#### Feedback

Your answer is correct.

The correct answer is: Stator

Question **3**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which of the following relates directly with the speed of the motor?

Select one:

☐

a.  
The rotational direction

☐

b.  
The speed of polarity changes

☐

c.  
The length of the shaft

☒

d.  
The number of coils (Poles)

Feedback

Your answer is correct.

The correct answer is: The number of coils (Poles)

Question **4**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

In reference to single phase induction motors. What does  $N_s$  refer to?

Select one:

☒

a.  
Speed of rotation

b.  
VA rating

c.  
Speed of resistance in ohms

d.  
Frequency

#### Feedback

Your answer is correct.

The correct answer is: Speed of rotation

#### Question 5

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

The electrical power factor for a single phase motor is low as compared to 3 phase induction motors.

Select one:

True

False

#### Feedback

The correct answer is 'True'.

#### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the most common type of three phase motor ?

Select one:

- a.  
Electrically commutated
- ☒ b.  
Induction
- ☐ c.  
Permanent split capacitor
- ☐ d.  
Shaded pole

#### Feedback

Your answer is correct.

The correct answer is: Induction

#### Question 7

Partially correct  
Mark 0.50 out of 1.00

Flag question

#### Question text

Which of the following describes the principle of "induction" ? (choose more than one answer if applicable)

Select one or more:

☐

a.  
A moving conductor is run through a magnetic field,

☒

b.  
A stationary conductor is placed within a moving magnetic field

☐

c.  
Opposite polarities attract

☐

d.  
Like (the same) polarities attract

#### Feedback

Your answer is partially correct.

You have correctly selected 1.

,

The correct answers are: A moving conductor is run through a magnetic field,, A stationary conductor is placed within a moving magnetic field

Question **8**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What are the two main components of the three phase induction motor ?

Select one:

a.

The starter and the coil

b.

The stator and the rotor

c.

The commutator and the brushes

d.

The capacitor and the commutator

Feedback

Your answer is incorrect.

The correct answer is: The stator and the rotor

Question **9**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which part of an electric motor is in motion when operating ?

Select one:

a.  
The rotor

b.  
The brushes

c.  
The stator

d.  
The windings

#### Feedback

Your answer is correct.

The correct answer is: The rotor

#### Question 10

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Which of the following is an alternative name for an induction motor ?

Select one:

a.  
Hamster wheel

b.  
Squirrel cage

c.  
Rotary

d.  
Cycling motor

#### Feedback

Your answer is correct.

The correct answer is: Squirrel cage

Question **11**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which of the following refers to the rate of the rotating magnetic field in an induction motor ?

Select one:

a.  
Synchronous speed

b.  
Rated speed

c.  
Winding velocity

d.  
Rpm

Feedback

Your answer is correct.

The "rated" speed refers to the rpm of the rotor

The correct answer is: Synchronous speed

Question **12**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which of the following is a description of "slip" when referencing an induction motor ?

Select one:

- a.  
The capacitor's start up delay.  
☐
- b.  
The clutch efficiency of the motor.  
☒
- c.  
The difference between the rated and synchronous motor speeds.  
☐
- d.  
The degree of drive belt lag.  
☐

#### Feedback

Your answer is correct.

The correct answer is: The difference between the rated and synchronous motor speeds.

#### Question 13

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

The percentage of slip also represents the amount of \_\_\_\_\_ ?

Select one:

- ☒ a.  
Torque
- ☐ b.  
Horsepower
- ☐ c.  
Efficiency
- ☐ d.  
Amperage draw

#### Feedback

Your answer is correct.

The correct answer is: Torque

Question **14**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What does NEMA stand for ?

Select one:

☒

a.  
National Electrical Manufacturers Association

☐

b.  
Nominal Efficiency Maintenance Accord

☐

c.  
None Equivalent Measures Encoded

☐

d.  
National Energy Maintenance Enterprise

Feedback

Your answer is correct.

The correct answer is: National Electrical Manufacturers Association

Question **15**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What are the three main electrical components of a variable frequency drive ?

Select one:

☐

a.  
Diodes, capacitors, and transistors.

☐

b.  
Sources, switches, and loads.

c.  
VFD's are non electrical.

d.  
Conductors, insulators, and semiconductors.

#### Feedback

Your answer is incorrect.

The correct answer is: Diodes, capacitors, and transistors.

Why is high voltage more dangerous to human shock than low voltage?

Select one or more:

a.  
Low voltage lasts only a split second

b.  
High voltage cant be grounded

c.  
Low voltage blows breakers

d.  
High voltage over comes resistance

#### Feedback

Your answer is correct.

The correct answer is: High voltage over comes resistance

#### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Why is water dangerous when working around electrical power?

Select one:

a.  
Water increases the voltage

b.  
Water gives a path for stray current to the ground

c.  
Water reacts chemically with some types of conductors

d.  
Water decreases the resistance of the body

#### Feedback

Your answer is correct.

The correct answer is: Water decreases the resistance of the body

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the first thing that should be done when an un-conscious shock victim is discovered?

Select one:

a.  
Check for breathing

b.  
Determine if the cause of shock is still present

c.  
Check for a pulse

d.  
Start CPR

#### Feedback

Your answer is correct.

The correct answer is: Determine if the cause of shock is still present

Question **4**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

List the factors that effect the severity of electrical shock to a body?

Select one:

☐

a.

Ventricular cavitation occurs within the body

☒

b.

The heart muscles cannot move and severe burns

☐

c.

The body goes into a Cardiopulmonary state

☐

d.

The heart beats at an excessive rate and muscles begin to vibrate

Feedback

Your answer is correct.

The correct answer is: The heart muscles cannot move and severe burns

Question **5**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the lowest amperage during electrical shock that will likely result in cardiac arrest?

Select one:

☐

a.

above 200 amps

b.  
above 200 mA

c.  
above 1 amp

d.  
above 2 amps

#### Feedback

Your answer is incorrect.

The correct answer is: above 200 mA

#### Question 6

Partially correct

Mark 0.67 out of 1.00

[Flag question](#)

#### Question text

What are variables that effect the severity of electrical shock on the body? select all that apply.

Select one or more:

a.  
Duration of exposure to the current

b.  
Temperature of the surrounding atmosphere

c.  
Path of current through the body

d.  
Amount of sweat or moisture on the skin

#### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answers are: Path of current through the body, Amount of sweat or moisture on the skin, Duration of exposure to the current

What is the voltage found in a residential distribution panel?

Select one:

☐

a.  
120/240 volt single-phase

☒

b.  
120/240 three-phase

☐

c.  
24/120 three-phase

☐

d.  
24/120 single-phase

#### Feedback

Your answer is incorrect.

The correct answer is: 120/240 volt single-phase

#### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What are types of Solder-less connections? Select all that apply.

Select one or more:

☒

a.  
Crimp-on

☒

b.  
Insulated cap

☐

c.  
Press blade

☐

d.  
Push in

☐

e.  
Thread less

#### Feedback

Your answer is correct.

The correct answers are: Crimp-on, Insulated cap

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is used to identify the size and capacity of insulated-cap connectors?

Select one:

a.  
Color coded

b.  
Marked with wire gauge size

c.  
Marked with gauge size and/or color coded

d.  
Amperage stamp on end

#### Feedback

Your answer is correct.

The correct answer is: Marked with gauge size and/or color coded

#### Question 4

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Where must most line voltage connections occur?

Select one:

☐

a.  
In a light fixture

☐

b.  
In a wall

☐

c.  
In an electrical panel

☒

d.  
In a junction box

Feedback

Your answer is correct.

The correct answer is: In a junction box

Question **5**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What type of conduit material **can not** come in contact with concrete/cement?

Select one:

☒

a.  
Aluminum

☐

b.  
Poly vinyl chloride

☐

c.  
Thermoplastic

☐

d.  
Galvanized steel

Feedback

Your answer is correct.

The correct answer is: Aluminum

Question **6**

Incorrect

Mark 0.00 out of 1.00

Question text

What type of conduit should be used for connecting to a motor?

Select one:

☐

a.  
LFMC

☐

b.  
RMT

☒

c.  
EMT

☐

d.  
PVC

Feedback

Your answer is incorrect.

The correct answer is: LFMC

Question **7**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which type of circuit breaker is used for 240 V circuits?

Select one:

☐

a.  
Auto reset

b.  
Double pole

c.  
Bonded

d.  
Rubber jacket

#### Feedback

Your answer is correct.

The correct answer is: Double pole

#### Question 8

Incorrect

Mark 0.00 out of 1.00

#### Question text

Which of the following connections may not be soldered?

Select one:

a.  
240V neutral wires

b.  
240 V hot wires

c.  
Bonding conductors

d.  
Switch poles

#### Feedback

Your answer is incorrect.

The correct answer is: Bonding conductors

#### Question 9

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Which is the minimum size color code Twist-on Wire Connector that should be used to connect 2 – 14 AWG conductors?

Select one:

☐

a.  
Grey

☒

b.  
Blue

☐

c.  
Orange

☐

d.  
Red

Feedback

Your answer is incorrect.

The correct answer is: Orange

Question **10**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What does the abbreviation EMT indicate?

Select one:

☐

a.  
Engineered metal tubing

☐

b.  
Electrically molded tubing

c.

Electrical metallic tubing

d.

Engineered molded tubing

#### Feedback

Your answer is correct.

The correct answer is: Electrical metallic tubing

What would the power rating be for a 5 amp DC single phase motor designed to operate at 12 volts?

Answer:

#### Feedback

#### **Mechanical Energy & Power**

Electrical power is the rate at which work is done in an electric circuit in a given time.

Watts (W) are used to measure power.

1 watt is equal to 1 volt multiplied by 1 amp.

*Watts = Volts x Amps*

*Watts = 12V x 5 amps*

The correct answer is: 60

#### Question **2**

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

If a AC single phase motor had a power rating of 1125 watts, what would the motor be rated in horsepower?

Answer:

#### Feedback

#### **Horsepower**

One horse can lift 330lbs/100ft/min or (550lbs/ft/sec) which is equivalent to 750 watts of power or 1.0 horsepower in the international system (SI) and the heat equivalent of 2550BTUs (British thermal units) or 4500 kilograms/meters /minute.

Therefore:

$\text{Watts} \div 750 \text{watts/hp} = \text{HP}$

$1125\text{W} \div 750\text{W/HP} = 1.5 \text{ HP}$

The correct answer is: 1.5

Question **3**

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

Select the type of single phase motor that best matches the description below.

A low horsepower, low torque motor that does not use a commutator or capacitor. This motor uses metal rings (typically copper) wrapped around the stator to put the induced alternating magnetic field out of phase. Copper is used for the rings as it has a different resistance when compared to the typical stator construction of steel. It is a self starting motor that has basic construction.

a.  
Shaded Pole

b.  
Capacitor Start

c.  
Split Phase

d.  
Permanent Split Phase

#### Feedback

Your answer is correct.

The shaded pole motor, like all induction motors has a stator and a rotor. The stator carries a main winding and a shaded winding known as the shaded coil. The shaded coil is usually a solid copper ring wrapped around a portion of the stator's metal case. A shaded pole motor may have more than one shaded pole. Due to the difference in resistance between the copper shaded ring and the stator's metal construction (usually some form of iron) the induced current (present in both metals) creates a difference in polarity within the stator's magnetic field. The shaded pole can not be removed from the circuit due to magnetic field being generated from induced current. Shaded pole motors are self starting, low torque, low efficiency, and designed with low power ratings. Shaded pole motors are cheap to make and reliable due to their very basic construction.

The correct answer is:  
Shaded Pole

#### Question 4

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

Select the type of single phase motor that best matches the description below.

This type of motor has high starting torque as well as high running torque. They are good motors for use in applications that require frequent starting and stopping, such as refrigerator pumps. They contain capacitors, 2 windings, and a centrifugal switch.

a.  
Shaded Pole

b.  
Capacitor Start

c.  
Capacitor Start Capacitor Run

d.  
Split-Phase

#### Feedback

Your answer is correct.

Capacitor start-capacitor run motor is much like the capacitor start motor in that it has two windings, a start winding (auxiliary winding) in series with a capacitor and centrifugal switch and a main winding. The purpose of the start winding is the same, to get the motor running and add extra starting torque. The difference is that there is a capacitor in parallel with the start winding that does not get remove from the circuit, only the start capacitor gets remove when the motor get up to 75% of rated speed. The purpose of the capacitor that stays in the circuit is to keep the starting winding active and out of phase with the main winding. Keeping both windings in use will increase torque while the motor is running. This motor is good for higher inertia loads and where frequent starting and stopping are required. It is used to in pumps present in refrigerators, air conditioners, compressor tools and many loads of this nature.

The correct answer is:  
Capacitor Start Capacitor Run

**Question 5**

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

**Question text**

Select the type of single phase motor that best matches the description below.

This type of motor uses 2 windings, a start winding and a run winding. The start winding is removed from the circuit once the motor gets up to speed through the use of a centrifugal switch. Starting of the motor is achieved by using different gauge wire for the windings and starting torque is low. The different gauge windings gives them a different resistance and therefore puts their magnetic fields out of phase and the rotor begins to spin. Once the velocity of the rotor reaches a certain threshold the start winging is removed from the circuit and the rotor continues to spin and "chase" the magnetic field being generated by the run winding.

a.  
Split-Phase

b.  
Capacitor Start

c.  
Permanent Split Capacitor

d.  
Shaded Pole

#### Feedback

Your answer is incorrect.

The split phase motor typically uses a single phase 120 volt power supply and has a rating of 1 HP or less. Split phase motors are used in applications where starting torque requirements are low. Common applications of split phase motors include: fans, blowers, pumps, office machines, and tools, such as small saws or drill presses. The split phase motor has a start and run winding. Both windings are energized when the motor is started. When the motor reaches about 75% of its rated full load speed, the start winding is disconnected from the circuit by a centrifugal switch.

Split-phase motors are also known as resistance phase motors. This is because they have additional resistance added to the start winding. Due to the main winding having a different resistance when compared to the starting winding it will put each winding out of phase, creating a rotational magnetic field and force the rotor to start moving. This starting winding will give the initial push to start the rotation, and the main winding will keep the motor running.

The correct answer is:  
Split-Phase

#### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The graphic below shows  current powering a motor through the use of a mechanical commutator.

#### Feedback

Your answer is correct.

The correct answer is:

The graphic below shows [DC] current powering a motor through the use of a mechanical commutator.

#### Question 7

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

The term Hertz is used when making reference to which of the following?

Select one:

a.  
Voltage

b.  
Amperage

c.  
Frequency

d.  
Current

### Feedback

Your answer is correct.

### Frequency

Frequency is how often something repeats. In alternating current, the frequency is the number of times a sine wave completes a cycle going from positive to negative repeating in a given time period (seconds). It is measured in hertz. Hertz is the number of cycles per second (one hertz is equal to one cycle per second). The more cycle that occurs per second, the higher the frequency. In north America the frequency of the voltage and current delivered to homes and business is 60Hz.

The correct answer is: Frequency

Question **8**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The graphic below shows a frequency of Answer  Hz.

Feedback

**Frequency**

Frequency is how often something repeats. In alternating current, the frequency is the number of times a sine wave completes a cycle going from positive to negative repeating in a given time period (seconds). It is measured in hertz. Hertz is the number of cycles per second (one hertz is equal to one cycle per second). The more cycle that occurs per second, the higher the frequency. In north America the frequency of the voltage and current delivered to homes and business is 60Hz.

*The number of complete cycles in the graphic is 7 cycles elapsed over a period of 1 second; therefore, 7Hz.*

The correct answer is: 7

Question **9**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

\_\_\_\_\_ is the measure of the force required to cause rotation.

Select one:

☐

a.  
Power

☐

b.  
Pressure

☐

c.  
Torque

☒

d.  
Force

### Feedback

Your answer is incorrect.

#### **Torque**

Torque is the measure of the force that can cause an object to rotate. The more torque a motor produces the more work it can do. The torque output of a motor is the amount of rotational force that the motor develops and is measured in Newton-meters (Nm). The torque and speed relationship are inversely proportional since the rated output power of a motor is fixed value. As output speed increases, the available output torque decreases proportionately. The same holds true if the output speed decreases, the available output torque increases proportionately.

The correct answer is: Torque

### Question 10

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The most common motor used in the HVAC industry is the \_\_\_\_\_ motor.

Select one:

☐

a.

Split-Phase

b.  
Shaded Pole

c.  
Permanent-Split Capacitor Motor

d.  
Capacitor Start Capacitor Run

#### Feedback

Your answer is correct.

Permanent-split capacitor motor is much like the capacitor start motor in that it has two windings, a start winding (auxiliary winding) with a capacitor in series and the main winding. The purpose of the start winding with the capacitor is to create a rotating magnetic field. The difference is that the capacitor and the start winding remain in the circuit when the motor gets up to rated speed. The advantage being higher efficiency and higher power output. Another difference worth noting is no starting mechanism (centrifugal switch) is needed and the rotation is reversible. Special applications include fans and blowers, air conditioners, coolers, furnaces, unit heaters, roof ventilators, dehumidifiers, garage door openers, and other applications that more torque. ***The permanent-split capacitor motor is by far the most common motor encountered in the HVAC industry.***

The correct answer is: Permanent-Split Capacitor Motor

#### Question 11

b.  
Split phase motors

c.  
PSM motor

d.  
Capacitor Motors

#### Feedback

Your answer is correct.

The correct answer is: Shaded pole motors

#### Question 14

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What type of Single phase motor is considered to have a high starting torque?

Select one:

☐

a.  
Split-phase motor

☐

b.  
Capacitor-start motor

☐

c.  
Shaded pole motor

☒

d.  
Capacitor start-capacitor run motor

#### Feedback

Your answer is correct.

#### **Capacitor Start Capacitor Run**

Capacitor start-capacitor run motor is much like the capacitor start motor in that it has two windings, a start winding (auxiliary winding) in series with a capacitor and centrifugal switch and a main winding. The purpose of the start winding is the same, to get the motor running and add extra starting torque. The difference is that there is a capacitor in parallel with the start winding that does not get remove from the circuit, only the start capacitor gets remove when the motor get up to 75% of rated speed. The purpose of the capacitor that stays in the circuit is to keep the starting winding active and out of phase with the main winding.

Keeping both windings in use will increase torque while the motor is running. This motor is good for higher inertia loads and where frequent starting and stopping are required. It is used to in pumps present in refrigerators, air conditioners, compressor tools and many loads of this nature.

The correct answer is: Capacitor start-capacitor run motor

#### Question **15**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

A device used to alter the electrical power being delivered to a motor for the purpose of speed control is called a VFD. What does VFD stand for?

☐

a.  
Voltage Fluctuating Device

☐

b.  
Variable Flow Device

☐

c.  
Variable Frequency Device

☒

d.  
Voltage Frequency Device

Feedback

Your answer is incorrect.

The correct answer is:  
Variable Frequency Device

Question **16**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

An ECM is used to take alternating current and convert it to a fluctuating direct current at a rate that can be altered. What does ECM stand for?

☐

a.  
Electronic Capacitor Motor

☐

b.

Electronically Controlled Motor

c.  
Electronically Commutated Motor

d.  
Elevated Capacity Motor

#### Feedback

Your answer is correct.

#### ***Electronically Commutated Motors (ECM)***

An ECM controller converts alternating current single phase power to direct current power and then pulses that current at a desired frequency. This allows control over the motors speed in a similar way to a VFD. ECMs are a very efficient way to vary the speed of a motor and they offer some advantages over VFD controlled motors. They are low heat devices, create low startup/shutoff velocities, and quiet while in operation. These advantages are typically applied to HVAC systems and can benefit filter performance, noise, wear on the system, temperature accuracy/spill over, and longevity.

The correct answer is:  
Electronically Commutated Motor

#### Question **17**

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What type of protection method would be necessary to prevent unwanted starting of a motor after a power failure?

a.

Rotational Protection

b.

Overcurrent protection

c.

Thermal protection

d.

Low voltage protection

#### Feedback

Your answer is incorrect.

#### ***Low Voltage Protection***

Low voltage protection (LVP) is primarily used after an interruption in power is experienced. After a power outage it can be important to ensure that some electric motors do not power back on before certain conditions are met, this is where LVP is utilized. This is accomplished through relays and switches that would be part of the motors wiring.

The correct answer is:

Low voltage protection

#### Question **18**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What statement best describes VFD operation?

a.

A VFD is a type of electric motor that can vary the power rating depending on the current load on the motor. It will always have the rated horsepower no matter what load is placed on the motor.

b.

A VFD converts alternating current to pulsing direct current before sending power to the electric motor.

c.

A VFD alters the frequency of AC power to an electric motor. This can alter the speed of the electric motor as a motors speed is directly related to the delivered frequency.

d.

A VFD is a protection device used in all electric motors that can prevent burnout and overheating.

#### Feedback

Your answer is correct.

#### **Variable Frequency Drive**

Variable frequency drive (VFD) is a motor controller placed between the motor and power supply that can change the frequency (Hz) and voltage of the power supplied to an electric motor. Using a VFD will allow you to control the motors speed, power, start velocity, and stop velocity. These devices can be used to save power, match motors to their applications, and even extend the usable life of a motor. VFDs can be integrated into newer smart devices and controllers to use intelligent applications of motor technology. Usually you will find VFD on fans, pumps, and compressors where different operating speeds are a requirement.

The correct answer is:

A VFD alters the frequency of AC power to an electric motor. This can alter the speed of the electric motor as a motors speed is directly related to the delivered frequency.

#### Question **19**

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Select the advantages an electronically commutated motor might have over a motor powered by a variable frequency drive.

a.

Low start and stop velocities

b.

Low heat output

c.  
Reduced power consumption

d.  
More powerful

e.  
Longer life

f.  
Quiet operation

#### Feedback

Your answer is incorrect.

#### Electronically Commutated Motors (ECM)

An ECM controller converts alternating current single phase power to direct current power and then pulses that current at a desired frequency. This allows control over the motors speed in a similar way to a VFD. ECMs are a very efficient way to vary the speed of a motor and they offer some advantages over VFD controlled motors; ***they are low heat devices, create low startup/shutoff velocities, and are quiet while in operation.*** These advantages are typically applied to HVAC systems and can benefit filter performance, noise, wear on the system, temperature accuracy/spill over, and longevity.

The correct answers are:

Low start and stop velocities,

Quiet operation,

Low heat output

What is used to start the rotation of a three phase induction motor as compared to a single phase motor?

Select one:

a.  
Start winding

b.  
Electromagnetic induction

c.  
Higgs accelerator

d.  
Start Capacitor

**Feedback**

Your answer is incorrect.

The correct answer is: Electromagnetic induction

**Question 2**

Correct

Mark 1.00 out of 1.00

Flag question

**Question text**

In reference to motors, the transfer of energy from a magnetic field into a conductor is known as what?

Select one:

a.  
electromagnetic induction

b.  
Centrifugal force

c.  
Inverse induction

d.  
Synchronous phasing

**Feedback**

Your answer is correct.

The correct answer is: electromagnetic induction

**Question 3**

Correct

Mark 1.00 out of 1.00

Flag question

**Question text**

How many Watts of power would be the result of having 5 Amps being pushed by 120 Volts?

Select one:

☐

a.  
24

☐

b.  
360

☐

c.  
0.042

☒

d.  
600

#### Feedback

Your answer is correct.

Power is measured in watts (volts x amps) and a minus voltage times a minus current equals a positive watt.

The correct answer is: 600

#### Question 4

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

#### Question text

The \_\_\_\_\_ is a series of stationary, conductive windings offset electrically at 120 degrees to initiate current flow.

Select one:

☐

a.  
Stator

☐

b.  
Inducer

c.  
Motor

d.  
Rotor

#### Feedback

Your answer is incorrect.

The correct answer is: Stator

#### Question 5

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

The \_\_\_\_\_ is a series of conductive copper bars in high-grade silicon steel formed into a spinning drum.

Select one:

a.  
Capacitor

b.  
Rotor

c.  
Stator

d.  
Inducer

#### Feedback

Your answer is incorrect.

The correct answer is: Rotor

#### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The rate of the rotating magnetic field in the stator is called the \_\_\_\_\_ speed.

Select one:

a.  
Synchronous

b.  
Adjustable

c.  
Slip

d.  
Variable

Feedback

Your answer is correct.

The correct answer is: Synchronous

Question **7**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

\_\_\_\_\_ is measured as a percentage difference between the synchronous and rated speed.

Select one:

a.  
Slip

b.

Torque

c.  
RPM

d.  
Shift

#### Feedback

Your answer is correct.

The correct answer is: Slip

#### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Match the following with the best description of the motor application.

Can be programmed at any time to do whatever job is required. **Answer 1**  
VFD Motor

Typically programmed for a single purpose at the factory. **Answer 2**  
ECM Motor

#### Feedback

Your answer is correct.

The correct answer is: Can be programmed at any time to do whatever job is required. → VFD Motor, Typically programmed for a single purpose at the factory. → ECM Motor

#### Question 9

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Which of the following motors has the ability to convert an AC voltage to DC voltage for its operation?

- a.  
Split capacitor  
☐
- b.  
Single phase induction  
☐
- c.  
Shaded pole  
☐
- d.  
ECM  
☒

#### Feedback

Your answer is correct.

The correct answer is:  
ECM

#### Question 10

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

The three-phase power curve consists of three separate single-phase curves evenly separated. How far apart are these curves spaced?

- ☐
- a.  
45 degrees  
☐
- b.  
120 degrees  
☒
- c.  
90 degrees  
☐
- d.  
60 degrees  
☐

#### Feedback

Your answer is incorrect.

The correct answer is:  
120 degrees

Question **11**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

For the same size, the single-phase induction motors develop about \_\_\_\_\_% of the output as that of three-phase induction motors.

a.  
60

b.  
75

c.  
50

d.  
30

Feedback

Your answer is correct.

The correct answer is:  
50

Question **12**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Identify the image shown.

a.  
Modified DC

b.  
Rectified DC

c.  
Modified AC

d.  
Filtered DC

#### Feedback

Your answer is incorrect.

The correct answer is:  
Filtered DC

Which of the following is a common type of single-phase motor?

a.  
Multi-phase motor

b.  
Induction motor

c.  
Synchronous motor

d.  
AC-DC motor

#### Feedback

Your answer is incorrect.

The correct answer is:  
Induction motor

Question **2**

Correct

Mark 1.0 out of 1.0

Flag question

Question text

What is the starting method commonly used for single-phase motors?

a.  
Delta starter

b.  
ECM

c.  
Capacitor start

d.  
VFD

Feedback

Your answer is correct.

The correct answer is:

Capacitor start

Question **3**

Correct

Mark 1.0 out of 1.0

Flag question

Question text

In a split-phase single-phase motor, what is the purpose of the auxiliary winding?

a.  
To provide a phase shift for starting

b.

To reverse the direction of rotation

☐

c.

To increase the voltage

☐

d.

To regulate the speed

#### Feedback

Your answer is correct.

The correct answer is:

To provide a phase shift for starting

#### Question 4

Correct

Mark 1.0 out of 1.0

Flag question

#### Question text

Which of the following would be a typical application of a shaded-pole single-phase motor?

☐

a.

E-vehicles

☐

b.

Industrial pumps

☐

c.

High-torque applications

☒

d.

Residential HVAC Fan

#### Feedback

Your answer is correct.

The correct answer is:

Residential HVAC Fan

#### Question 5

Incorrect

Mark 0.0 out of 1.0

Flag question

#### Question text

What is the purpose of a run capacitor in a capacitor-start, capacitor-run single-phase motor?

a.

To reverse the motor direction as a result of a phase shift

b.

To improve the power factor

c.

To help start the motor

d.

To provide additional torque during running

#### Feedback

Your answer is incorrect.

The correct answer is:

To provide additional torque during running

#### Question 6

Correct

Mark 1.0 out of 1.0

Flag question

#### Question text

What is the purpose of the centrifugal switch in a split-phase single-phase motor?

a.

To control the torque

b.

To regulate the voltage

c.  
To disconnect the start winding once running

d.  
To control the speed

#### Feedback

Your answer is correct.

The correct answer is:  
To disconnect the start winding once running

#### Question 7

Incorrect

Mark 0.0 out of 1.0

#### Question text

Which component is responsible for creating a rotating magnetic field in a single-phase induction motor?

a.  
Rotor

b.  
Capacitor

c.  
Commutator

d.  
Stator

#### Feedback

Your answer is incorrect.

The correct answer is:  
Stator

#### Question 8

Correct

Mark 1.0 out of 1.0

Flag question

Question text

What is the primary disadvantage of a split-phase motor?

a.  
Time varying frequencies

b.  
Inefficient operation

c.  
Low starting torque

d.  
Limited speed control

Feedback

Your answer is correct.

The correct answer is:  
Low starting torque

Question **9**

Correct

Mark 1.0 out of 1.0

Flag question

Question text

In a 3-phase motor, what is the phase angle between the voltages of each phase?

a.  
60 degrees

b.  
180 degrees

c.

120 degrees

d.  
90 degrees

#### Feedback

Your answer is correct.

The correct answer is:  
120 degrees

#### Question 10

Incorrect  
Mark 0.0 out of 1.0

Flag question

#### Question text

In a 3-phase motor, how is the direction of rotation reversed?

a.  
By changing the voltage

b.  
By changing the frequency

c.  
By reversing the stator windings

d.  
By switching any two phase connections

#### Feedback

Your answer is incorrect.

The correct answer is:  
By switching any two phase connections

#### Question 11

Incorrect  
Mark 0.0 out of 1.0

Flag question

Question text

What is the significance of the term "**slip**" in a 3-phase induction motor?

a.  
It refers to the rotor slipping out of position

b.  
It is the difference between synchronous speed and rotor speed

c.  
It indicates a fault in the stator windings

d.  
It measures the efficiency of the motor

Feedback

Your answer is incorrect.

The correct answer is:

It is the difference between synchronous speed and rotor speed

Question **12**

Correct

Mark 1.0 out of 1.0

Flag question

Question text

What happens to the torque in a 3-phase induction motor as the load increases?

a.  
Decreases

b.  
Remains constant

c.

Reverses direction

d.

Increases

#### Feedback

Your answer is correct.

The correct answer is:

Decreases

Electrical Circuits are opened or closed by the use of a \_\_\_\_\_?

Select one:

a.

Power source

b.

Transformer

c.

Switch

d.

Motor

#### Feedback

Your answer is correct.

The correct answer is: Switch

#### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

A switch that has one pole and one contact is known as \_\_\_\_\_?

Select one:

a.

4PDT

☒

b.

SPST

☐

c.

DPDT

☐

d.

SPDT

#### Feedback

Your answer is correct.

The correct answer is: SPST

#### Question 3

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

If a pole can be thrown in one of two positions it is known as a \_\_\_\_\_?

Select one:

☐

a.

SPDT

☐

b.

Thermal switch

☒

c.

DPDT

☐

d.

Pressure Switch

#### Feedback

Your answer is incorrect.

The correct answer is: SPDT

Question **4**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

If a household electric appliance requires 240 volts to operate, how is that done?

Select one:

☐

a.  
By connecting to the 240 volt supply at the service panel

☐

b.  
Magic

☒

c.  
By connecting to a mechanically joined 120 volt supplies

☐

d.  
By plugging it in to a single gang box

Feedback

Your answer is correct.

The correct answer is: By connecting to a mechanically joined 120 volt supplies

Question **5**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

All wiring diagrams are drawn to show circuits in what state?

Select one:

☐

a.  
Energized

☐

b.  
Closed

☐

c.  
Operating

☒

d.  
At Rest

#### Feedback

Your answer is correct.

The correct answer is: At Rest

What type of switch uses a concave or convex disk of metal to open or close contacts due to changes in temperature?

Select one:

☐

a.  
Flow Switch

☐

b.  
Pressure Switch

☒

c.  
Flame roll-out Switch

☐

d.  
Thermostat

#### Feedback

Your answer is correct.

The correct answer is: Flame roll-out Switch

#### Question 2

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

A type of switch that is constructed to close a set of contacts on a temperature rise, is an example of a \_\_\_\_\_?

Select one:

☐

a.  
High Limit Switch

☐

b.  
Flow Switch

☐

c.  
Fan Switch

☒

d.  
Aquatstat

#### Feedback

Your answer is incorrect.

The correct answer is: Fan Switch

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What type of devices operate on the principle of different metals expanding at different rates, is commonly used in \_\_\_\_\_?

Select one:

☐

a.  
Light Switches

☒

b.  
Thermostats

☐

c.  
Pressure switches

☐

d.  
Thermometers

### Feedback

Your answer is correct.

The correct answer is: Thermostats

#### Question 4

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Thermostats use a type of liquid in a bulb to bridge two contacts and close circuits. What is the liquid used?

Select one:

a.  
Mercury

b.  
Condensate

c.  
Silver

d.  
H2O

### Feedback

Your answer is correct.

The correct answer is: Mercury

#### Question 5

Correct

Mark 1.00 out of 1.00

Question text

In a heat pump thermostat the second stage heating contact controls\_\_\_\_\_?

Select one:

☐

a.  
The limit control

☒

b.  
The operation of supplemental heat

☐

c.  
The refrigeration cycle

☐

d.  
The cooling mode

Feedback

Your answer is correct.

The correct answer is: The operation of supplemental heat

Question **11**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

How can a programmable thermostat be overridden in run mode?

Select one:

☐

- a.  
By adjusting the mechanical linkage
- ☐
- b.  
By changing the wiring
- ☒
- c.  
By depressing the + or – button on the control
- ☐
- d.  
By taking the unit off the wall

#### Feedback

Your answer is correct.

The correct answer is: By depressing the + or – button on the control

Question text

In a combination Fan/ High limit control the fan switch is located on which side of the unit, if looking at the face.

Select one:

☐

a.  
Top

b.  
Right Side

c.  
Bottom

d.  
Left side

#### Feedback

Your answer is incorrect.

The correct answer is: Left side

#### Question 15

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In the combination Fan/ High limit control why would a gas fitter need to remove the brass jumper?

Select one:

a.  
To attach a manual switch to the high limit

b.  
To supply the high limit with 24 volt power

c.  
It is recommended to do so

d.  
To supply the fan switch with 24 volt power

#### Feedback

Your answer is correct.

The correct answer is: To supply the high limit with 24 volt power

#### Question 17

Incorrect  
Mark 0.00 out of 1.00

Flag question

#### Question text

What are the methods for mounting aquastats? (select all that apply)

Select one or more:

☐

a.  
Remote Bulb

☐

b.

Glued in place

c.

Tied with rope

d.

Surface Mounted

e.

Wired connection

f.

Soldered in place

g.

Direct mounted in an immersion well

#### Feedback

Your answer is incorrect.

The correct answers are: Remote Bulb, Surface Mounted, Direct mounted in an immersion well

Pressuretrols are used in what type of system?

Select one:

a.

Furnaces

b.

Hot water tanks

c.

Water boiler systems

d.

Steam Boiler systems

#### Feedback

Your answer is incorrect.

The correct answer is: Steam Boiler systems

Question **2**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Another name for the piping (siphon loop) installed from the boiler to the pressuretrol and pressure gauge is called \_\_\_\_\_?

Select one:

a.  
A pigtail

b.  
A loop de loop

c.  
A spool

d.  
A pipe

#### Feedback

Your answer is correct.

The correct answer is: A pigtail

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In general, an air proving switch is of what basic design?

Select one:

a.  
A manually actuated push button

b.  
A single pole

c.  
A time delay switch

d.

A double pole

Feedback

Your answer is correct.

The correct answer is: A single pole

Question 7

Correct

Mark 1.00 out of 1.00

Flag question

Question text

When the air supply is controlled mechanically, before ignition the blower must do what?

Select one:

a.  
Pre purge the combustion chamber

b.  
Drain the condensate

c.  
Trip the high limit

d.  
Nothing

Feedback

Your answer is correct.

The correct answer is: Pre purge the combustion chamber

Question 8

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What type of switch does the image show?

Select one:

☐

a.  
Double pole switch

☐

b.  
Flow switch

☒

c.  
Normally closed pressure switch

☐

d.  
Normally open pressure switch

#### Feedback

Your answer is correct.

The correct answer is: Normally closed pressure switch

What are two types of L.W.C.O. switches?

Select one:

☐

a.  
Fan switch and Probe type

☐

b.  
Float type and Cold Water type

☐

c.  
Steam type and Hot water type

☒

d.  
Float type and Probe type

#### Feedback

Your answer is correct.

The correct answer is: Float type and Probe type

Question **2**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

In conjunction with steam boilers how many automatic low water cut offs must be installed?

Select one:

☐

a.

2

☐

b.

3

☒

c.

4

☐

d.

None

Feedback

Your answer is incorrect.

The correct answer is: 2

Question **3**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

If a low water cutoff is attached to the boiler by pipe and fittings what must not be places upstream of the L.W.C.O?

Select one:

☐

a.

PRV's

b.  
Check valves

c.  
Shutoff valves of any type

d.  
Globe Valves

#### Feedback

Your answer is correct.

The correct answer is: Shutoff valves of any type

#### Question 4

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

To facilitate cleaning of the lines with L.W.C.O.'s what shall be placed at every right angle turn?

Select one:

a.  
A 90°

b.  
Plugs

c.  
A cross fitting

d.  
A tee

#### Feedback

Your answer is incorrect.

The correct answer is: A cross fitting

#### Question 5

Incorrect  
Mark 0.00 out of 1.00

Flag question

#### Question text

In a hot water heating boiler, the installed L.W.C.O. must be equipped with what device?

Select one:

☐

a.  
A manual reset switch

☒

b.  
An automatic reset

☐

c.  
A ball valve

☐

d.  
A pressure sensor

#### Feedback

Your answer is incorrect.

The correct answer is: A manual reset switch

#### Question 6

Incorrect  
Mark 0.00 out of 1.00

Flag question

#### Question text

At what height are L.W.C.O.'s designed to be installed, according to manufacturer's literature?

Select one:

☐

a.  
Above the highest safe water level

☐

b.  
Above the lowest safe water level

c.  
Above the boiler

d.  
Anywhere

#### Feedback

Your answer is incorrect.

The correct answer is: Above the lowest safe water level

#### Question 7

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

When attaching L.W.C.O.'s to a hot water boiler with pipe what is the minimum size of pipe that can be used?

Select one:

a.  
3/4" NPS

b.  
3" NPS

c.  
1" NPS

d.  
2" NPS

#### Feedback

Your answer is correct.

The correct answer is: 1" NPS

#### Question 8

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

When testing a L.W.C.O. in a hot water boiler install, does the system need to be drained?

Select one:

a.  
Yes

b.  
No

#### Feedback

Your answer is incorrect.

The correct answer is: No

#### Question 9

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What type of switch is indicated by the following symbol?

Select one:

a.  
Normally open pressure switch

b.  
Normally closed temperature switch

c.  
Normally open float switch

d.  
Normally closed float switch

#### Feedback

Your answer is correct.

The correct answer is: Normally open float switch

Can flow switches be used on water lines only?

Select one:

a.  
Yes

b.  
No

c.  
Maybe

d.  
Don't know

#### Feedback

Your answer is correct.

The correct answer is: No

#### Question 2

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

A flow switch designed to sense air movement is known as?

Select one:

a.  
A sail switch

b.  
An air switch

c.  
A boat switch

d.  
A rudder switch

#### Feedback

Your answer is correct.

The correct answer is: A sail switch

How many contacts are on a SPDT switch?

Select one:

a.  
none

b.  
three

c.  
Two

d.  
One

#### Feedback

Your answer is incorrect.

The correct answer is: Two

#### Question 2

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Switches can be operated by hand or they can be activated in response to changes in :

Select one or more:

☐

a.  
Magnetism

☐

b.  
Temperature

☒

c.  
Color

☒

d.  
smell

☐

e.  
Pressure

☐

f.  
Fluid Movement

☒

g.  
Space

#### Feedback

Your answer is incorrect.

The correct answers are: Temperature, Pressure, Fluid Movement, Magnetism

#### Question 3

Partially correct

Mark 0.75 out of 1.00

Flag question

#### Question text

Select four switches that are activated in response to changes in temperature :

Select one or more:

☐

a.  
Flow Switch

☐

b.  
Pressure Switch

c.  
Flame Roll-out

d.  
High Limit Switch

e.  
Fan Switch

f.  
Thermostat Switch

g.  
Vacuum Switch

#### Feedback

Your answer is partially correct.

You have correctly selected 3.

The correct answers are: Thermostat Switch, Fan Switch, High Limit Switch, Flame Roll-out

#### Question 4

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the operating principle for bimetal switches?

Select one:

a.  
Different weight

b.  
Different density

c.  
Different melting points

d.

Different coefficient of expansion

e.

Different standard of conductivity

### Feedback

Your answer is correct.

These devices use the warping action created when two dissimilar metals having different coefficients of expansion are joined together.

The correct answer is: Different coefficient of expansion

### Question 5

Partially correct

Mark 0.67 out of 1.00

Flag question

### Question text

Complete the description of the switch illustrated below.

A normally  switch that  on a  in temperature.

### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answer is:

Complete the description of the switch illustrated below.

A normally [closed] switch that [opens] on a [rise] in temperature.

### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Select the property a spiral bimetal strip uses in mechanical thermostat to tip the mercury and completes the circuit.

Select one:

a.  
expansion and contraction

b.  
elasticity

c.  
malleability

d.  
tensile strength

e.  
conductivity

f.  
density

#### Feedback

Your answer is correct.

As the room cools, the bimetal strip contracts and moves the glass bulb. The mercury in the bulb engulfs the two contacts completing the circuit energizing the gas valve.

The correct answer is: expansion and contraction

#### Question 7

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the purpose of a heat anticipator?

Select one:

☐

a.

Avoid over-firing of the furnace

☐

b.

Activate heating or cooling in fast temperature change situations

☒

c.

Avoid overshooting room temperature

☐

d.

Balance the temperature across heating zones

#### Feedback

Your answer is correct.

To reduce the response time of the thermostat and reduce overshooting of the room temperature ?

The correct answer is: Avoid overshooting room temperature

#### Question 8

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What do the numbers on a heat anticipator indicate?

Select one:

☐

a.

Amperage

☐

b.

Temperature Range

☒

c.

Millivoltage

d.  
Voltage

#### Feedback

Your answer is incorrect.

Amperage through the coil of the anticipator

The correct answer is: Amperage

#### Question 9

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

When is a heat anticipator energized?

Select one:

a.  
Once the internal temperature reaches its set minimum

b.  
Once the internal temperature reaches its set maximum

c.  
When the thermostat open its contacts

d.  
When the thermostat closes its contacts

#### Feedback

Your answer is incorrect.

The correct answer is: When the thermostat closes its contacts

#### Question 10

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Is a cooling anticipator wired in series or parallel to the thermostat?

Select one:

a.  
Parallel

b.  
Series

c.  
Series and Parallel

### Feedback

Your answer is incorrect.

The correct answer is: Parallel

### Question 11

Partially correct

Mark 0.57 out of 1.00

Flag question

### Question text

Identify the wiring terminals on the thermostat in the image with their purpose.

First stage cooling from the thermostat	Answer 1 Y
Neutral from the thermostat to the transformer	Answer 2 C
First stage heating from the thermostat	Answer 3 R
Second stage cooling from the thermostat	Answer 4 Y2
Power from the thermostat to the fan motor relay	Answer 5 G
Second stage heating from the thermostat	Answer 6 W
Power supply to the thermostat	Answer 7 W2

### Feedback

Your answer is partially correct.

You have correctly selected 4.

The correct answer is: First stage cooling from the thermostat → Y, Neutral from the thermostat to the transformer → C, First stage heating from the thermostat → W, Second stage cooling from the thermostat → Y2, Power from the thermostat to the fan motor relay → G, Second stage heating from the thermostat → W2, Power supply to the thermostat → R

### Question 12

Partially correct

Mark 2.00 out of 4.00

Flag question

### Question text

Using the picture below please complete the following information.

90 degrees F = Answer

150 degrees F = Answer

200 degrees F = Answer

Is there a summer switch on this unit? Answer

Question **13**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the purpose of an operating aquastat?

Select one:

☐

a.  
To maintain the boiler water temperature.

☐

b.  
To ensure the boiler water temperature does not drop below a set value.

☐

c.  
To ensure a consistent safe working pressure

☒

d.  
To ensure the boiler water temperature does not exceed a set value.

Feedback

Your answer is incorrect.

To maintain the boiler water temperature.

The correct answer is: To maintain the boiler water temperature.

Question **14**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the typical setting for a high limit aquastat?

Select one:

a.  
200 °F (93 °C)

b.  
250 °F (121 °C)

c.  
180 °F (82 °C)

d.  
140 °F (60 °C)

#### Feedback

Your answer is correct.

The correct answer is: 200 °F (93 °C)

#### Question 15

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Below are the three mounting methods used for aquastats, which method uses an immersion well?

Remote Bulb

Surface Mounted (Strap-on)

Direct Mounted

Select one:

a.  
All options use an immersion well

b.  
Surface Mounted

c.

Direct Mounted

d.

Remote Bulb

### Feedback

Your answer is incorrect.

The correct answer is: Direct Mounted

Question **16**

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

### Question text

What is usually applied to the inside of the immersion well prior to inserting the sensing bulb ?

Select one:

a.

Pipe dope

b.

Silicon gel

c.

Teflon paste

d.

Conductive Paste

### Feedback

Your answer is incorrect.

The correct answer is: Conductive Paste

Question **17**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What term is used to describe a pressure switch that controls the operation of a steam boiler?

Answer |

Feedback

The correct answer is: pressuretrol

Question **18**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Gas pressure switches are required to be installed on burner systems that exceed Answer  100 psi according to the B149.3 gas code.

Feedback

The correct answer is: 0.5

Question **19**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

How many sensing tubes would you expect to see on a pressure switch that is connected to a draft inducer fan serving a single stage conventional appliance?

Select one:

a.

1

b.  
2

c.  
3

d.  
4

#### Feedback

Your answer is correct.

Draft inducer fan conventional appliance - one

Single stage condensing – two

Two stage – two pressure switches

Modulating input – three pressure switches

The correct answer is: 1

#### Question 20

Partially correct

Mark 0.67 out of 1.00

Flag question

#### Question text

Complete the description of the switch illustrated below.

Normally  pressure switch that  on a  in pressure.

#### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answer is:

Complete the description of the switch illustrated below.

Normally [open] pressure switch that [closes] on a [drop] in pressure.

Question **21**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What are the two basic types of low water cut-offs?

Select one or more:

☐

a.  
Concentric

☐

b.  
Eccentric

☒

c.  
Probe

☐

d.  
Sub-surface

☐

e.  
Injector

☒

f.  
Float

#### Feedback

Your answer is correct.

The correct answers are: Float, Probe

Question **22**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Where would you find the low water cut-off located on a steam boiler?

Select one:

☐

a.  
On the bottom of the boiler 2 inches above the low water level

☐

b.  
Above the boiler

☐

c.  
Not required on steam boilers

☒

d.  
On the side of the boiler at the minimum water level

Feedback

Your answer is correct.

The correct answer is: On the side of the boiler at the minimum water level

Question **23**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Identify the switch illustrated below :

Select one:

a.  
Pressure Switch

b.  
Temperature Switch

c.  
Flow Switch

d.  
Rocker Switch

#### Feedback

Your answer is incorrect.

The correct answer is: Flow Switch

#### Question 24

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Referring to the illustration below, if the SPST switch contacts are closed, would the circulating pump be energized?

Select one:

Yes

No

### Feedback

Your answer is correct.

Yes, the SPST switch will energize the relay coil and close the normally open contacts

The correct answer is: Yes

### Question 25

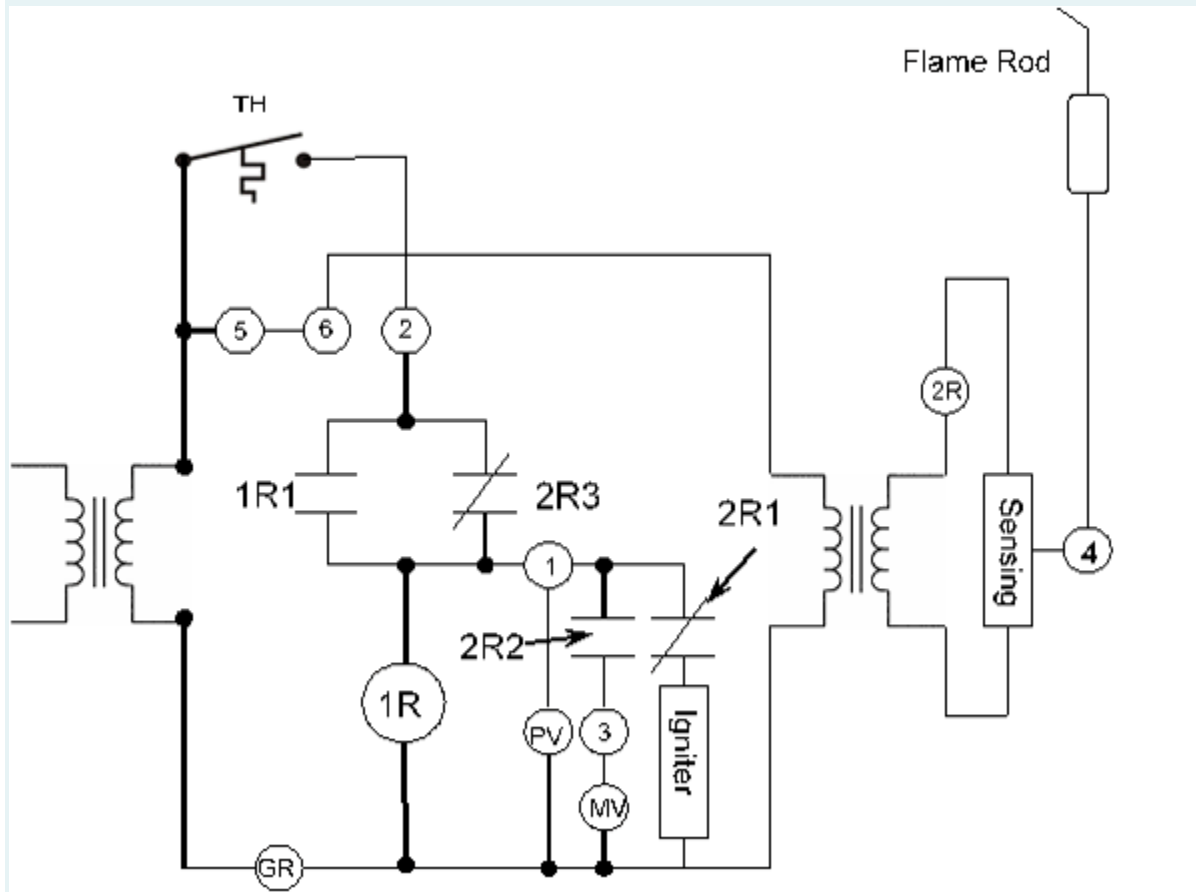

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Referring to the illustration below, which contacts will be controlled by relay coil 2R?

Select one or more:

☐

a.  
2R1

☐

b.  
2R3

☒

c.  
1R

☐

d.  
2R2

☐

e.  
1R1

Feedback

Your answer is incorrect.

2R1, 2R2 and 2R3

When the relay coil 2R is energized; 2R1 opens, 2R2 closes and 2R3 opens.

The correct answers are: 2R1, 2R2, 2R3

Question **26**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Why would a contactor be used rather than a standard relay?

Select one:

a.  
Appliances over 250MBH

b.  
Higher Amperage

c.  
Lower Amperage

d.  
Lower Voltage

e.  
Higher Voltage

Feedback

Your answer is correct.

The correct answer is: Higher Amperage

Question **27**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Why do vent dampers also include an end switch?

Select one:

a.

To prove the damper is fully open prior to igniting the burners

b.

To allow for a 30 second time delay.

c.

Signals the profile plates and allows time for them to adjust before the fan turns on.

d.

To prove the zone valve is fully open before the pump turns on.

Feedback

Your answer is correct.

The correct answer is: To prove the damper is fully open prior to igniting the burners

Question **28**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the most common voltage required for zone valve motors ?

Select one:

a.

20-30 millivolts

b.

250-750 millivolts

c.  
240 volt

d.  
24 volt

#### Feedback

Your answer is correct.

The correct answer is: 24 volt

#### Question 29

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

When the zone valve motor is energized does current immediately flow through the end switch?

Select one:

Yes

No

#### Feedback

Your answer is correct.

No, the valve must be fully open to close the end switch.

The correct answer is: No

#### Question 30

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the purpose of a transformer?

Select one:

a.  
Decrease AC voltage

b.  
Transform AC voltage to DC voltage

c.  
Increase AC voltage

d.  
Increase or Decrease AC voltage

#### Feedback

Your answer is correct.

The correct answer is: Increase or Decrease AC voltage

#### Question 31

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

In a step down transformer the primary side will have  windings when compared to the secondary side.

#### Feedback

Your answer is incorrect.

The correct answer is:

In a step down transformer the primary side will have [more] windings when compared to the secondary side.

#### Question 32

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What term is used to describe the process of generating electricity in the secondary winding's of a transformer?

Select one:

☐

a.  
Phase

☐

b.  
Conduction

☒

c.  
Induction

☐

d.  
Frequency

#### Feedback

Your answer is correct.

The correct answer is: Induction

#### Question 33

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

A transformer would have multiple tapings for different frequencies or to create a number of different amperages .

#### Feedback

Your answer is incorrect.

The correct answer is:

A transformer would have multiple tapings for different [voltages] or to create a number of different [voltages].

#### Question 34

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What would be the VA rating of a 120/24 volt transformer that is able to deliver 1.667 Amps?

VA = Answer

4

#### Feedback

$$VA (W) = V \times A$$

$$VA = 24 V \times 1.667 A$$

$$VA = 40$$

The correct answer is: 40.008

#### Question 35

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

How many 24 volt zone valves could be operated from a 120/24 volt transformer with a 40 VA rating if each zone valve required 0.32 Amps?

Answer: .55

#### Feedback

$$A = \frac{VA}{V} \quad A = \frac{VA}{V}$$

$$A = \frac{40VA}{24V} \quad A = \frac{40VA}{24V}$$

$$A = 1.667A \quad A = 1.667$$

$$1.667A \div 0.32A = 5.21$$

Therefore you could operate **5** 24volt zone valves.

The correct answer is: 5

#### Question 36

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Referring to the illustration below, this electrical symbol represents which one of the following electrical components?

Select one:

a.  
A relay coil

b.  
An adjustable capacitor

c.  
A variable resistor

d.  
A tapped transformer

Feedback

Your answer is incorrect.

The correct answer is: A variable resistor

Question **37**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which of the following is not a consideration when installing a new thermostat for a furnace?

Select one:

a.

The Btuh rating of the thermostat must match the Btuh rating of the furnace.

b.

The voltage designation of the thermostat must match the voltage of the control circuit.

c.

The thermostat must be installed in a location to ensure that it is monitoring the ambient house temperature.

d.

The amperage designation on the heat anticipator must be adjusted to the rating of the gas valve.

#### Feedback

Your answer is correct.

The correct answer is: The Btuh rating of the thermostat must match the Btuh rating of the furnace.

#### Question 38

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

The furnace fan control contacts open when the circulating air :

Select one:

a.

cools down

b.

warms up

c.

starts flowing

d.

stops flowing

#### Feedback

Your answer is incorrect.

The correct answer is: cools down

#### Question 39

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Which of the following would be classified as a normally “open” switch?

Select one:

☐

a.  
High limit switch

☒

b.  
Flame roll-out switch

☐

c.  
Automatic fan switch

☐

d.  
High limit pressuretrol

#### Feedback

Your answer is incorrect.

The correct answer is: Automatic fan switch

#### Question 40

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

The electrical symbol illustrated below represents which one of the following electrical components?

CR

Select one:

☐

a.

A circulating pump

☒

b.

A relay coil

☐

c.

A variable resistor

☐

d.

A centrifugal switch

Feedback

Your answer is correct.

The correct answer is: A relay coil

Question **41**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the typical fan-off setpoint for a combination high-limit/fan control?

Select one:

☒

a.

150 °F (65 °C)

☐

b.

200 °F (93 °C)

☐

c.

20 °F (9°C) above the fan-on setpoint

☐

d.

20 °F (9°C) above the thermostat setpoint

Feedback

Your answer is incorrect.

The correct answer is: 20 °F (9°C) above the thermostat setpoint

Question **42**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the typical setting for a high limit aquastat ?

Select one:

☐

a.

180 F

☐

b.

250 F

☒

c.

200 F

☐

d.

140 F

Feedback

Your answer is correct.

The correct answer is: 200 F

96

#2 and #4 = Answer

Volts

What are the two components necessary for combustion safety circuit utilizing a standing pilot?

Select one:

☐

a.  
Thermopile

☐

b.  
High limit and fan switch

☐

c.  
Gas valve

☒

d.  
Thermocouple and a safety shutoff valve

### Feedback

Your answer is correct.

The correct answer is: Thermocouple and a safety shutoff valve

### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

In the combustion safety circuit what is the purpose of a thermocouple?

Select one:

☒

a.  
Power supply

☐

b.

Heat generator

c.

Limit switch

d.

POC Detector

#### Feedback

Your answer is correct.

The correct answer is: Power supply

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Approximately how many volts will a thermocouple generate?

Select one:

a.

40 – 50 millivolts

b.

20 – 30 volts

c.

20 – 30 millivolts

d.

25 – 45 volts

#### Feedback

Your answer is correct.

The correct answer is: 20 – 30 millivolts

#### Question 4

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

A thermocouple is made of two dissimilar metals joined together at one end, what is the term used for that connection?

Select one:

☐

a.  
Cold junction

☐

b.  
Bimetal strip

☒

c.  
Hot junction

☐

d.  
Magnetic field

#### Feedback

Your answer is correct.

The correct answer is: Hot junction

#### Question 5

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In a thermocouple, the temperature difference between the hot junction and the cold junction produces the greatest amount of voltage, how much of the thermocouple's hot junction should be heated?

Select one:

☐

a.  
 $1/8'' - 3/8''$

b.  
 $1/2'' - 3/4''$

c.  
 $5/8'' - 1''$

d.  
 $3/8'' - 1/2''$

#### Feedback

Your answer is correct.

The correct answer is:  $3/8'' - 1/2''$

#### Question 6

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

According to the CSA B149.3 code, thermocouples are limited to combustion safety circuits that have standing pilots, and to what input BTU rating?

Select one:

a.  
400 000 Btu

b.  
1 000 000 Btu

c.  
500 000 Btu

d.  
1 200 000 Btu

#### Feedback

Your answer is incorrect.

The correct answer is: 400 000 Btu

#### Question 7

Correct  
Mark 1.00 out of 1.00

Flag question

#### Question text

Thermocouples used in low volume appliances in conjunction with a gas that has a specific gravity greater than 1.0, shall have a maximum flame failure response time of?

Select one:

☐

a.  
40 seconds

☐

b.  
90 seconds

☐

c.  
120 seconds

☒

d.  
20 seconds

#### Feedback

Your answer is correct.

The correct answer is: 20 seconds

#### Question 8

Correct  
Mark 1.00 out of 1.00

Flag question

#### Question text

Another type of device that operates similarly to a thermocouple is known as?

Select one:

☐

a.  
Pilot Flame

☐

- b.  
DC Generator
- ☐
- c.  
Thermocouple
- ☒
- d.  
Pilot Generator

#### Feedback

Your answer is correct.

The correct answer is: Pilot Generator

#### Question 9

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

Thermopiles create enough voltage to supply power to the combustion safety circuit as well as?

Select one:

- ☐
- a.  
The Transformer
- ☐
- b.  
The Limiting Devices
- ☐
- c.  
The Gas Valve
- ☒
- d.  
The Control Circuit

#### Feedback

Your answer is correct.

The correct answer is: The Control Circuit

#### Question 10

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In 100% safe systems, the valve shuts off the gas to both the main burner and the pilot burner. For non-100% (or 80%) safe systems the valve shuts off the gas to what device only.

Select one:

☐

a.  
Pilot Burner

☐

b.  
Gas Valve

☒

c.  
Main Burner

☐

d.  
The Meter

#### Feedback

Your answer is correct.

The correct answer is: Main Burner

#### Question 11

Incorrect

Mark 0.00 out of 1.00

#### Question text

An appliance with a flame sensor has an input greater than 120 KW what is the maximum FFRT (Flame Failure Response Time)?

Select one:

☐

a.  
4 seconds

b.  
12 seconds

c.  
90 seconds

d.  
20 seconds

#### Feedback

Your answer is incorrect.

The correct answer is: 4 seconds

#### Question 12

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the most common flame sensing device for appliances under 1,000,000 Btu?

Select one:

a.  
Thermostat

b.  
Thermometer

c.  
Flame Rod

d.  
Pyrometer

#### Feedback

Your answer is correct.

The correct answer is: Flame Rod

#### Question 13

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Flame rods are typically made from what material?

Select one:

☐

a.  
Babbitt alloys

☐

b.  
Brass alloys

☒

c.  
Kanthol and Global alloys

☐

d.  
Kryptonite alloys

#### Feedback

Your answer is correct.

The correct answer is: Kanthol and Global alloys

#### Question 14

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is the current that is generally conducted through a flame?

Select one:

☐

a.  
2 - 4 kA

☐

b.  
2 – 4 A

c.  
2 – 4  $\mu\text{A}$

d.  
2 – 4 mA

#### Feedback

Your answer is incorrect.

The correct answer is: 2 – 4  $\mu\text{A}$

#### Question 15

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Optical flame detectors are divided into three groups, the detection type that scans the visible light spectrum is known as?

Select one:

a.  
Photo Cells

b.  
Gas Filled Detection Tubes

c.  
Light Detection Amalgam

d.  
Lead Sulfide Cells

#### Feedback

Your answer is incorrect.

The correct answer is: Photo Cells

#### Question 16

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

UV flame detectors respond to UV sources in a flame. However, it is possible for the detector to respond to other sources of UV radiation such as? (select all that apply)

Select one or more:

☐

a.  
Incandescent lights

☒

b.  
Halogen Lights

☒

c.  
Hot Refractory

☐

d.  
Grinding Sparks

☐

e.  
Flash Lights

☒

f.  
Welding Arcs

☒

g.  
Spark Ignition

### Feedback

Your answer is correct.

The correct answers are: Hot Refractory, Spark Ignition, Welding Arcs, Halogen Lights

Control circuits can be broken down into three categories, devices in that circuit are known as operating control, safety controls, and \_\_\_\_\_?

Select one:

☒

a.  
Actuators

b.  
Limits

c.  
Pumps

d.  
Switches

#### Feedback

Your answer is correct.

The correct answer is: Actuators

#### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Operating controls have adjustable set points and some type of sensing element used to sense? (select all that apply)

Select one or more:

a.  
Specific weight

b.  
Color

c.  
Temperature

d.  
Density

e.  
Pressure

#### Feedback

Your answer is correct.

The correct answers are: Temperature, Pressure

**Question 3**

Correct

Mark 1.00 out of 1.00

Flag question

**Question text**

Safety switches are designed to shut off what device if there is an unsafe condition present?

Select one:

☐

a.  
The Appliance Power Supply

☐

b.  
The Fan or Pump

☒

c.  
The Gas Valve

☐

d.  
The Control Board

**Feedback**

Your answer is correct.

The correct answer is: The Gas Valve

**Question 4**

Incorrect

Mark 0.00 out of 1.00

Flag question

**Question text**

In a gas dryer which device would be considered a safety limit?

Select one:

a.  
Door Switch

b.  
Gas Valve

c.  
Thermostat

d.  
Aquastat

#### Feedback

Your answer is incorrect.

The correct answer is: Door Switch

#### Question 5

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

For an intermittent pilot system, if the control module sensed an overheating condition and the high limit opened its contacts, what would be de-energized?

Select one:

a.  
The Gas Valve

b.  
The Control board

c.  
The Thermostat

d.  
The Transformer

#### Feedback

Your answer is incorrect.

The correct answer is: The Transformer

Question **6**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Control modules with electronic ignition were designed to facilitate the operation of appliances where access was difficult, or where frequent pilot outages would occur because of \_\_\_\_\_?

Select one:

a.  
Wind

b.  
Sun

c.  
Clouds

d.  
Rain

Feedback

Your answer is correct.

The correct answer is: Wind

Question **7**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

On most appliances that use a DSI, the ignition module will go into lock-out mode after \_\_\_\_\_ attempts to detect a flame.

Select one:

☐

a.

5

☐

b.

2

☒

c.

3

☐

d.

4

#### Feedback

Your answer is correct.

The correct answer is: 3

#### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

A HSI has an element that is made from what material?

Select one:

☐

a.

Carbon Tetrasulphate

☒

b.

Silicon Carbide

☐

c.

Tetrasodium Pyrophosphate

☐

d.

Polychloroprene

#### Feedback

Your answer is correct.

The correct answer is: Silicon Carbide

Question **9**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the most common reason for failure of an HSI's?

Select one:

☐

a.

It is improperly connected.

☐

b.

It is covered in soot.

☐

c.

It is wet.

☒

d.

It is cracked.

#### Feedback

Your answer is correct.

The correct answer is: It is cracked.

In a forced air furnace the fan's operation can be controlled by what? (select all that apply)

Select one or more:

☐

a.

Flow sensing Switches

☒

b.

Timer actuated switches

☒

c.

Temperature-actuated switches

d.  
Motor rotation sensors

e.  
Pressure sensing Switches

#### Feedback

Your answer is correct.

The correct answers are: Temperature-actuated switches, Timer actuated switches

#### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

The difference in temperature between the fan-on and fan-off setting is called?

Select one:

a.  
The fan sensor

b.  
The vent differential

c.  
The controller

d.  
The fan control differential

#### Feedback

Your answer is correct.

The correct answer is: The fan control differential

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

When replacing temperature-activated switches it is recommended that the switches be reinstalled in what location?

Select one:

☐

a.  
Near the outlet of the fan

☒

b.  
Near the heat exchanger

☐

c.  
Near the gas valve

☐

d.  
Near the bottom of the unit

#### Feedback

Your answer is correct.

The correct answer is: Near the heat exchanger

#### Question 4

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Using a timer actuated heat on and heat off fan switch, delays can be adjusted, it is recommended that these switches be set initially to what timing?

Select one:

☐

a.  
30 sec Heat On, 60 Sec Heat Off

☒

b.  
Factory Setting

☐

c.  
45 sec Heat On, 60 Sec Heat Off

☐

d.  
15 sec Heat On, 90 Sec Heat Off

#### Feedback

Your answer is correct.

The correct answer is: Factory Setting

#### Question 5

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What are three classifications of furnaces?

Select one or more:

☒

a.  
High Boy

☐

b.  
Low flow

☒

c.  
Horizontal

☐

d.  
Counter-flow

☐

e.  
CFM

☐

f.  
Up draft

g.  
Low Boy

h.  
Vertical

#### Feedback

Your answer is correct.

The correct answers are: High Boy, Low Boy, Horizontal

#### Question 6

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

Furnaces that utilize mono-port inshot burners can be installed in what orientation?

Select one:

a.  
Any of the options

b.  
Up flow

c.  
Down flow

d.  
Horizontal right

e.  
Horizontal left

#### Feedback

Your answer is correct.

The correct answer is: Any of the options

#### Question 7

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The difference in temperature between the air entering the blower chamber from the cold air return plenum and the hot air leaving the supply plenum is the definition of \_\_\_\_\_?

Select one:

☐

a.  
Delta T

☐

b.  
Design Temperature

☒

c.  
Temperature Rise

☐

d.  
Temperature Difference

### Feedback

Your answer is correct.

The correct answer is: Temperature Rise

### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

To determine temperature rise in a furnace it is recommended that a hole be drilled in the supply and return plenums to accommodate a thermometer.

Select one:

☒

a.  
True

b.  
False

#### Feedback

Your answer is correct.

The correct answer is: True

#### Question 9

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Temperature rise is controlled by the fan speed, to reduce the temperature rise the fan speed must be \_\_\_\_\_?

Select one:

a.  
Decreased

b.  
Increased

c.  
Factory set

d.  
No adjustment is possible

#### Feedback

Your answer is incorrect.

The correct answer is: Increased

#### Question 10

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Fan motors are of two types' \_\_\_\_\_ and \_\_\_\_\_?

Select one or more:

☐

a.  
Geared

☒

b.  
Belt Drive

☐

c.  
Indirect Drive

☒

d.  
Direct Drive

#### Feedback

Your answer is correct.

The correct answers are: Direct Drive, Belt Drive

#### Question **11**

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

#### Question text

Wiring for a multi speed fan motor in high speed is accomplished in general by connecting the \_\_\_\_\_ wire.

Select one:

☐

a.  
Brown

☒

b.  
Red

☐

c.  
Black

☐

d.  
White

**Feedback**

Your answer is incorrect.

The correct answer is: Black

**Question 12**

Correct

Mark 1.00 out of 1.00

Flag question

**Question text**

ESP is the abbreviation for?

Select one:

a.  
Extra Sensory Perception

b.  
Excess to Supply Plenum

c.  
Extra Speeds Possible

d.  
External Static Pressure

**Feedback**

Your answer is correct.

The correct answer is: External Static Pressure

elect the correct order for the sequence of operation for a furnace utilizing a standing pilot:

2

- The automatic gas valve opens

4

- When the call for heat is satisfied, the thermostat opens its contacts de-energizing the gas valve.

1

- The thermostat calls for heat

5

- Once the heat exchanger cools to the fan-off setpoint, the fan motor is de-energized

3

- When the heat exchanger reaches the fan-on setpoint the fan motor is energized

### Feedback

Your answer is correct.

The correct answer is:

Select the correct order for the sequence of operation for a furnace utilizing a standing pilot:

[2] - The automatic gas valve opens

[4] - When the call for heat is satisfied, the thermostat opens its contacts de-energizing the gas valve.

[1] - The thermostat calls for heat

[5] - Once the heat exchanger cools to the fan-off setpoint, the fan motor is de-energized

[3] - When the heat exchanger reaches the fan-on setpoint the fan motor is energized

### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the primary purpose of a combustion safety circuit?

Select one:

a.

To detect the presence or absence of a flame

b.

To ensure proper gas flow to the burner

c.

To ensure proper air flow to the combustion chamber

d.

To check for complete or incomplete combustion

### Feedback

Your answer is correct.

The correct answer is: To detect the presence or absence of a flame

### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

How does a thermocouple generate electricity?

Two  metals are joined at one end called the  junction. When heat is applied electricity is created.

### Feedback

Your answer is correct.

The correct answer is:

How does a thermocouple generate electricity?

Two [dissimilar] metals are joined at one end called the [hot] junction. When heat is applied electricity is created.

### Question 4

Partially correct

Mark 0.50 out of 1.00

Flag question

### Question text

Select all that apply in reference to a 100% and an 80% combustion safety circuit:

Select one or more:

☒

a.

A 100% safe system cuts off the supply to both the pilot and the main burner

☐

b.

An 80% safe system cuts off the supply to both the pilot and the main burner

c.

A 100% safe system cuts off the supply to the pilot but not the main burner

d.

An 80% safe system cuts off the supply to the main burner but not the pilot

### Feedback

Your answer is partially correct.

You have correctly selected 1.

100% safe combustion safety circuit.

During pilot outage the gas supply is terminated to both the main burner and the pilot burner.

80% safe combustion safety circuit.

During pilot outage the gas supply is terminated to the main burner only.

The correct answers are: A 100% safe system cuts off the supply to both the pilot and the main burner, An 80% safe system cuts off the supply to the main burner but not the pilot

### Question 5

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the maximum flame failure response time (FFRT) in seconds for an appliance with an input of 400,000 Btuh (120 kW) or less, fired on natural gas?

Select one:

a.

30

b.

90

c.

60

d.

120

### Feedback

Your answer is correct.

The correct answer is: 90

#### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the maximum FFRT in seconds for an appliance with an input greater than 400,000 Btuh (120 kW) ?

Select one:

☐

a.

6

☒

b.

4

☐

c.

8

☐

d.

30

☐

e.

60

☐

f.

5

### Feedback

Your answer is correct.

The correct answer is: 4

#### Question 7

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Why would a thermopile be used rather than a thermocouple ?

Select one:

☐

a.  
To provide a higher level of protection.

☐

b.  
To provide power to the damper motor as well as the combustion safety circuit.

☒

c.  
To not only power the combustion safety circuit but also the control circuit

☐

d.  
When used in conjunction with a hot surface igniter.

Feedback

Your answer is correct.

The correct answer is: To not only power the combustion safety circuit but also the control circuit

Question 8

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Which flame safeguards are used for appliances that have electronic ignition systems?

Select one or more:

☐

a.  
HSI

☐

b.  
Thermocouples

c.  
Flame rods

d.  
Thermopiles

e.  
DSI

f.  
Optical detectors

#### Feedback

Your answer is incorrect.

The correct answers are: Flame rods, Optical detectors

#### Question 9

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Which is the most common flame safeguard encountered in appliances with inputs less than 1,000 MBH (293 kW) that have electronic ignition systems?

Select one:

a.  
Thermocouples

b.  
Optical detectors

c.  
Flame rods

d.  
Thermopiles

#### Feedback

Your answer is incorrect.

The correct answer is: Flame rods

Question **10**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Flame rods are typically made of which materials?

Select one or more:

☐

a.  
Refractory

☐

b.  
Sodium bicarbonate

☐

c.  
Silicon iron

☒

d.  
Globar

☐

e.  
Silver

☒

f.  
Kanthol

Feedback

Your answer is correct.

The correct answers are: Kanthol, Globar

Question **11**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the anticipated current through a flame rod ?

Select one:

☐

a.  
1 - 2 micro-amps

☐

b.  
4 - 6 micro-amps

☒

c.  
2 –4 micro-amps

☐

d.  
6 - 8 micro-amps

### Feedback

Your answer is correct.

The correct answer is: 2 –4 micro-amps

### Question 12

Partially correct

Mark 0.33 out of 1.00

[Flag question](#)

### Question text

What are the three types of optical flame detectors used on gas equipment and which part of the flame spectrum do they sense?

Select one or more:

☐

a.  
Photocells - Visible light

☒

b.  
Lead Sulphide (PbS) Cells - Ultraviolet light

☐

c.  
Lead Sulphide (PbS) Cells - Infrared light

☐

d.

Photocells - Ultraviolet light

e.

UV Detectors - Ultraviolet light

#### Feedback

Your answer is partially correct.

You have correctly selected 1.

The correct answers are: UV Detectors - Ultraviolet light, Photocells - Visible light, Lead Sulphide (PbS) Cells - Infrared light

#### Question 13

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the minimum difference in area between the grounding electrode and the flame rod in order for a flame rectification system to function?

Select one:

a.

2 : 1

b.

4 : 1

c.

10 : 1

d.

6 : 1

#### Feedback

Your answer is correct.

The correct answer is: 4 : 1

#### Question 14

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is meant by the term "Flame Flicker Frequency"?

Select one:

☐

a.

A small amount of electricity produced by the flames movement.

☐

b.

The cycle frequency of small explosions of fuel and oxygen.

☐

c.

A flames characteristic that mimics sound frequency.

☒

d.

A way of measuring the amount of times an appliance turns on and off in one 24 hour period.

Feedback

Your answer is incorrect.

The correct answer is: The cycle frequency of small explosions of fuel and oxygen.

Question **15**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which part of a gas flame emits the highest percentage of ultraviolet radiation?

Select one:

☐

a.

Last 1/3 of the flame

☐

b.

Second 1/3 of the flame

c.

The entire flame

d.

First 1/3 of the flame

#### Feedback

Your answer is correct.

The correct answer is: First 1/3 of the flame

#### Question 16

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Please match the following statements with the proper name.

Operating

controls have an adjustable setpoint and contain a sensing element and a switch that responds to changes in the medium being sensed and makes or breaks the control circuit.

Limit

controls shutoff the gas valve if continued operation would cause an unsafe condition.

#### Feedback

Your answer is correct.

The correct answer is:

Please match the following statements with the proper name.

[Operating] controls have an adjustable setpoint and contain a sensing element and a switch that responds to changes in the medium being sensed and makes or breaks the control circuit.

[Limit] controls shutoff the gas valve if continued operation would cause an unsafe condition.

Question **17**

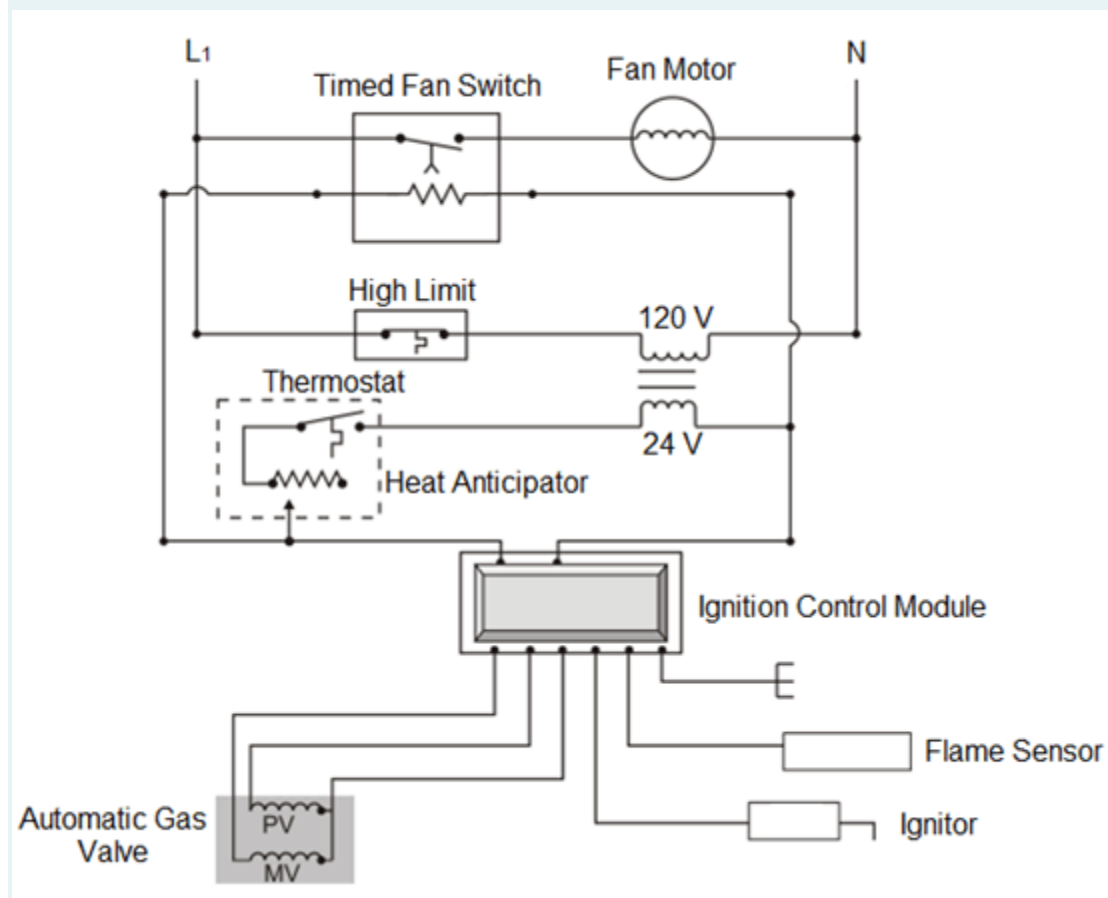

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Referring to the diagram below, identify the operating control and the limit control.

The  is the operating control.

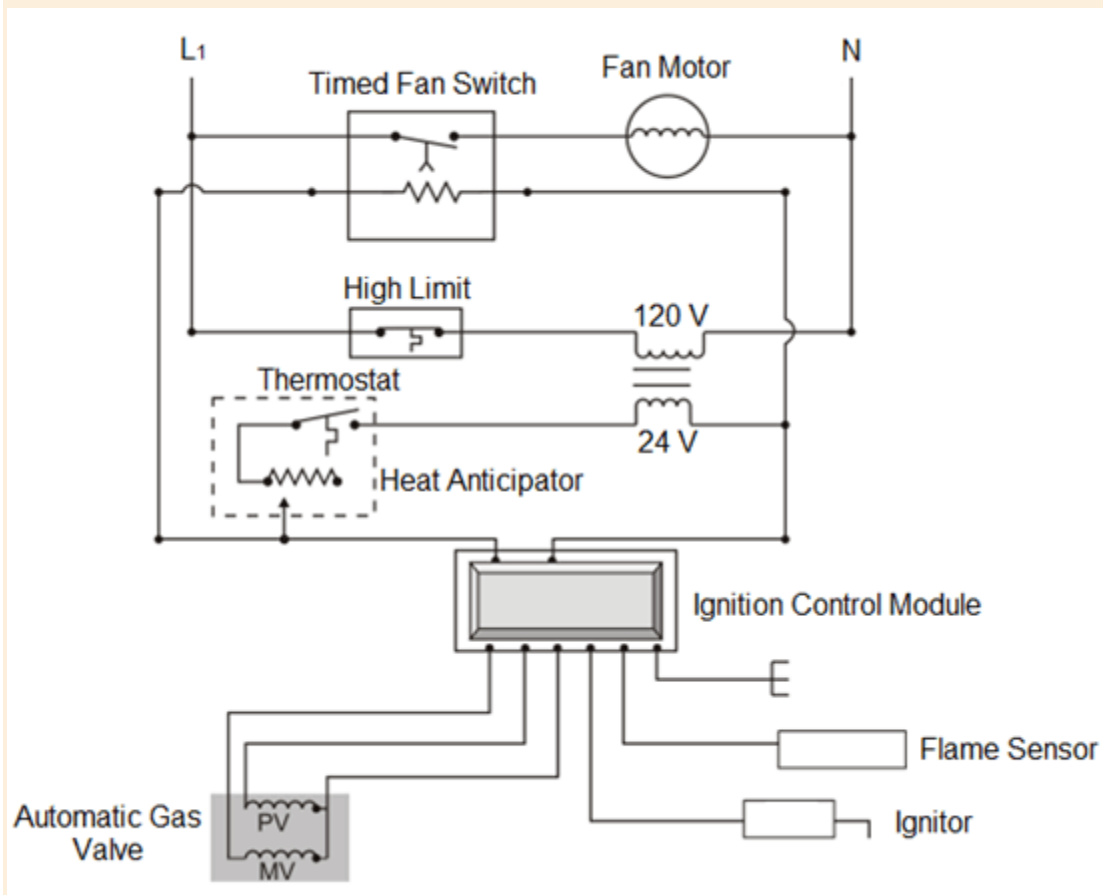

The  is the limit control.

### Feedback

Your answer is incorrect.

The correct answer is:

Referring to the diagram below, identify the operating control and the limit control.

The [Thermostat] is the operating control.

The [High Limit] is the limit control.

### Question 18

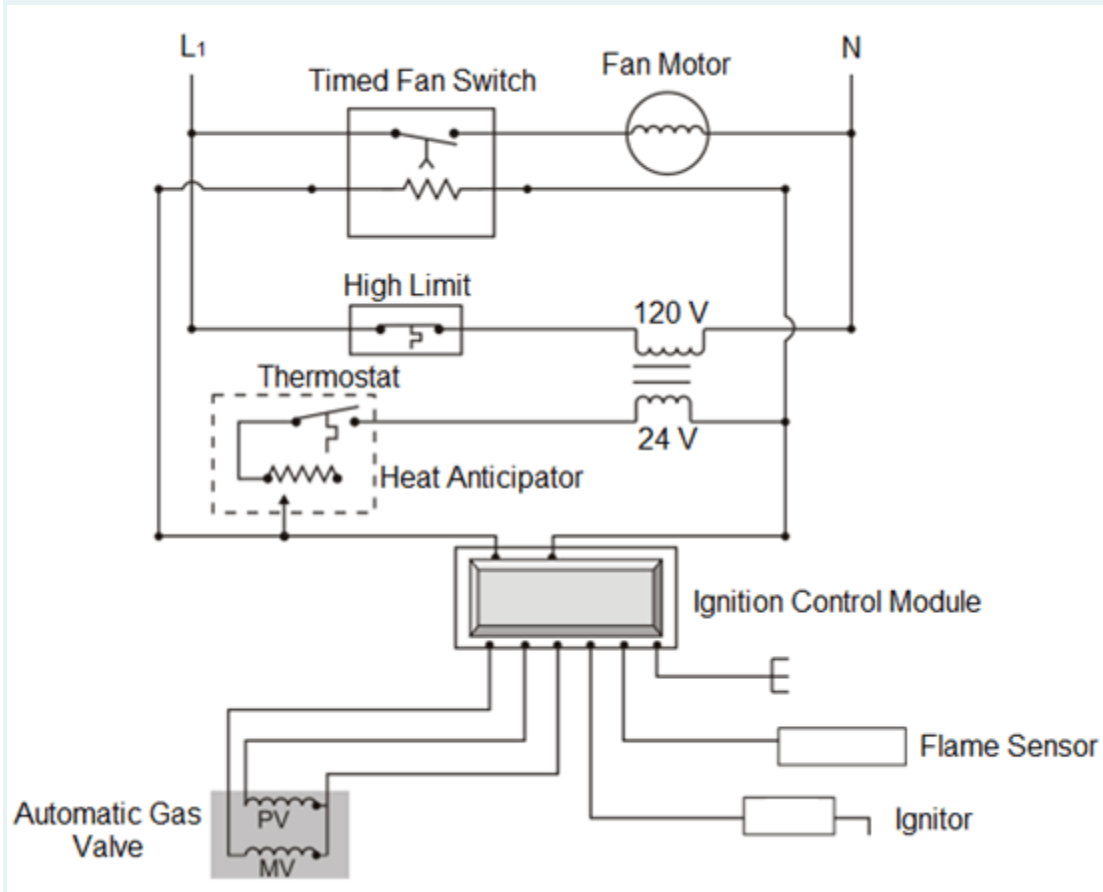

Partially correct

Mark 0.17 out of 1.00

Flag question

### Question text

List the sequence of operation for the diagram below:

1.

24 V travels through the heat anticipator and powers the ignition control module and the fan switch time delay relay coil.

2.

The thermostat calls for heat

3.

The flame sensor detects the pilot flame

4.

The main valve is energized and the main burner is ignited by the pilot flame

5.

The ignition control module powers the igniter and pilot valve

6.

When the time delay relay completes its cycle the fan motor is energized

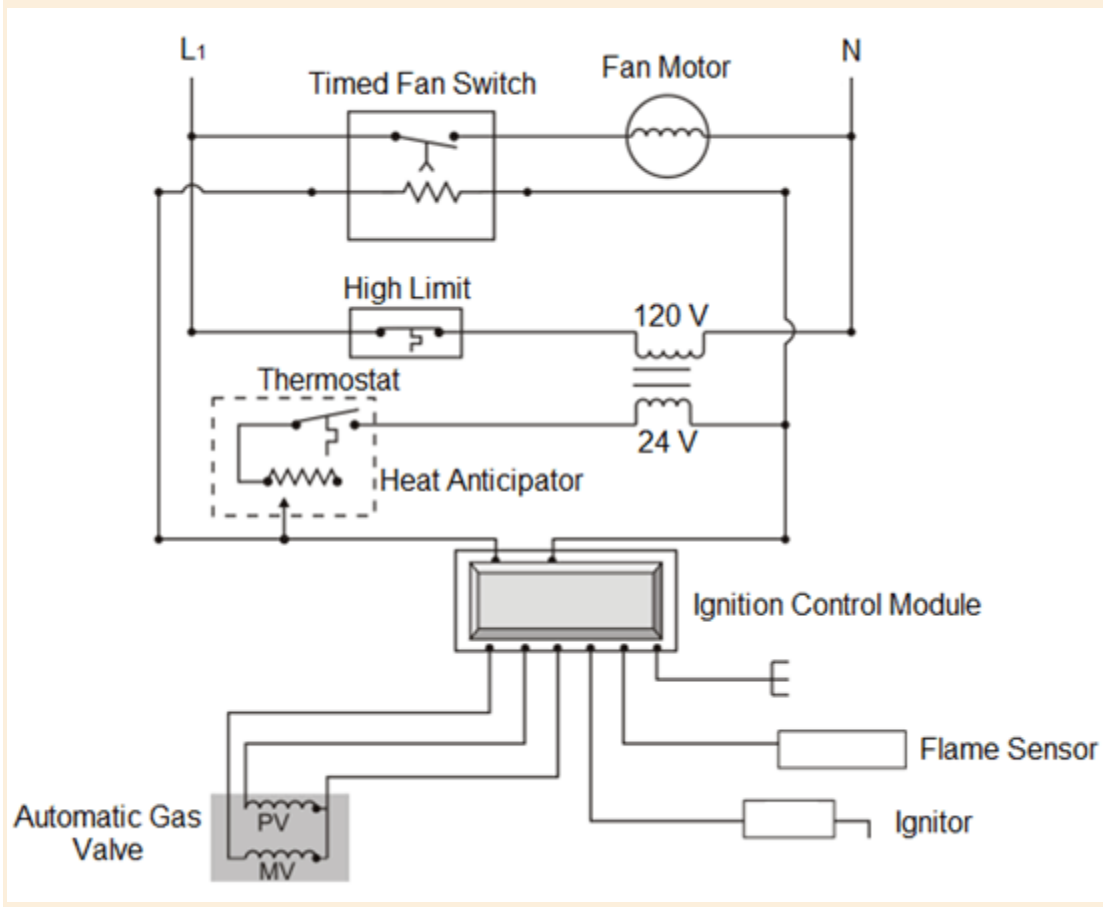

### Feedback

Your answer is partially correct.

You have correctly selected 1.

The correct answer is:

List the sequence of operation for the diagram below:

1. [The thermostat calls for heat]
2. [24 V travels through the heat anticipator and powers the ignition control module and the fan switch time delay relay coil.]
3. [The ignition control module powers the igniter and pilot valve]
4. [The flame sensor detects the pilot flame]
5. [The main valve is energized and the main burner is ignited by the pilot flame]
6. [When the time delay relay completes its cycle the fan motor is energized]

Question **19**

Partially correct

Mark 0.60 out of 1.00

[Flag question](#)

**Question text**

List the sequence of operation for the diagram below:

- Provided that the high limit aquastat, low water cut-off and flame rollout are closed, the operating aquastat will close its contacts on a drop in water level allowing current to flow through the pressure switch to relay coil 2CR.

1

- 1CR-1 contacts close energizing the circulator.

3

- 1CR-2 contacts close energizing the control circuit.

5

- 2CR-1 contacts close energizing the inducer fan.

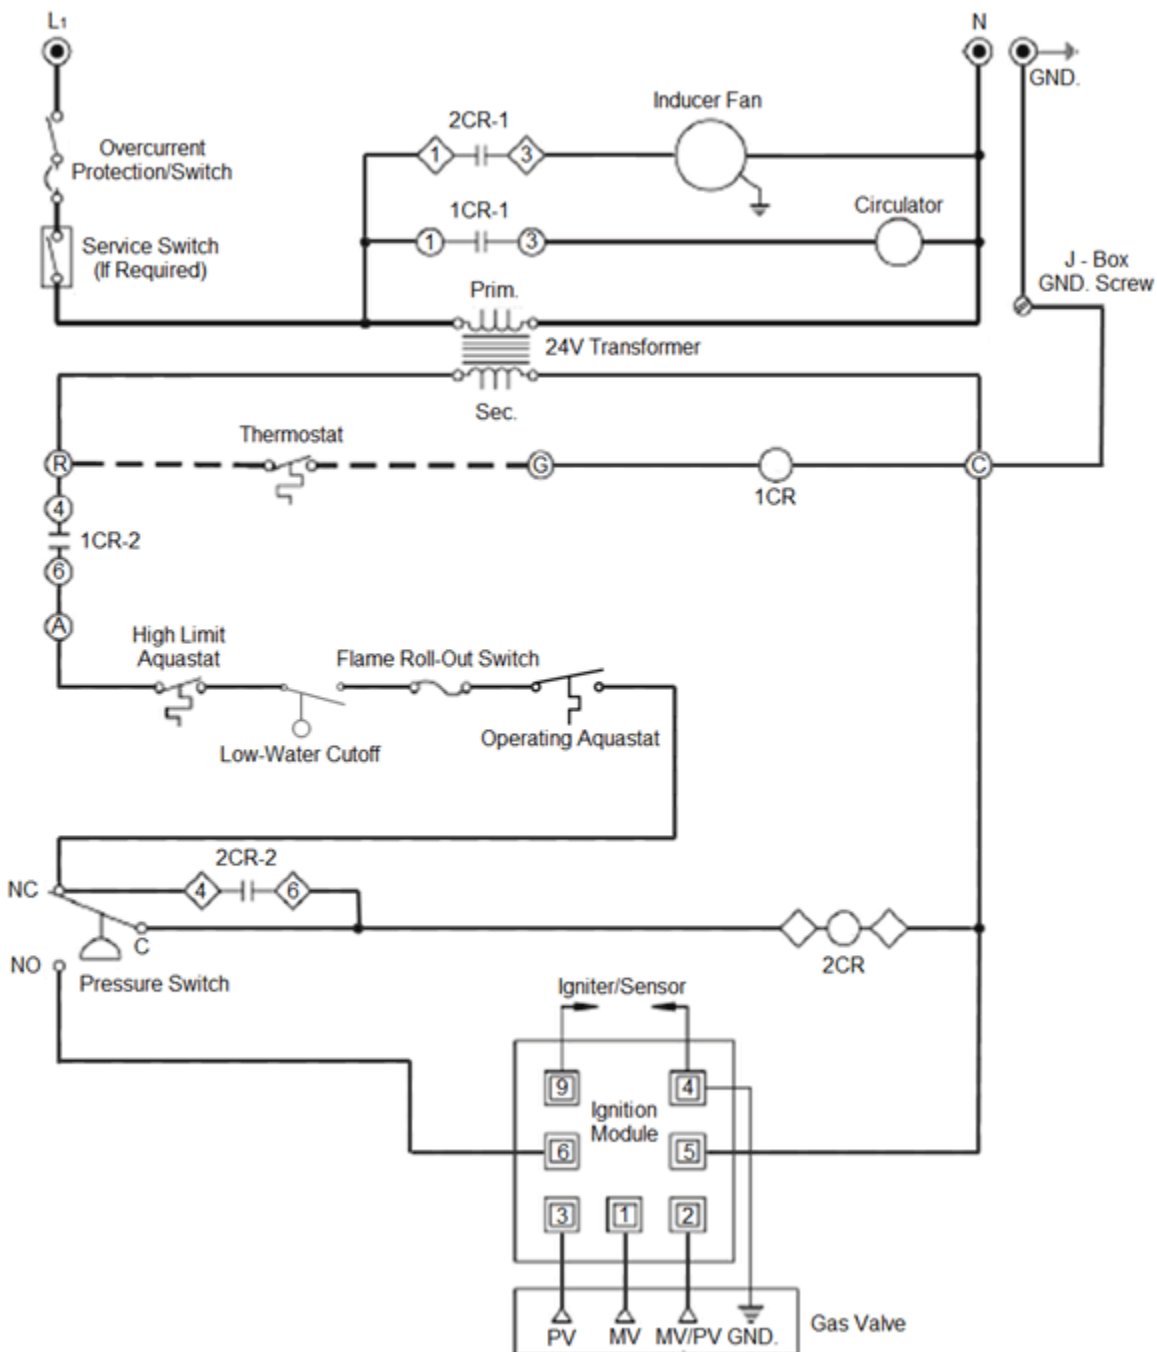

### Feedback

Your answer is partially correct.

You have correctly selected 3.

The correct answer is:

List the sequence of operation for the diagram below:

[1] - When the thermostat closes its contacts, relay coil 1CR is energized

[4] - Provided that the high limit aquastat, low water cut-off and flame rollout switches are closed, the operating aquastat will close its contacts on a drop in water temperature allowing current to flow through the pressure switch to relay coil 2CR.

[2] - 1CR-1 contacts close energizing the circulator.

[3] - 1CR-2 contacts close energizing the control circuit.

[5] - 2CR-1 contacts close energizing the inducer fan.

Question **20**

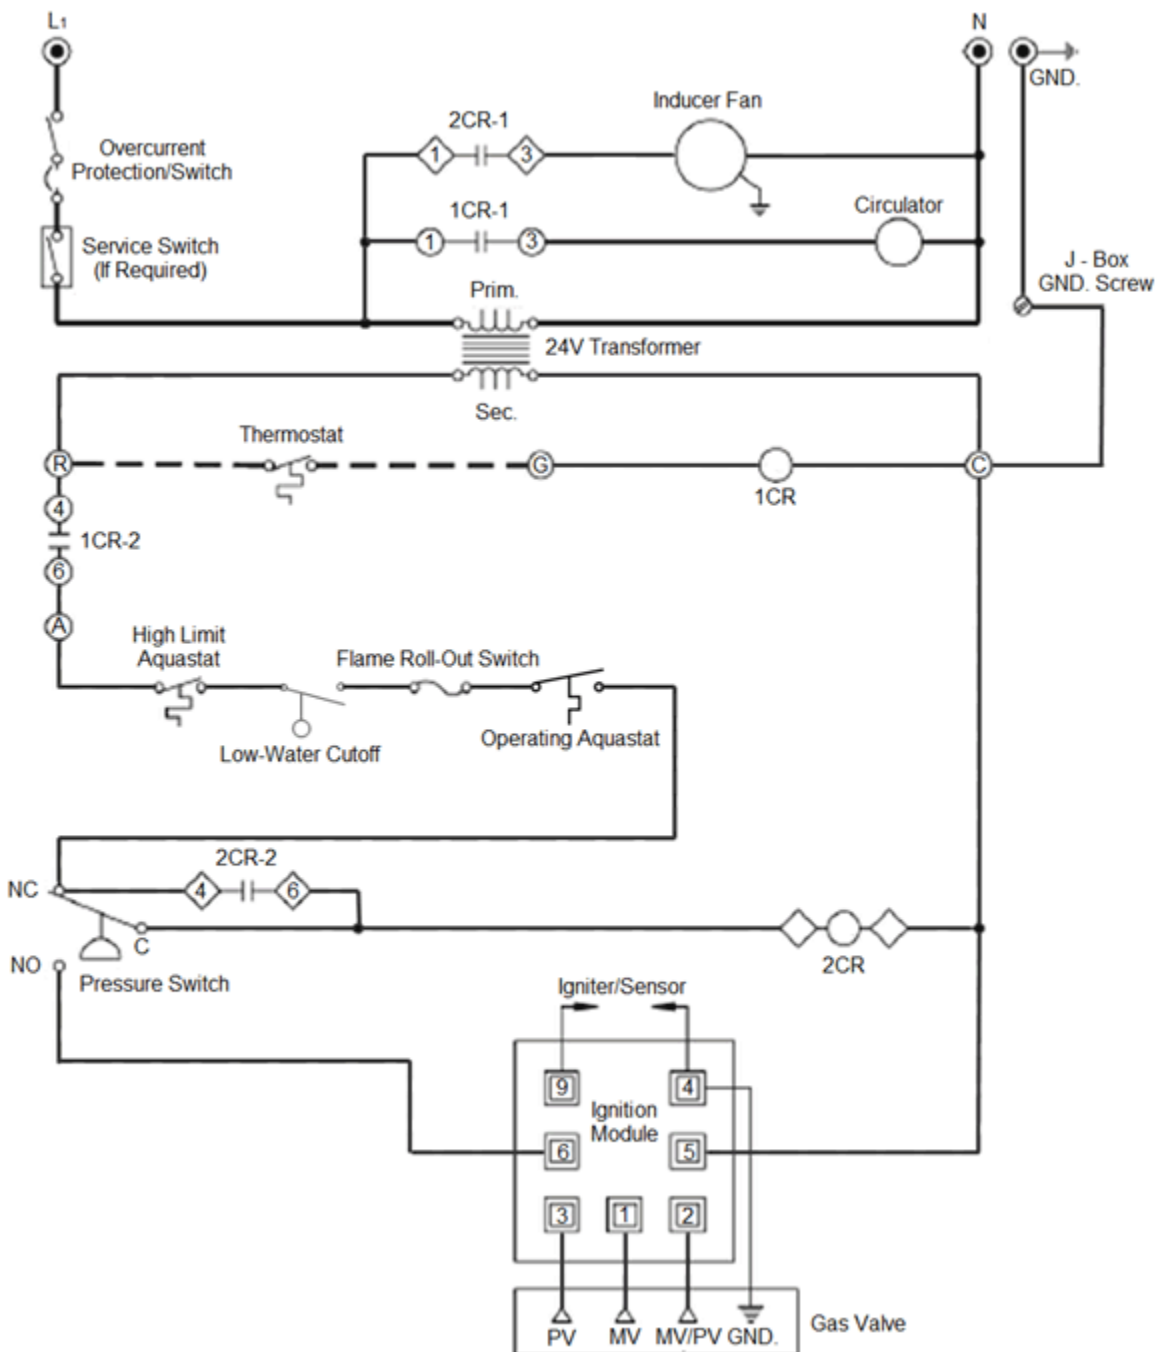

Partially correct

Mark 0.50 out of 1.00

[Flag question](#)

Question text

Referring to the figure, identify the limit controls:

Select one or more:

a.  
Low Water Cut Off

b.  
1CR-1

c.  
Pressure Switch

d.  
2CR-1

e.  
High Limit Aquastat

f.  
Flame Roll Out Switch

g.  
1CR-2

### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answers are: High Limit Aquastat, Low Water Cut Off, Flame Roll Out Switch, Pressure Switch

### Question 21

Correct

Mark 2.00 out of 2.00

Flag question

### Question text

Answer

Direct spark ignition

lights the main burner by use of a spark.

Answer

Intermittent pilot ignition

must first ignite and prove the pilot which in turn lights the main burner, the pilot continues to burn until the main burner is extinguished.

Question **22**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the most common voltage used for “Hot Surface Igniters” ?

Select one:

☐

a.  
Any voltage above 24 volts

☐

b.  
24 volts

☒

c.  
120 volts

☐

d.  
240 volts

Feedback

Your answer is correct.

The correct answer is: 120 volts

Question **23**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Which type of ignition system would the control module illustrated below be used ?

Select one:

a. Standing Pilot

b. Direct Spark Ignition

c. FVR

d. Direct Hot Surface

#### Feedback

Your answer is incorrect.

The correct answer is: Direct Spark Ignition

Question **24**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

How would you reset a control module that has “Locked-Out”?

Select one:

☐

a.  
Push the reset button.

☐

b.  
Switch the appliance over to pilot ignition and run one complete cycle.

☒

c.  
Disconnect the spark igniter and call for heat to reset the module.

☐

d.  
Turn either the appliance disconnect switch off or the thermostat down for 1 – 3 minutes.

### Feedback

Your answer is incorrect.

Turn either the appliance disconnect switch off or the thermostat down for 1 – 3 minutes.

The correct answer is: Turn either the appliance disconnect switch off or the thermostat down for 1 – 3 minutes.

### Question 25

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What are the three major classifications of furnaces?

Select one or more:

☐

a.  
Direct Return

☐

b.  
Strap On

c.  
Horizontal

d.  
Intermittent

e.  
Low Boy

f.  
Blow Back

g.  
High Boy

#### Feedback

Your answer is correct.

The correct answers are: High Boy, Low Boy, Horizontal

#### Question 26

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What are the two classifications of “High Boy” furnaces?

Select one or more:

a.  
Counter-Flow or Downflow

b.  
Upflow

c.  
Forward Flow

d.  
Upright

e.  
Horizontal

#### Feedback

Your answer is correct.

The correct answers are: Upflow, Counter-Flow or Downflow

#### Question 27

Incorrect

Mark 0.00 out of 2.00

Flag question

#### Question text

When determining the temperature rise across the heat exchanger of a furnace. A thermometer should be inserted into the return air plenum within Answer

of the heat exchanger as well as a thermometer inserted into the supply plenum within Answer

of the heat exchanger. The difference of these two readings is the temperature rise.

#### Feedback

Insert a thermometer into the return air plenum (within 6 ft.) and a thermometer into the supply plenum 2 to 3 feet away but not in the radiant view of the heat exchanger. The difference in temperature is the temperature rise.

#### Question 28

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Inserting an incline manometer or digital manometer into the return air plenum and supply plenum would determine which of the following?.

Select one:

a.  
Temperature Rise

b.  
Internal Static pressure

c.  
Flow Rate

d.  
External Static Pressure

### Feedback

Your answer is incorrect.

Insert an incline manometer or digital manometer into the return air plenum and supply plenum. The difference in pressure is the external static pressure (ESP).

The correct answer is: External Static Pressure

### Question 29

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Identify the fan motor illustrated below :

Select one:

☐

a.  
Flux Capacitor Fan Motor

☐

b.  
Injector Fan Motor

☒

c.  
ECM variable speed direct drive fan motor

☐

d.  
Modulating Fan Motor

#### Feedback

Your answer is correct.

The correct answer is: ECM variable speed direct drive fan motor

Question **30**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What could cause a belt drive fan motor blower to be noisy and inefficient?

Select one:

☐

a.  
no lubrication

☒

b.  
tear

☐

c.  
alignment

☐

d.  
material

### Feedback

Your answer is incorrect.

The correct answer is: alignment

### Question 31

Correct

Mark 1.00 out of 1.00

[Flag question](#)

### Question text

What are the two types of direct drive fan motors?

Select one or more:

☐

a.  
Leaver (LFM)

☐

b.  
Eccentric Rotor (ECM)

☒

c.  
Variable Speed (ECM)

☒

d.  
Multi-speed (PSC)

## Feedback

Your answer is correct.

The correct answers are: Multi-speed (PSC), Variable Speed (ECM)

## Question 32

Incorrect

Mark 0.00 out of 1.00

Flag question

## Question text

Referring to the illustration below, which type of direct drive fan motor would be used?

Select one:

a. Oscillating-drive

b. Single-speed

c.  
Any type of fan drive will work

d.  
Multi-speed

#### Feedback

Your answer is incorrect.

The correct answer is: Multi-speed

#### Question 33

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is meant by the term “ECM” motor?

Select one:

a.  
Electronically Controlled Motor

b.  
Electric Combination Motor

c.  
Electronically Cooled Motor

d.  
Electronically Commutated Motor

#### Feedback

Your answer is correct.

The correct answer is: Electronically Commutated Motor

#### Question 34

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

If a furnace has a cooling coil installed that has a rated capacity of 40,000 Btuh, what would be the required air flow in CFM?

Answer:  CFM

#### Feedback

40 000 Btuh / 12 000 = 3.33 tons

3.33 tons x 400CFM/Ton = 1 333.33 CFM

The correct answer is: 1333.33

#### Question 35

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

If a furnace has a rated output of 60,000 Btuh and the rating plate specifies a temperature rise of 40°- 60°F, what would be the required air flow in CFM?

Answer:

#### Feedback

CFM = Btuh (output) / (1.08 x ΔT)

CFM = 60 000Btuh / (1.08 x 50F)

CFM = 1 111.11

The correct answer is: 1111.11

#### Question 36

Partially correct

Mark 3.00 out of 4.00

Flag question

#### Question text

If a furnace has the below values found on its rating plate, what would be the required fan speed for both high fire and low fire?

## Appliance rating plate

Heat Stage	HIGH	LOW
Input / Entree BTU/Hr	123 000	81 000
Output / Sortie BTU/Hr	101 000	66 000
Air Temperature Rise F	45-75	25-55
Air Temperature Rise C	25-42	14-31
External Static Pressure max.	0.5 in wc	

## Fan Selection Table

Air Delivery in Cubic Feet per Minute (CFM)								
Fan Speed	External Static Pressure (in.w.c.)							
	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8
High	2010	1950	1875	1810	1740	1660	1550	1455
Med-High	1675	1660	1625	1600	1545	1490	1395	1295
Med-Low	1445	1430	1415	1400	1370	1325	1265	1170
Low	1260	1260	1260	1250	1210	1180	1115	1030

High Fire CFM = Answer 1558

CFM (calculated)

Low Fire CFM = Answer 1527

CFM (calculated)

High Fire fan selection = Answer Med-Low

Low Fire fan selection = Answer Med-High

#### Feedback

High Fire = 101 000BTUH/ (1.08 x 60F) = 1558.64 CFM

Low Fire = 66 000BTUH/ (1.08 x 40F) = 1527.78 CFM

#### Question 37

Correct

Flag question

#### Question text

A forced air furnace through which the circulating air flows in the opposite direction to the flue gas is a/an :

Select one:

a.  
counter flow furnace

b.  
horizontal furnace

c.  
low boy furnace

d.  
up-flow furnace

#### Feedback

Your answer is correct.

The correct answer is: counter flow furnace

#### Question 38

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The basic job of an operating control on a boiler is to :

Select one:

☐

a.  
start the pump when the boiler water gets too cold

☐

b.  
energize the burner when the boiler water level gets too low

☐

c.  
energize the burner when the boiler water gets too hot

☒

d.  
energize the burner when the boiler water gets too cold

### Feedback

Your answer is correct.

The correct answer is: energize the burner when the boiler water gets too cold

### Question 39

Incorrect

Mark 0.00 out of 1.00

### Question text

The fan control on a forced air furnace generally operates on :

Select one:

☒

a.  
24 V

☐

b.  
120 V

☐

c.  
30 mV

☐

d.  
750 mV

### Feedback

Your answer is incorrect.

The correct answer is: 120 V

Question **40**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

If the voltage produced by a thermocouple is less than 7 millivolts and the magnet will not hold in :

Select one:

☐

a.  
increase the high limit setting

☐

b.  
change the magnet

☒

c.  
change the thermocouple

☐

d.  
reduce the input to the pilot

### Feedback

Your answer is correct.

The correct answer is: change the thermocouple

Question **41**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What supplies power to the safety shut-off valve for an appliance that has a 24V control system and a standing pilot?

Select one:

☐

a.  
Thermopile

☒

b.  
Transformer

☐

c.  
Thermocouple

☐

d.  
Photocell

#### Feedback

Your answer is incorrect.

The correct answer is: Thermocouple

Question **42**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the primary purpose of a thermocouple ?

Select one:

☒

a.  
To prove that the pilot is lit

☐

b.  
To energize the gas valve

☐

c.  
To give 100% safety

☐

d.  
To supply power to the thermostat

#### Feedback

Your answer is correct.

The correct answer is: To prove that the pilot is lit

Question **43**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

In the illustration shown below, what does Item “A” indicate ?

Select one:

a.  
Limit control

b.  
Gas valve

c.  
Power supply

d.  
Ignition module

Feedback

Your answer is incorrect.

The correct answer is: Gas valve

Question 44

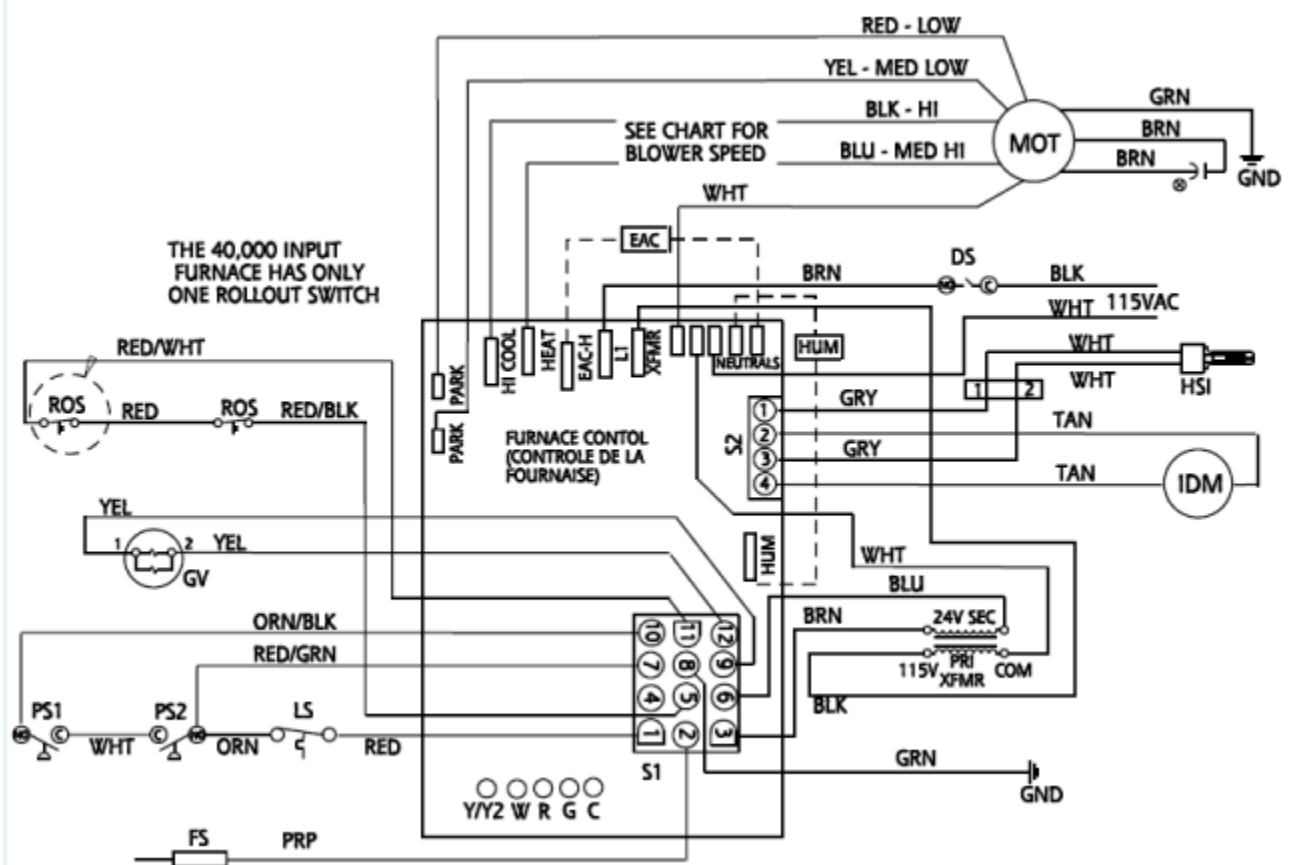

Incorrect

Mark 0.00 out of 1.00

#### Question text

Which fan speed is connected to the heating terminal ?

Select one:

a.  
Med High

b.  
Med Low

c.  
High

d.  
Low

#### Feedback

Your answer is correct.

The correct answer is: Med High

Question **46**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Which device is connected to the terminal “XFMR”?

Select one:

☐

a.  
Flame Rod

☒

b.  
Transformer

☐

c.  
Inducer Motor

☐

d.  
Blower Motor

#### Feedback

Your answer is correct.

The correct answer is: Transformer

#### Question 47

Correct

Question text

How many pressure switches are required?

Select one:

☐

a.

2

☐

b.

1

☒

c.

3

☐

d.

4

Feedback

Your answer is incorrect.

The correct answer is: 2

Question **49**

Partially correct

Mark 0.50 out of 1.00

Flag question

Question text

According to the illustration which fan speeds are not being used ?

Select one or more:

☐

a.

Med High

b.  
Med Low

c.  
Low

d.  
Med

#### Feedback

Your answer is partially correct.

You have correctly selected 1.

The correct answers are: Low, Med Low

#### Question 50

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Which terminals are the transformer secondary connected to?

Select one:

a.  
9 and 12

b.  
5 and 11

c.  
3 and 6

d.  
2 and 4

#### Feedback

Your answer is correct.

The correct answer is: 3 and 6

#### Question 51

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Using the illustration shown below, select the proper wiring to connect the fan motor and thermostat to the appropriate terminals on the circuit board. The fan motor is to run at high speed for cooling, Med High for heating and low speed for continuous operation:

Select one:

a.

b.

C.

Feedback

Your answer is correct.

The correct answer is:

The image shows a fan speed control PCB with various components. The wiring connections are as follows:

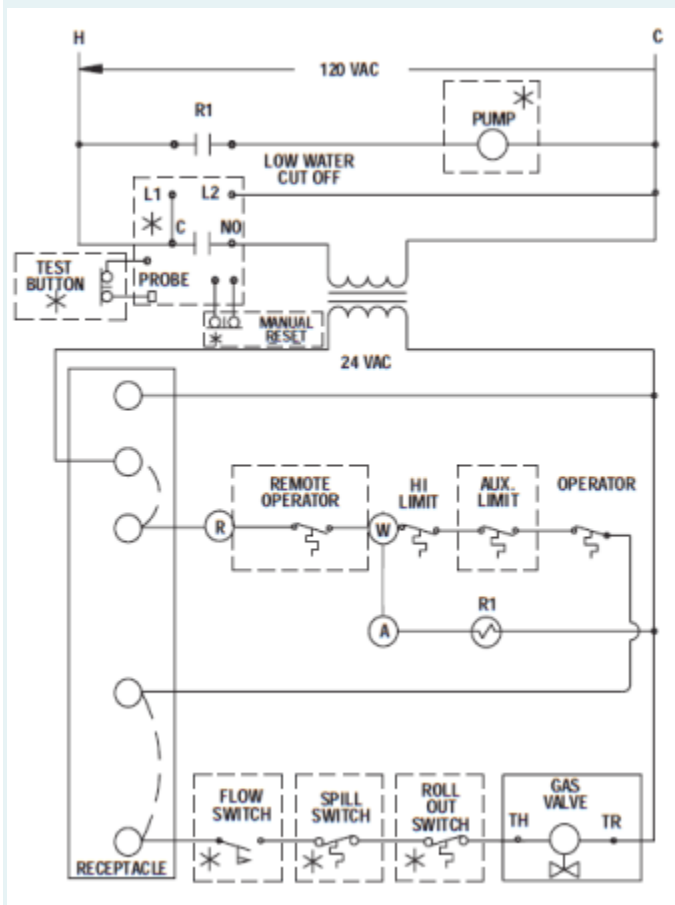

- Ground:** Connected to the black wire of the fan motor.
- High:** Connected to the red wire of the fan motor.
- Neutral:** Connected to the grey wire of the fan motor.
- Low:** Connected to the blue wire of the fan motor.
- Med Low:** Connected to the yellow wire of the fan motor.

The PCB also features a terminal block labeled P1, a connector labeled P3, and various components including resistors, capacitors, and integrated circuits. The fan motor is labeled "Fan Motor" and has a label with "12V 0.1A" and "5000 RPM".

Correct  
Mark 1.00 out of 1.00

Question text

Referring to the following illustration, on a call for heat the remote operator (thermostat) contacts close. What would be the next step in the sequence of operation?

Select one:

a. R1 is energized which opens the gas valve

b. The Aux. Limit opens its contacts which energizes the pump

c. The flow switch closes its contacts and energizes the gas valve

d. Relay Coil R1 is energized, closing its contacts which energizes the pump

### Feedback

Your answer is correct.

The correct answer is: Relay Coil R1 is energized, closing its contacts which energizes the pump

The operation and input of manual and automatic commands to run and monitor motors and devices can be done with\_\_\_\_\_?

Select one:

a.

Infrared communication

b.

Magic

c.

Network protocols

d.

USB

### Feedback

Your answer is incorrect.

The correct answer is: Network protocols

### Question 2

Correct

Mark 1.0 out of 1.0

Question text

Use the following image to answer the question.

In the pump sequencing mode, the terminals 23 -25 are used for the supply power for which pump?

Select one:

☐

a.

The backup/standby system pump

☐

b.

The controller

☒

c.

The main system pump

☐

d.

The auxiliary thermistor

**Feedback**

Your answer is incorrect.

The correct answer is: The backup/standby system pump

The installation of an insulated #12 AWG copper neutral conductor shall comply with which of the following requirement ?

Select one:

☐

a.

All the options requirement apply to the installation of a neutral condutor

☐

b.

It shall be installed in all separately enclosed switches

☐

c.

It may be identified by a white covering

☒

d.

It may be identified by a natural grey covering

#### Feedback

Your answer is incorrect.

The correct answer is: All the options requirement apply to the installation of a neutral condutor

Flag question

Question text

Bonding means joining non-current carrying metal parts together to assure electrical continuity.

Select one:

- ☒ True  
☐ False

Feedback

The correct answer is 'True'.

Question 7

Correct

Mark 1.00 out of 1.00

Flag question

Question text

No one shall repair or alter live equipment , unless disconnection is not practicable.

Select one:

- ☒ True  
☐ False

Feedback

The correct answer is 'True'.

Question 8

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The full load current rating (FLA) of a single phase 115V 3 HP AC motor is :

Select one:

- ☐

- a.  
17 amps  
☒
- b.  
34 amps  
☐
- c.  
24 amps  
☐
- d.  
304 amps  
☐

#### Feedback

Your answer is correct.

The correct answer is: 34 amps

#### Question 9

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

When must you apply for an electrical permit ?

Select one:

- ☒
- a.  
Before any electrical work starts  
☐
- b.  
Immediately before the first electrical inspection  
☐
- c.  
Before any of the wire is covered or concealed  
☐
- d.  
Immediately before connection to the utility power supply  
☐

#### Feedback

Your answer is correct.

The correct answer is: Before any electrical work starts

Question **10**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the maximum circuit voltage-to-ground in a dwelling unit (single family) ?

Select one:

☐

a.  
240 V

☐

b.  
300 V

☐

c.  
30 V

☒

d.  
150 V

Feedback

Your answer is correct.

The correct answer is: 150 V

Question **11**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Which group provides certification for gas furnaces ?

Select one:

☒

a.

A.G.A

b.

U.L

c.

C.G.A

d.

N.F.P.A

#### Feedback

Your answer is incorrect.

The correct answer is: U.L

#### Question 12

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Which of the following is not permitted as a disconnecting means ?

Select one:

a.

Switching breaker

b.

Disconnect switch

c.

Single pole switch

d.

Three way switch

#### Feedback

Your answer is incorrect.

The correct answer is: Three way switch

Question **13**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the minimum clearance between a receptacle and a gas meter installed within a building ?

Select one:

☐

a.  
300 mm

☐

b.  
10 m

☐

c.  
1000 mm

☒

d.  
1.5 m

Feedback

Your answer is incorrect.

The correct answer is: 1000 mm

Question **14**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What does the code letters TE refer to as when found marked on motors for use in non-hazardous locations ?

Select one:

☐

a.

Torque engineerd

b.

Tungsten enamelled

c.

Tasmanian electric

d.

Totally enclosed

### Feedback

Your answer is correct.

The correct answer is: Totally enclosed

### Question 15

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What gauge 2 wire copper cable has an allowable ampacity of 15 amps ?

Select one:

a.

No 10

b.

No 16

c.

No 14

d.

No 12

### Feedback

Your answer is correct.

The correct answer is: No 14

Question **16**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Which table shows the maximum current that can flow through a 2 or 3 conductor aluminum cable ?

Select one:

☐

a.

Table 3

☒

b.

Table 4

☐

c.

Table 2

☐

d.

Table 1

Feedback

Your answer is correct.

The correct answer is: Table 4

Question **17**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the ampacity of No.12 AWG NMD 90 copper conductor ?

Select one:

☐

a.

20 amps

b.  
40 amps

c.  
15 amps

d.  
30 amps

#### Feedback

Your answer is incorrect.

The correct answer is: 30 amps

#### Question 18

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

#### Question text

What is the ampacity of a Type SO flexible cord with 2 No 14 AWG conductors ?

Select one:

a.  
15 amps

b.  
20 amps

c.  
10 amps

d.  
18 amps

#### Feedback

Your answer is incorrect.

The correct answer is: 18 amps

#### Question 19

Correct  
Mark 1.00 out of 1.00

Flag question

Question text

What color must be used for a neutral conductor ?

Select one:

☐

a.  
Green

☒

b.  
White

☐

c.  
Red

☐

d.  
Black

Feedback

Your answer is correct.

The correct answer is: White

Question **20**

Correct  
Mark 1.00 out of 1.00

Flag question

Question text

What is the color of an insulated grounding or bonding conductor ?

Select one:

☐

a.  
White

☒

b.  
Green

☐

c.  
Red

☐

d.  
Black

#### Feedback

Your answer is correct.

The correct answer is: Green

#### Question 21

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

What is the maximum ampacity of one No 4 TW75 aluminum conductor in free air ?

Select one:

☒

a.  
100 amps

☐

b.  
125 amps

☐

c.  
85 amps

☐

d.  
65 amps

#### Feedback

Your answer is correct.

The correct answer is: 100 amps

#### Question 22

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What minimum size conductor required to feed a 120V, 10A furnace circuit if the conduit between the panel and the junction box near the furnace carries 7 conductors ?

Select one:

☐

a.  
NMD90 12AWG

☒

b.  
RW60 14AWG

☐

c.  
TW75 12AWG

☐

d.  
1/0

☐

e.  
TW75 14 AWG

Feedback

Your answer is incorrect.

The correct answer is: TW75 14 AWG

Question **23**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Low voltage is considered to be :

Select one:

☐

a.  
0 to 50 volts

b.  
0 to 30 volts

c.  
310 to 1750 volts

d.  
31 to 750 volts

#### Feedback

Your answer is incorrect.

The correct answer is: 31 to 750 volts

#### Question 24

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

The nominal supply voltage of a safety control circuit for gas or oil fuel burning equipment shall not exceed which one of the following voltages ?

Select one:

a.  
24 volts

b.  
40 volts

c.  
240 volts

d.  
120 volts

#### Feedback

Your answer is correct.

The correct answer is: 120 volts

Question **25**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Where armoured cables are bent during installation the radius of the curve of the inner edge of the bends shall be at least \_\_\_\_\_ times the external diameter of the armoured cable ?

Select one:

a.  
6

b.  
3

c.  
2

d.  
5

Feedback

Your answer is correct.

The correct answer is: 6

Question **26**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The nominal voltage encountered in a single family residential dwelling is :

Select one:

a.  
120/208 volts

b.  
120/240 volts

c.  
115/230 volts

d.  
110/220 volts

#### Feedback

Your answer is correct.

The correct answer is: 120/240 volts

#### Question 27

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

A motor disconnecting means for a gas appliance in a single family dwelling shall be within sight of and within a maximum of \_\_\_\_\_ meters of the motor ?

Select one:

a.  
3

b.  
6

c.  
9

d.  
5

#### Feedback

Your answer is correct.

The correct answer is: 9

Question **28**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

A class B gas fitter is not permitted to perform which one of the following types for electrical work ?

Select one:

☐

a.  
Install class 2 low voltage thermostat control wiring

☒

b.  
Remove and replace with new an existing gas appliance where the full load currents of the two units are identical

☐

c.  
Remove and replace with new an identical integral replacement part for the electrical control of a gas appliance

☐

d.  
Install 120 volt wiring from the circuit panelboard to the furnace

Feedback

Your answer is incorrect.

The correct answer is: Install 120 volt wiring from the circuit panelboard to the furnace

Question **29**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

All interior gas piping which may become energized , required a copper bonding conductor that is not smaller than which one of the following wire sizes ?

Select one:

a.  
10

b.  
4

c.  
8

d.  
6

#### Feedback

Your answer is correct.

The correct answer is: 6

#### Question 30

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In order to change the rotation (direction) of a three phase motor you must perform which one of the following procedures ?

Select one:

a.  
Change the supply voltage to 208 V

b.  
Change the connection of any two phase conductors

c.  
Change the supply voltage to 240 V

d.  
Change the neutral with any one phase conductor

#### Feedback

Your answer is correct.

The correct answer is: Change the connection of any two phase conductors

Question **31**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The branch circuit conductors and control equipment of each manually started motor shall be provided with overload protection when the motor is rated above which one of the following horsepower ?

Select one:

☐

a.  
3/4 horsepower

☒

b.  
1 horsepower

☐

c.  
1/6 horsepower

☐

d.  
1/2 horsepower

Feedback

Your answer is correct.

The correct answer is: 1 horsepower

Question **32**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The maximum allowable voltage drop on a feeder or branch circuit is which one of the following percentages ?

Select one:

☐

a.  
6 %

☐

b.  
4 %

☒

c.  
3 %

☐

d.  
5 %

#### Feedback

Your answer is correct.

The correct answer is: 3 %

#### Question 33

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

#### Question text

What is the de-rating factor if there are 5 current carrying power conductors in a raceway ?

Select one:

☐

a.  
60 %

☐

b.  
100 %

☐

c.  
80 %

☒

d.

70 %

### Feedback

Your answer is incorrect.

The correct answer is: 80 %

### Question 34

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the ampacity of three No 8 R90 copper conductors in a raceway if it passes through a room with an ambient temperature of 75 degree C ?

Select one:

☐

a.  
110 amps

☐

b.  
55 amps

☒

c.  
27.5 amps

☐

d.  
17.2 amps

### Feedback

Your answer is correct.

The correct answer is: 27.5 amps

### Question 35

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Does all interior metal gas piping which may become energized , required bonding to a grounding conductor ?

Select one:

☐

a.  
Only if there are di-electric fittings on the gas line

☐

b.  
Only if the gas line is copper tube

☒

c.  
Yes in every case

☐

d.  
Only if there is no copper water service to bond to

#### Feedback

Your answer is correct.

The correct answer is: Yes in every case

#### Question 36

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

For a multi-phase system having one wire common to all phases , the conductor to be grounded shall be :

Select one:

☐

a.  
the grounding conductor

☐

b.  
the ungrounded conductor

☒

c.  
the identified neutral conductor

☐

d.  
the identified conductor

#### Feedback

Your answer is correct.

The correct answer is: the identified neutral conductor

#### Question 37

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

When relocating a furnace it is acceptable to extend the circuit wiring by using

Select one:

☐

a.  
An approved extension cord

☐

b.  
Approved wire connector without a junction box

☐

c.  
Approved wire connectors inside a junction box

☒

d.  
Any flexible cord that meets the ampacity rating

#### Feedback

Your answer is incorrect.

The correct answer is: Approved wire connectors inside a junction box

#### Question 38

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

In using non-metallic sheathed cable it shall be secured by straps or other approved devices within \_\_\_\_\_ mm of every box.

Select one:

☐

a.  
150 mm

☒

b.  
300 mm

☐

c.  
250 mm

☐

d.  
600 mm

#### Feedback

Your answer is correct.

The correct answer is: 300 mm

#### Question 39

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Where conductors issue from armoured cable they shall be protected from abrasion by acceptable :

Select one:

☒

a.  
Bushings

☐

b.  
Locking nuts

☐

c.  
Electrical tape

☐

d.  
Wire nut connectors

#### Feedback

Your answer is correct.

The correct answer is: Bushings

#### Question 40

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is the minimum distance NMSC must be kept from heating ducts ?

Select one:

a.  
25 mm

b.  
50 mm

c.  
150 mm

d.  
13 mm

#### Feedback

Your answer is incorrect.

The correct answer is: 25 mm

#### Question 41

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the minimum distance between the edge of a wooden member and a NMD90 cable running through it ?

Select one:

☐

a.  
13 mm

☐

b.  
50 mm

☐

c.  
25 mm

☒

d.  
32 mm

#### Feedback

Your answer is correct.

The correct answer is: 32 mm

#### Question 42

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

When installing NMD90 on a wall what is the closest distance it can come to the floor level without protection ?

Select one:

☐

a.  
1 m

☐

b.  
2 m

☐

c.  
2.2 m

☒

d.  
1.5 m

#### Feedback

Your answer is correct.

The correct answer is: 1.5 m

#### Question 43

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

#### Question text

A class 2 circuit shall have its output limited to :

Select one:

a.  
24 V amperes

b.  
100 V amperes

c.  
50 V amperes

d.  
1000 V amperes

#### Feedback

Your answer is incorrect.

The correct answer is: 100 V amperes

#### Question 44

Incorrect

Mark 0.00 out of 1.00

[Flag question](#)

#### Question text

A 30 amp over-current device protecting a circuit will require which one of the following sizes of copper bonding conductor ?

Select one:

☐

a.  
16 AWG

☐

b.  
12 AWG

☐

c.  
10 AWG

☒

d.  
14 AWG

#### Feedback

Your answer is incorrect.

The correct answer is: 12 AWG

#### Question 45

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

The maximum output rating for a class 2 transformer is which one of the following VA ?

Select one:

☒

a.  
100 VA

☐

b.  
24 VA

☐

c.  
40 VA

☐

d.

1000 VA

### Feedback

Your answer is correct.

The correct answer is: 100 VA

### Question 46

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which one of the following types of materials shall not be used as an anchoring insert for securing electrical equipment to masonry or concrete ?

Select one:

a.

Wood

b.

Lead

c.

Lead alloy

d.

Plastic

### Feedback

Your answer is correct.

The correct answer is: Wood

### Question 47

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The installation of an electrical circuit for a forced air furnace in a single family dwelling shall comply with which of the following requirements ?

Select one:

a.

It shall be provided with a suitable disconnecting means

b.

It shall be obtained from a single branch circuit

c.

It shall comply with all of the requirements

d.

It shall have a calculated load which shall not exceed the ampere rating of the circuit

#### Feedback

Your answer is correct.

The correct answer is: It shall comply with all of the requirements

#### Question 48

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Where nonmetallic sheathed cable is run in proximity to heating ducts, the transfer of heat to the cable shall be minimized by means of an air space of at least which one of the following distances ?

Select one:

a.

75 mm

b.

50 mm

c.

25 mm

d.  
60 mm

#### Feedback

Your answer is correct.

The correct answer is: 25 mm

#### Question 49

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

All electric power for a heating unit and associated equipment shall be obtained from :

Select one:

a.  
A single branch circuit supplying only extra lights and plugs in the furnace room

b.  
there are no restrictions as long as the conductor is Type LVT

c.  
A single branch circuit for that purpose only

d.  
A three wire conductor one for the furnace and the other for lights and plugs

#### Feedback

Your answer is incorrect.

The correct answer is: A single branch circuit for that purpose only

#### Question 50

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The maximum supply voltage of a safety control circuit for a gas appliance shall not exceed

Select one:

☐

a.  
24 volts

☐

b.  
240 volts

☒

c.  
120 volts

☐

d.  
300 volts

Feedback

Your answer is correct.

The correct answer is: 120 volts

Question **51**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Overload protection for automatically started motors is not required when the motor is \_\_\_\_\_ or less and part of an assembly equipped with other safety controls that protect the motor from damage due to stalled rotor current.

Select one:

☐

a.  
1/4 HP

☐

b.  
1/2 HP

☐

c.  
3/4 HP

d.  
1 HP

#### Feedback

Your answer is correct.

The correct answer is: 1 HP

#### Question 52

Incorrect

Mark 0.00 out of 1.00

#### Question text

A motor disconnect should be installed within what distance from a furnace ?

Select one:

a.  
9 meters

b.  
3 meters

c.  
5 meters

d.  
1 meters

#### Feedback

Your answer is incorrect.

The correct answer is: 9 meters

#### Question 53

Correct

Mark 1.00 out of 1.00

[Flag question](#)

Question text

How would you change the rotation of a three-phase motor ?

Select one:

☐

a.  
Change leg A with C

☐

b.  
Change leg B with C

☒

c.  
All the options are correct

☐

d.  
Change leg A with B

Feedback

Your answer is correct.

The correct answer is: All the options are correct

Question **54**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What is the nominal voltage found in a single family dwelling ?

Select one:

☐

a.  
110/220 volts

☐

b.  
150/300 volts

☒

c.  
120/240 volts

☐

d.

115/230 volts

### Feedback

Your answer is correct.

The correct answer is: 120/240 volts

### Question 55

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the maximum voltage drop in a branch circuit supplying a furnace ?

Select one:

a.

None of the option is correct

b.

3 %

c.

5 %

d.

4 %

### Feedback

Your answer is correct.

The correct answer is: 3 %

### Question 56

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the minimum copper wire size and type to supply a 120 volts 1/2 HP single phase motor in a 25 degree C ambient temperature ?

Select one:

a.  
No 14 TW 75

b.  
No 12 RW 75

c.  
No 14 TW

d.  
No 12 NMD90

#### Feedback

Your answer is correct.

The correct answer is: No 14 TW 75

#### Question 57

Correct

Mark 1.00 out of 1.00

[Flag question](#)

#### Question text

What is the circuit breaker amperage for a 120 V 1/2 HP single phase motor in a 25 degree C ambient temperature ?

Select one:

a.  
20 amps

b.  
30 amps

c.  
25 amps

d.  
15 amps

#### Feedback

Your answer is correct.

The correct answer is: 20 amps

#### Question 58

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

When an armour cable's conductors are exposed at the end of the cable for splicing they shall be protected from the sharp metal edges by which one of the following items ?

Select one:

a.  
A clamp

b.  
A dielectric fitting

c.  
A connector

d.  
An insulated bushing

#### Feedback

Your answer is incorrect.

The correct answer is: An insulated bushing

[Finish review](#)

[◀ Conductors and OPD Sizing](#)

Which method or source of energy may be used to generate electricity?

Select one:

☐

a.  
Heat

☐

b.  
Chemical reaction

☒

c.  
All are correct

☐

d.  
Friction

#### Feedback

Your answer is correct.

The correct answer is: All are correct

#### Question 2

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Static electricity Answer

normally a concern during humid weather.

#### Feedback

During humid weather the electrons can flow through the damp air and the objects will become electrically neutral.

#### Question 3

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What is the name of the effect that refers to heat being applied to two dissimilar metals or alloys that are joined together that results in current flow?

Select one:

☐

a.  
Thermoelectric effect

☐

b.  
Bimetal effect

☒

c.  
Dissimilar effect

☐

d.  
Setback effect

### Feedback

Your answer is incorrect.

The correct answer is: Thermoelectric effect

### Question 4

Partially correct

Mark 0.50 out of 1.00

Flag question

### Question text

What are the two practical applications for thermocouples? Select all that apply.

Select one or more:

☒

a.  
To act as a temperature sensor

☐

b.  
To provide light for maintenance purposes

☒

c.  
To ignite pilot gas with hot surface

☐

d.  
To generate extra low voltage

#### Feedback

Your answer is partially correct.

You have correctly selected 1.

The correct answers are: To generate extra low voltage, To act as a temperature sensor

#### Question 5

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What action occurs when a battery produces electricity?

Select one:

☐

a.  
Triboelectric effect

☐

b.  
Piezoelectricity

☒

c.  
Electrochemistry

☐

d.  
Thermoelectric effect

#### Feedback

Your answer is correct.

Electrochemistry is produced when a liquid electrolyte is mixed with other materials to form a paste which allows communication between the anode and the cathode. The cell can then be used in any position and handled as though it was actually dry. Therefore a battery is sometime referred to as a dry cell.

The correct answer is: Electrochemistry

Flag question

#### Question text

What type of appliance is likely to have a piezoelectric igniter? Select all that apply.

Select one or more:

☐

a.

Barbeque

☒

b.

Hot water tank

☒

c.

Patio heater

☐

d.

Fireplace

#### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answers are: Hot water tank, Patio heater, Fireplace, Barbeque

#### Question 7

Partially correct

Mark 0.33 out of 1.00

Flag question

### Question text

What are the three common types of materials used to make magnets? Select all that apply.

Select one or more:

☐

a.  
Silver

☒

b.  
Aluminum

☒

c.  
Copper

☐

d.  
Cobalt

☒

e.  
Nickel

☐

f.  
Iron

### Feedback

Your answer is partially correct.

You have correctly selected 1.

The two types of magnets are, Permanent Magnets and Electromagnets.

The correct answers are: Cobalt, Iron, Nickel

### Question 8

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

If the current is increased through a conductor, what effect would this have on the strength of the magnetic field surrounding the conductor?

Select one:

☒

a.  
It will increase

☐

b.  
It will decrease

☐

c.  
It will stay the same

☐

d.  
It will fluctuate

### Feedback

Your answer is correct.

The correct answer is: It will increase

### Question 9

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What method of producing voltage was discovered by Faraday that linked electricity and magnetism?

Select one:

☐

a.

Galvanic series

b.

Electromagnetic induction

c.

Three phase power

d.

Periodic table

#### Feedback

Your answer is correct.

The correct answer is: Electromagnetic induction

#### Question 10

Partially correct

Mark 0.67 out of 1.00

Flag question

#### Question text

Identify advantages that alternating current has over direct current. Select all that apply.

Select one or more:

a.

AC converts easily to DC

b.

Generators naturally make AC power

c.

Batteries naturally make AC power

d.

AC power is constant in its polarity

e.  
AC voltage can be changed with a transformer

#### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answers are: AC voltage can be changed with a transformer, Generators naturally make AC power, AC converts easily to DC

#### Question 11

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What are the two standard methods of connecting the single-phase winding of generators to form three-phase circuits?

Select one:

☐

a.  
Alternating and direct

☒

b.  
Series and parallel

☐

c.  
Wye and Delta

☐

d.  
Looped and gridded

#### Feedback

Your answer is incorrect.

The correct answer is: Wye and Delta

#### Question 12

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Which part of the light spectrum are CdS photo conductive cells most sensitive?

Select one:

☐

a.  
Infra red

☒

b.  
Ultra violet

☐

c.  
Plasma

☐

d.  
Visible light

### Feedback

Your answer is incorrect.

The correct answer is: Visible light

### Question 13

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What is done to produce a semi conductor with an unbalanced electrical charge for use in a Photovoltaic cell?

Select one:

☒

a.  
Connect to a light dependent resistor

☐

b.  
Coated with oxidized silver

☐

c.  
Doped or chemically modified

☐

d.  
Enclosed in a photo tube

#### Feedback

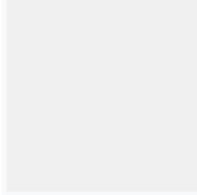

Your answer is incorrect.

The correct answer is: Doped or chemically modified

#### Question 14

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

When referring to the transfer of electricity due to friction; what is the ranking system called that list the order in which materials gain or lose electrons?

Select one:

☐

a.  
Galvanic series

☒

b.  
Triboelectric series

☐

c.  
Thermoelectric effect

☐

d.  
Electrochemistry effect

### Feedback

Your answer is correct.

The correct answer is: Triboelectric series

### Question 15

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Which device in a combustion safety circuit makes use of the "Thermoelectric effect"?

Select one:

a.

Flame rollout switch

b.

High limit

c.

Transformer

d.

Thermocouple

### Feedback

Your answer is incorrect.

The correct answer is: Thermocouple

### Question 16

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What is the maximum voltage produced by a thermopile?

Select one:

☐

a.  
20 mV

☐

b.  
250 mV

☒

c.  
30 mV

☐

d.  
750 mV

#### Feedback

Your answer is incorrect.

The correct answer is: 750 mV

#### Question 17

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is considered the positive terminal in a dry (voltaic) cell?

Select one:

☐

a.  
Porous paper

☒

b.  
Carbon rod

☐

c.  
Zinc container

☐

d.

Electrolyte paste

Feedback

Your answer is correct.

The correct answer is: Carbon rod

Question **18**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What type of electricity is produced when pressure is applied to certain crystalline materials such as quartz?

Select one:

☐

a.  
Electrochemistry

☐

b.  
Thermoelectricity

☐

c.  
Photoelectricity

☒

d.  
Piezoelectricity

Feedback

Your answer is correct.

The correct answer is: Piezoelectricity

Question **19**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which pole of a magnet do the lines of force enter?

Select one:

☐

a.  
West

☐

b.  
North

☒

c.  
South

☐

d.  
East

### Feedback

Your answer is correct.

The correct answer is: South

### Question 20

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What determines the strength of the magnetic field surrounding a conductor?

Select one:

☐

a.  
Amperage

☐

b.  
Temperature

☐

c.  
Resistance

☒

d.  
Voltage

#### Feedback

Your answer is incorrect.

The correct answer is: Amperage

#### Question **21**

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Which rule is used to identify the direction of the magnetic lines of flux around a wire?

Select one:

☐

a.  
Seebeck Effect

☐

b.  
Bernoulli's Principle

☒

c.  
Left Hand Rule

☐

d.  
Right Hand Rule

#### Feedback

Your answer is correct.

The correct answer is: Left Hand Rule

Question **22**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is required to generate electricity by electromagnetic induction?

Select one:

a.

Friction

b.

Temperature

c.

Pressure

d.

Motion

Feedback

Your answer is incorrect.

The correct answer is: Motion

Question **23**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Which of the following would not increase the voltage produced by electromagnetic induction ?

Select one:

a.

Increasing the strength of the magnetic field

b.

Increasing the temperature of the magnet and the coil

c.

Increasing the number of turns of wire in the coil

d.

Increasing the speed of the relative motion between the coil and the magnet

#### Feedback

Your answer is incorrect.

The correct answer is: Increasing the temperature of the magnet and the coil

#### Question 24

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

Which device transfers the voltage from the slip rings in a generator to the conductors ?

Select one:

a.

Armature

b.

Stator

c.

Rotor

d.

Brushes

### Feedback

Your answer is correct.

The correct answer is: Brushes

#### Question **25**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the typical cycle frequency for AC electrical power in North America?

Select one:

☐

a.  
30 Hertz

☒

b.  
60 Hertz

☐

c.  
10 Hertz

☐

d.  
120 Hertz

### Feedback

Your answer is correct.

The correct answer is: 60 Hertz

#### Question **26**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

How many degrees apart are the coils in a three phase generator?

Select one:

☐

a.  
30

☐

b.  
45

☐

c.  
90

☒

d.  
120

#### Feedback

Your answer is correct.

The correct answer is: 120

#### Question **27**

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

What is another name for a CdS photoconductive cell?

Select one:

☐

a.  
Light dependent resistor

☒

b.  
Phototube

☐

c.  
Rectifier

☐

d.  
Light emitting diode

#### Feedback

Your answer is incorrect.

The correct answer is: Light dependent resistor

#### Question 28

Incorrect

Mark 0.00 out of 1.00

Flag question

#### Question text

Identify the electrical generating device illustrated below.

Select one:

a.  
Photoemissive cell

b.  
Photoconductive cell

c.  
Thermoelectric cell

d.  
Photovoltaic cell

Feedback

Your answer is incorrect.

The correct answer is: Photovoltaic cell

Why is high voltage more dangerous to human shock than low voltage?

Select one or more:

☐

a.  
Low voltage lasts only a split second

☒

b.  
High voltage cant be grounded

☐

c.  
Low voltage blows breakers

☒

d.  
High voltage over comes resistance

Feedback

Your answer is correct.

The correct answer is: High voltage over comes resistance

Question **2**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Why is water dangerous when working around electrical power?

Select one:

☐

- a.  
Water increases the voltage  
☐
- b.  
Water gives a path for stray current to the ground  
☐
- c.  
Water reacts chemically with some types of conductors  
☒
- d.  
Water decreases the resistance of the body  
☐

#### Feedback

Your answer is correct.

The correct answer is: Water decreases the resistance of the body

#### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

#### Question text

What is the first thing that should be done when an un-conscious shock victim is discovered?

Select one:

- ☐
- a.  
Check for breathing  
☒
- b.  
Determine if the cause of shock is still present  
☐
- c.  
Check for a pulse  
☐
- d.  
Start CPR  
☐

### Feedback

Your answer is correct.

The correct answer is: Determine if the cause of shock is still present

#### Question 4

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

List the factors that effect the severity of electrical shock to a body?

Select one:

☐

a.

Ventricular cavitation occurs within the body

☒

b.

The heart muscles cannot move and severe burns

☐

c.

The body goes into a Cardiopulmonary state

☐

d.

The heart beats at an excessive rate and muscles begin to vibrate

### Feedback

Your answer is correct.

The correct answer is: The heart muscles cannot move and severe burns

#### Question 5

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What is the lowest amperage during electrical shock that will likely result in cardiac arrest?

Select one:

☐

a.  
above 200 amps

☐

b.  
above 200 mA

☐

c.  
above 1 amp

☒

d.  
above 2 amps

#### Feedback

Your answer is incorrect.

The correct answer is: above 200 mA

#### Question 6

Partially correct

Mark 0.67 out of 1.00

Flag question

#### Question text

What are variables that effect the severity of electrical shock on the body? select all that apply.

Select one or more:

☐

a.  
Duration of exposure to the current

☐

b.  
Temperature of the surrounding atmosphere

☒

c.

Path of current through the body

d.

Amount of sweat or moisture on the skin

#### Feedback

Your answer is partially correct.

You have correctly selected 2.

The correct answers are: Path of current through the body, Amount of sweat or moisture on the skin, Duration of exposure to the current

The Gas Fitter's responsibility starts at the:

Select one:

a.

inlet side of the meter

b.

outlet of the meter

c.

inlet side of the service regulator

d.

outlet side of the service regulator

#### Feedback

Your answer is incorrect.

The correct answer is: outlet of the meter

#### Question 2

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which one of the following must sign the notification of installation or alteration, (call for inspection), the:

Select one:

☐

a.

general contractor, or their registered representative

☐

b.

gas contractor

☐

c.

authorized agent for the gas contractor

☒

d.

gas fitter

### Feedback

Your answer is correct.

The correct answer is: gas fitter

### Question 3

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Where gas is leaking from any part of a gas utility supply system containing gas, a gas fitter shall immediately:

Select one:

☐

a.

dial 911 and evacuate all residents in that area

☒

b.

all of the options

☐

c.

extinguish all flames and sources of ignition in the vicinity of the installation

☐

d.

rope off the area and notify the gas company to make the necessary repairs

Feedback

Your answer is correct.

The correct answer is: all of the options

Question 4

Correct

Mark 1.00 out of 1.00

Flag question

Question text

A domestic appliance service license was once classified as what class of license?

Select one:

☐

A

☐

B

☒

C

☐

D

### Feedback

Your answer is correct.

11 Gas & Safety Regulations

The correct answer is: C

### Question 5

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

An applicant for a Class "A" Gas Fitter's license shall have held a Class "B" Gas Fitter's license for a period of:

Select one:

☐

a.

1 year

☒

b.

2 years

☐

c.

6 months

☐

d.

5 years

### Feedback

Your answer is correct.

The correct answer is: 2 years

### Question 6

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The limitation of a **Class "B"** license, for gas pressures in a gas system is:

Select one:

☒

a.

no limitation on gas pressure

☐

b.

60 PSIG (400 kPa)

☐

c.

5 PSIG (35 kPa)

☐

d.

up to and including 2 PSIG (15 kPa)

### Feedback

Your answer is correct.

The correct answer is: no limitation on gas pressure

### Question 7

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A Class "B" Gas Fitter's license shall entitle the holder, while employed by a gas contractor, to install and alter:

Select one:

a.

any gas system

b.

power burner units up to and including 400,000 Btu/h (117 kW)

c.

approved appliances with draft hoods up to and including 750,000 Btu/h (220 kW)

d.

any approved atmospheric appliances with draft hoods, with no limitations on input

### Feedback

Your answer is correct.

The correct answer is: power burner units up to and including 400,000 Btu/h (117 kW)

Question **8**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

At the completion of the installation of a gas system, the gas fitter must leave a gas fitter's tag on the gas pipe at the point of entry into the building. The information included on this tag shall include which of the following items?

Select one:

☐

a.

The gas fitter's name and date

☒

b.

The gas fitter's name, date, certificate of qualification number and type of appliance

☐

c.

The gas fitter's name, date and phone number

☐

d.

The gas fitter's name, date and certificate of qualification number

Feedback

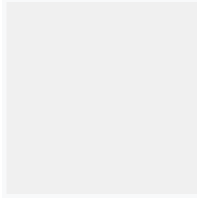

Your answer is correct.

The correct answer is: The gas fitter's name, date, certificate of qualification number and type of appliance

Question **9**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which of the following abbreviations does not represent an agency approved as a gas appliance testing and certification agency for B.C.?

Select one:

☐

a.

ULC

☐

b.

UL

☐

c.

CSA

☒

d.

CGA

### Feedback

Your answer is correct.

The correct answer is: CGA

Question **10**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Before installing an approved used gas appliance, it must be inspected and determined to be safe by:

Select one:

☐

a.

an appliance supplier

☒

b.

a testing agency

☐

c.

a gas fitter

☐

d.

a gas inspector

Feedback

Your answer is incorrect.

The correct answer is: a gas fitter

Question **11**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

To be a gas contractor requires the applicant to:

Select one:

☐

a.

provide proof of a performance bond

☒

b.

have a current business license

☐

c.

employ a Class "A" gas fitter

☐

d.

first be a gas fitter himself/herself

Feedback

Your answer is incorrect.

The correct answer is: provide proof of a performance bond

Question **12**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

A person who connects gas to an appliance shall:

Select one:

☐

a.

verify inputs and make any necessary adjustments

☐

b.

inform user of correct operation

☒

c.

all of the options

☐

d.

ensure appliances work according to manufacturer's specifications

### Feedback

Your answer is correct.

The correct answer is: all of the options

### Question 13

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Who may not apply for a permit to install gas appliances?

Select one:

☐

a.

A homeowner to do his/her own gas fitting in their home

☒

b.

A gas fitter/contractor

☐

c.

A gas fitter

☐

d.

A farmer to do his/her own gas fitting in their home

### Feedback

Your answer is incorrect.

The correct answer is: A gas fitter

### Question 14

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Who is responsible for maintaining gas-fired appliances in a rental suite?

Select one:

☐

a.

The tenant of the building

☐

b.

The manager of the building

☒

c.

The owner of the building

d.

The janitor of the building

### Feedback

Your answer is correct.

The correct answer is: The owner of the building

### Question 15

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

To convert a propane appliance to natural gas, the installer must:

Select one:

a.

first request permission from the safety manager

b.

be a Class "A" gas fitter

c.

follow manufacturer's instructions for the conversion

d.

have it inspected before it can be used

### Feedback

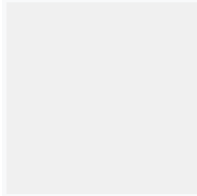

Your answer is correct.

The correct answer is: follow manufacturer's instructions for the conversion

Question **16**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The limits of flammability of propane gas in air are approximately:

Select one:

☐

a.

10% to 45%

☐

b.

4.6% to 14%

☒

c.

2.4% to 9.5%

☐

d.

5% to 15.3%

Feedback

Your answer is correct.

The correct answer is: 2.4% to 9.5%

Question **17**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Name the limits of flammability for natural gas in air:

Select one:

☐

a.

6% to 12%

☐

b.

14% to 24%

☒

c.

4% to 14%

☐

d.

4% to 10%

### Feedback

Your answer is correct.

The correct answer is: 4% to 14%

### Question **18**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Natural gas is composed mainly of:

Select one:

☐

a.

mixture of air and gas

☐

b.

propane

☒

c.

methane

☐

d.

butane

Feedback

Your answer is correct.

The correct answer is: methane

Question **19**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The relative density of propane vapour is approximately:

Select one:

☐

a.

0.8

b.

1.5

c.

2

d.

0.6

### Feedback

Your answer is correct.

The correct answer is: 1.5

### Question **20**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the calorific value of Butane gas?

Select one:

a.

2500 Btu/Cu.Ft. (0.733 kW/cu.ft)

b.

3200 Btu/Cu.Ft. (0.938 kW/cu.ft)

c.

1200 Btu/Cu.Ft. (0.352 kW/cu.ft)

d.

1050 Btu/Cu.Ft. (0.308 kW/cu.ft)

### Feedback

Your answer is correct.

The correct answer is: 3200 Btu/Cu.Ft. (0.938 kW/cu.ft)

### Question 21

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What surface on a propane storage container transfers heat and affects the vaporization rate?

Select one:

a.

The entire wetted surface of the container

b.

The entire surface including the top and bottom

c.

Only the surface that directly faces the sun and receives direct radiation

d.

The entire surface not including the top or bottom

### Feedback

Your answer is correct.

The correct answer is: The entire wetted surface of the container

### Question 22

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

One cubic foot of natural gas at standard temperature and pressure will produce how many kW of heat when it is completely burned?

Select one:

a.

2520 kW

b.

0.293 kW

c.

1,000 kW

d.

10.35 kW

### Feedback

Your answer is incorrect.

The correct answer is: 0.293 kW

### Question **23**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

One cubic foot of propane vapor will produce approximately how many kW when completely burned?

Select one:

a.

26kW

b.

88 980 kW

c.

0.7323 kW

d.

35 310 kW

### Feedback

Your answer is correct.

The correct answer is: 0.7323 kW

Question **24**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The heat generated by the complete combustion of a unit of fuel is commonly referred to as its:

Select one:

☐

a.

combustion value

☒

b.

calorific value

☐

c.

distillation value

☐

d.

flash value

Feedback

Your answer is correct.

The correct answer is: calorific value

Question **25**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which of the following gases has the highest calorific value?

Select one:

☐

a.

Carbon Monoxide

☐

b.

Natural Gas

☒

c.

Butane

☐

d.

Propane

### Feedback

Your answer is correct.

The correct answer is: Butane

### Question **26**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

One cubic meter of propane vapor will produce:

Select one:

☒

a.

88 275 Btu

☐

b.

112 992 Btu

☐

c.

35 310 Btu

☐

d.

25 000 Btu

Feedback

Your answer is correct.

The correct answer is: 88 275 Btu

Question **27**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Absolute pressure is equal to:

Select one:

☐

a.

the atmospheric pressure divided by the gauge pressure

☐

b.

the atmospheric pressure multiplied by the gauge pressure

☐

c.

the gauge pressure minus the atmospheric pressure

☒

d.

the atmospheric pressure plus the gauge pressure

### Feedback

Your answer is correct.

The correct answer is: the atmospheric pressure plus the gauge pressure

### Question 28

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Natural gas must be preheated to approximately \_\_\_\_ °F before it will ignite.

Select one:

☐

a.

3500

☒

b.

1200

c.

1000

d.

212

### Feedback

Your answer is correct.

The correct answer is: 1200

### Question 29

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The flame temperature of natural gas is approximately \_\_\_\_\_ °F.

Select one:

a.

3500

b.

1200

c.

212

d.

1000

### Feedback

Your answer is correct.

The correct answer is: 3500

### Question **30**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The chemical formula for natural gas is:

Select one:

a.

C<sub>4</sub>H<sub>10</sub>

b.

CH<sub>4</sub>

c.

C<sub>2</sub>H<sub>6</sub>

d.

C<sub>3</sub>H<sub>8</sub>

### Feedback

Your answer is correct.

The correct answer is: CH<sub>4</sub>

Question **31**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The chemical formula for propane gas is:

Select one:

☐

a.

CH<sub>4</sub>

☒

b.

C<sub>3</sub>H<sub>8</sub>

☐

c.

C<sub>4</sub>H<sub>10</sub>

☐

d.

C<sub>2</sub>H<sub>6</sub>

Feedback

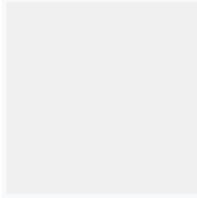

Your answer is correct.

The correct answer is: C<sub>3</sub>H<sub>8</sub>

Question **32**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Complete combustion of 5 cubic feet of propane gas would produce \_\_\_\_\_ kW of heat.

Select one:

a.

3.66

b.

26

c.

12 500

d.

1.46

### Feedback

Your answer is correct.

$(5 \text{ cu.ft} \times 2500 \text{ BTU/cu.ft}) \div 3412$

The correct answer is: 3.66

### Question **33**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

20 imperial gallons of liquid propane would weigh \_\_\_\_ pounds.

Select one:

☐

a.

10

☐

b.

20

☐

c.

200

☒

d.

100

Feedback

Your answer is correct.

$20\text{IMP} \times 10 \text{ lbs/IMP of H}_2\text{O} \times 0.51$  (specific gravity of LP)

The correct answer is: 100

Question **34**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

1 cubic meter of liquid propane would yield how many Btu's?

Select one:

☐

a.

2 500

☐

b.

88 275

☐

c.

23 834 250

☒

d.

675 000

Feedback

Your answer is incorrect.

1 cu.m liquid = 270 cu.m vapor

270 cu.m **X** 35.31 cu.ft/cu.m **X** 2500 BTU/cu.ft

The correct answer is: 23 834 250

Question **35**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The calorific value (heat value) of natural gas is approximately:

Select one:

a.

3,200 Btu/cu.ft 3 (33.1 kW/m<sup>3</sup>)

b.

500 Btu/cu.ft (5.17 kW/m<sup>3</sup>)

c.

1,000 Btu/cu.ft (1 0.34 kW/m<sup>3</sup>)

d.

2,500 Btu/cu.ft (25.86 kW/m<sup>3</sup>)

### Feedback

Your answer is correct.

The correct answer is: 1,000 Btu/cu.ft (1 0.34 kW/m<sup>3</sup>)

### Question 36

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

One cubic meter of natural gas will produce \_\_\_\_\_ BTU

Select one:

a.

35.310

b.

35 310

☐

c.

37.075

☐

d.

37 075

### Feedback

Your answer is correct.

The correct answer is: 35 310

### Question 37

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

A piping system is pressure tested with air to 50 PSIG. The volume of the piping is 100 cu.ft and the temperature of the air in the pipe is 78F. The next day the temperature of the air in the pipe is 45F. What will the new pressure gauge reading be?

Select one:

☒

a.

27.5 psig

☐

b.

60.76 psig

☐

c.

46.03 psig

☐

d.

84.32 psig

### Feedback

Your answer is incorrect.

The correct answer is: 46.03 psig

### Question 38

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The specific gravity of a gas is the:

Select one:

☐

a.

heat in the gas

☒

b.

weight of a gas as compared to an equal volume of air

☐

c.

volume of the gas

☐

d.

weight of a gas as compared to an equal volume of water

### Feedback

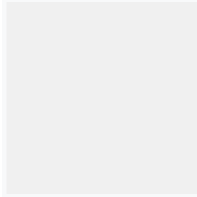

Your answer is correct.

The correct answer is: weight of a gas as compared to an equal volume of air

### Question 39

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Which part of air is involved in the combustion process?

Select one:

a.

Carbon Dioxide

b.

Moisture content

c.

Oxygen

d.

Nitrogen

### Feedback

Your answer is incorrect.

The correct answer is: Oxygen

Question **40**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

A primary cause of incomplete combustion when the appliance is firing at the correct input is:

Select one:

a.

lack of gas

b.

lack of air

c.

too much gas

d.

too much air

Feedback

Your answer is incorrect.

The correct answer is: lack of air

Question **41**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

The identifying products of incomplete combustion are:

Select one:

☐

a.

heat, carbon monoxide and water vapor

☐

b.

carbon monoxide & aldehydes

☒

c.

heat, carbon dioxide, carbon monoxide and nitrogen

☐

d.

heat, carbon dioxide and carbon monoxide

### Feedback

Your answer is incorrect.

The correct answer is: carbon monoxide & aldehydes

### Question 42

Correct

Mark 1.00 out of 1.00

Flag question

Question text

How many cubic feet of combustion air are required for every cubic foot of propane gas?

Select one:

☐

a.

16 Cu.Ft. (0.45 m<sup>3</sup>)

☒

b.

25 Cu. Ft. (0.71 m<sup>3</sup>)

☐

c.

32 Cu.Ft. (0.91 m<sup>3</sup>)

☐

d.

10 Cu.Ft. (0.28 m<sup>3</sup>)

Feedback

Your answer is correct.

The correct answer is: 25 Cu. Ft. (0.71 m<sup>3</sup>)

Question **43**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

What percentage of the air is oxygen?

Select one:

☐

a.

40%

☐

b.

80%

☐

c.

60%

☒

d.

20%

### Feedback

Your answer is correct.

The correct answer is: 20%

### Question **44**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Which example would be most likely to produce carbon monoxide?

Select one:

☐ A

☐ B

☒ C

☐ D

☐ A

☐ C

☐ B

☐ D

### Feedback

Your answer is incorrect.

The correct answer is: B

Question **45**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

The "ultimate" CO<sub>2</sub> percent obtainable with combustion of natural gas is closest to:

Select one:

☐

a.

4%

☐

b.

20%

☐

c.

12%

☒

d.

50%

Feedback

Your answer is incorrect.

The correct answer is: 12%

Question **46**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Providing there is excess air, as the the CO<sub>2</sub> level in the products of combustion decreases, the combustion efficiency:

Select one:

☒

a.

increases

☐

b.

is unaffected

☐

c.

decreases

☐

d.

remains constant

Feedback

Your answer is incorrect.

The correct answer is: decreases

Question **47**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

If a combustion analysis indicates carbon monoxide, a gas fitter should:

Select one:

☐

a.

install a power venter

b.

check air supply, clock appliance, and clean burners

c.

decrease secondary air and increase input

d.

turn appliance regulator adjusting screw clockwise and decrease primary air

### Feedback

Your answer is incorrect.

The correct answer is: check air supply, clock appliance, and clean burners

### Question 48

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

"Barber" burners use the \_\_\_\_\_ principle.

Select one:

a.

atmospheric inshot

b.

flame impingement

c.

ribbon port

d.

flame retention

### Feedback

Your answer is incorrect.

The correct answer is: flame retention

### Question 49

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

If an appliance with an atmospheric burner is found to have a 7.5% CO<sub>2</sub> level and the input is correct, the gas fitter should:

Select one:

a.

tape over some of the air openings on the appliance (to reduce excess air)

b.

do nothing more- 7.5% is acceptable

c.

install different burners from a higher efficiency appliance

☐

d.

increase input

### Feedback

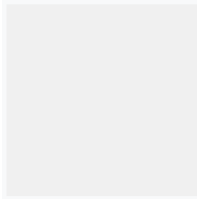

Your answer is correct.

The correct answer is: do nothing more- 7.5% is acceptable

### Question 50

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which example below would be most likely to cause incomplete combustion?

Select one:

☐

A

☐

B

C

D

### Feedback

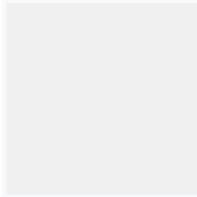

Your answer is correct.

The correct answer is: C

### Question 51

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Flame lift-off can be corrected by:

Select one:

a.

increasing pipe size to appliance

b.

adding more secondary air

c.

decreasing primary air

d.

turning the regulator adjusting screw clockwise

### Feedback

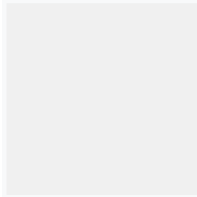

Your answer is incorrect.

The correct answer is: decreasing primary air

### Question 52

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The low-pressure area in the venturi of an atmospheric burner is created by:

Select one:

a.

the low gas pressure in the manifold

b.

the opening in the air shutter which allows primary air to enter

c.

the high velocity gas flow through the orifice

d.

the low velocity gas flow through the orifice

### Feedback

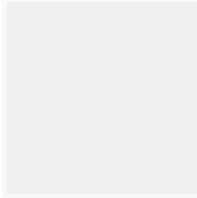

Your answer is correct.

The correct answer is: the high velocity gas flow through the orifice

### Question 53

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

A volume of natural gas is burned to create 2,000,000 Btuh of heat. The volume of carbon dioxide produced would be:

Select one:

a.

10 000 cu.ft

b.

4000 cu.ft

c.

2000 cu.ft

d.

20 000 cu.ft

### Feedback

Your answer is incorrect.

$2\,000\,000\text{ BTU} \div 1000\text{ BTU/cu.ft} = 2000\text{ cu.ft} \times 1$

The correct answer is: 2000 cu.ft

Question **54**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The rapid combination of fuel with oxygen resulting in a release of heat would be a good definition of:

Select one:

a.

combustion

b.

relative heat value

c.

flash point

d.

calorific value

### Feedback

Your answer is correct.

The correct answer is: combustion

### Question 55

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A product of incomplete combustion which is colorless, odorless, tasteless and extremely toxic is:

Select one:

☐

a.

carbon dioxide

☒

b.

carbon monoxide

☐

c.

argon

☐

d.

aldehydes

### Feedback

Your answer is correct.

The correct answer is: carbon monoxide

### Question 56

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

When you burn a hydrocarbon fuel, the products of complete combustion contain:

Select one:

☒

a.

$\text{CO} + \text{N}_2 + \text{H}_2\text{O}$

☐

b.

$\text{CO}_2 + \text{CO} + \text{N}_2$

☐

c.

$\text{CO} + \text{CO}_2 + \text{H}_2\text{O}$

☐

d.

$\text{CO}_2 + \text{N}_2 + \text{H}_2\text{O}$

### Feedback

Your answer is incorrect.

The correct answer is:  $\text{CO}_2 + \text{N}_2 + \text{H}_2\text{O}$

### Question 57

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Primary air would be defined as that air:

Select one:

☐

a.

premixed with the gas by the supplier

☐

b.

surrounding the gas flame

c.

drawn in at the burner inlet before ignition

d.

heated and circulated by the appliance

### Feedback

Your answer is correct.

The correct answer is: drawn in at the burner inlet before ignition

### Question 58

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

During the combustion of natural gas the combustion products in the vent are cooled down below 120°F. Which of the following conditions will occur?

Select one:

a.

The flue products will condense and corrode the vent

b.

The quantity of carbon dioxide will increase

c.

The quantity of CO will increase

☐

d.

The carbon in the flue gas will condense and plug the vent with soot

### Feedback

Your answer is correct.

The correct answer is: The flue products will condense and corrode the vent

### Question 59

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Which of the following conditions would cause floating flames?

Select one:

☐

a.

A blocked vent cap

☐

b.

A blocked flue outlet

☐

c.

Low gas pressure

☒

d.

Too much primary air

## Feedback

Your answer is incorrect.

The correct answer is: A blocked flue outlet

### Question 60

Incorrect

Mark 0.00 out of 1.00

### Question text

In the illustration, the valve shown is:

Select one:

a.  
normally open

b.

normally closed

☐

c.

electrically actuated by the thermostat

☐

d.

not recommended for low-pressure gas systems

### Feedback

Your answer is incorrect.

The correct answer is: normally open

### Question 61

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The restricting element of a regulator is the:

Select one:

☒

a.

valve disc

☐

b.

limiting orifice

☐

c.

diaphragm

d.

spring

### Feedback

Your answer is correct.

The correct answer is: valve disc

### Question 62

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The minimum inlet pressure to a 2 PSIG (14 kPa) piping system sized with the current piping tables requires a regulator to reduce the pressure to 7 inches w.c. ( 1.75 kPa). The regulator is located some distance from the meter. Which of the following would you select as the inlet pressure to the regulator?

Select one:

a.

5 PSIG (34 kPa)

b.

0.5 PSIG (3.5 kPa)

c.

7 in.wc (1.75 kPa)

d.

2.5 PSIG (17 kPa)

### Feedback

Your answer is correct.

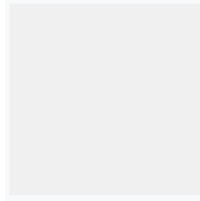

Table A.4 2PSI - 1.5PSI

The correct answer is: 0.5 PSIG (3.5 kPa)

### Question 63

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

A gas pressure regulator, when installed outdoors, should have the vent:

Select one:

a.

pipel away to a safe location, pointing upward

b.

opening pointing down

c.

opening pointing in a horizontal position to a safe location

d.

restricted with an approved device

### Feedback

Your answer is incorrect.

B149.1

5.2.2.3 / 5.5.6

The correct answer is: opening pointing down

Question **64**

Incorrect

Mark 0.00 out of 1.00

Question text

Using the image below, identify the item indicated by the green arrow.

Select one:

a.

relief valve spring

b.

gas outlet

c.

loading spring

d.

vent limiter spring

### Feedback

Your answer is incorrect.

The correct answer is: relief valve spring

### Question 65

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

An undersized vent pipe on a regulator may cause the:

Select one:

a.

regulator to go into a hunting condition

b.

pilot safety to fail

c.

restricting element to stay fully closed

d.

restricting element to stay fully open

### Feedback

Your answer is correct.

The correct answer is: regulator to go into a hunting condition

### Question 66

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Using the image, identify the following item indicated by the green arrow.

Select one:

a.

inlet

b.

bellows

c.

relief valve

d.

valve disc

### Feedback

Your answer is incorrect.

The correct answer is: valve disc

### Question **67**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Using the image, identify the following item.

Select one:

a.  
diaphragm

b.  
surge arrestor

c.  
loading element

d.  
regulator tower separation

Feedback

Your answer is correct.

The correct answer is: diaphragm

Question **68**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What type of regulator is shown in the image?

Select one:

○

## Two stage propane regulator

○

Utility supplied meter regulator, for low pressure

Industrial appliance regulator

First stage propane regulator

## Feedback

Your answer is incorrect.

The correct answer is: Two stage propane regulator

Question **69**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

When installing an appliance regulator the vent opening is completely blocked. This will cause the regulator to:

Select one:

a.

regulate the gas flow at the incorrect pressure

b.

regulate the gas flow at the correct pressure

c.

go into a hunting condition

d.

remain permanently closed

Feedback

Your answer is incorrect.

The correct answer is: regulate the gas flow at the incorrect pressure

Question **70**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

If the orifice in a regulator is too small:

Select one:

☐

a.

the restricting element will fully open and not regulate downstream pressure

☐

b.

the regulator will go into a hunting condition

☐

c.

the regulator will open and close rapidly causing disc damage

☒

d.

the pressure on the downstream side of the regulator will become too high

### Feedback

Your answer is incorrect.

The correct answer is: the restricting element will fully open and not regulate downstream pressure

### Question 71

Correct

Mark 1.00 out of 1.00

Flag question

Question text

On a combination gas valve the regulator controls:

Select one:

☐

a.

only the pilot gas pressure

☒

b.

only the main burner gas pressure

☐

c.

the inlet pressure to the gas valve

☐

d.

the size of the pilot burner

Feedback

Your answer is correct.

The correct answer is: only the main burner gas pressure

Question **72**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

A two-stage propane regulator would typically be set for:

Select one:

☐

a.

first stage 15 inches w.c., second stage 11 inches w.c.

☐

b.

first stage 2 PSIG, second stage 7 inches w.c.

☒

c.

first stage 10 PSIG, second stage 11 inches w.c ..

☐

d.

first stage 5 PSIG, second stage 14 inches w.c.

### Feedback

Your answer is correct.

The correct answer is: first stage 10 PSIG, second stage 11 inches w.c ..

### Question **73**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Increasing the spring force in an appliance regulator will:

Select one:

☐

a.

damage the diaphragm

☐

b.

increase the pilot flame

c.

increase the manifold pressure

d.

decrease the manifold pressure

### Feedback

Your answer is incorrect.

The correct answer is: increase the manifold pressure

### Question 74

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A pressure regulator is said to be in equilibrium when the:

Select one:

a.

opening force of the diaphragm is equal to the closing force of the spring

b.

opening force of the spring is equal to the closing force of the downstream pressure

c.

opening force of the diaphragm is equal to the closing force of the orifice

d.

opening force of the spring is equal to the closing force of the upstream pressure

### Feedback

Your answer is correct.

The correct answer is: opening force of the spring is equal to the closing force of the downstream pressure

### Question **75**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The loading force in most regulators is provided by the:

Select one:

a.

diaphragm

b.

spring

c.

disc

d.

inlet gas pressure

### Feedback

Your answer is correct.

The correct answer is: spring

### Question **76**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

\_\_\_\_\_ is the term which describes outlet pressure which is lower than set point pressure during flow conditions.

Select one:

a.

Lockup

b.

Boost

c.

Droop

d.

Rise

### Feedback

Your answer is correct.

The correct answer is: Droop

Question **77**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

When the inlet supply pressure to a line pressure regulator exceeds 1/2 PSIG, it shall:

Select one:

☐

a.

be bypassed

☒

b.

be of a positive shut-off type

☐

c.

have a leak-limiting orifice

☐

d.

have a valve located immediately downstream

Feedback

Your answer is correct.

B149.1

5.2.1.4

The correct answer is: be of a positive shut-off type

Question **78**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

If a regulator is installed backwards in a piping system, what is the most likely result?

Select one:

☐

a.

The regulator will open completely

☒

b.

The regulator will close completely

☐

c.

Pressure downstream will rise above set point

☐

d.

No difference- they are non-directional valves

### Feedback

Your answer is correct.

The correct answer is: The regulator will close completely

### Question **79**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

When selecting the components of a service regulator, the required downstream pressure will be determined by:

Select one:

☐

a.

the selection of the restricting element

☐

b.

the selection of the proper body size

☒

c.

the selection of the measuring element

☐

d.

the selection of the loading element

### Feedback

Your answer is incorrect.

The correct answer is: the selection of the loading element

### Question 80

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The leak limiting device shown below must be installed as shown in:

Select one:

A

B

C

D

### Feedback

Your answer is correct.

The correct answer is: A

### Question 81

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

If a 5 PSIG system regulator has a 3/4 inch vent tapping and the vent line must run 65 feet, what must be done?

Select one:

a.

Use 1 inch pipe for the entire length - make the change at the vent tapping

☐

b.

Use 3/4 inch for the first 50 feet, then increase to 1 inch

☐

c.

Use 3/4 inch pipe for the entire length- you may not change sizes

☐

d.

Use 3/4 inch pipe for the first 20 feet, then increase to 1 inch

### Feedback

Your answer is correct.

5.5.4(b)(ii)

The correct answer is: Use 1 inch pipe for the entire length - make the change at the vent tapping

### Question 82

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Too many fittings on a vent line could cause:

Select one:

☐

a.

the regulator to "hunt"

b.

the regulator to lock-up

c.

the restricting element to fully close

d.

the restricting element to fully open

### Feedback

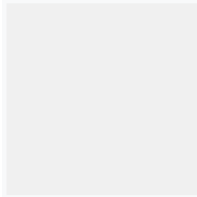

Your answer is incorrect.

The correct answer is: the regulator to "hunt"

### Question 83

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

The device illustrated is a/an:

Select one:

a.

zero governor

b.

two-stage regulator

c.

earthquake valve

d.

pounds-to-inches (line pressure) regulator

### Feedback

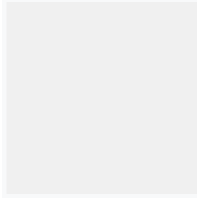

Your answer is incorrect.

The correct answer is: pounds-to-inches (line pressure) regulator

Question **84**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The purpose of a pitot tube in a regulator is to:

Select one:

☐

a.

increase upstream pressure during static conditions

☒

b.

keep downstream pressure closer to set point during flow conditions

☐

c.

provide mechanical advantage for positive shut-off

☐

d.

relieve unwanted gases when overpressure occurs

### Feedback

Your answer is correct.

The correct answer is: keep downstream pressure closer to set point during flow conditions

### Question **85**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

If a 5 PSIG line-pressure regulator (with internal relief) was installed in a boiler room, which of the following would be required?

Select one:

☐

a.

It shall be of negative shut-down type

☒

b.

All downstream piping must be Type "K" copper tubing

☐

c.

The vent must be piped to a safe location outdoors

☐

d.

A bypass shall be installed

### Feedback

Your answer is incorrect.

The correct answer is: The vent must be piped to a safe location outdoors

### Question 86

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A line pressure regulator operating at 2 PSIG or less shall be exempt from the requirements of Clause 5.2.1.5 (B) when equipped with which of the following?

Select one:

a.

A union on the downstream piping

b.

A negative shut-down system

c.

A vent leak-limiting system

d.

A pitot tube located in an area of high velocity and low pressure

### Feedback

Your answer is correct.

B149.1

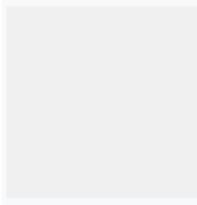

5.2.2.4 / 5.2.3.1

The correct answer is: A vent leak-limiting system

Question **87**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The device illustrated is a/an:

Select one:

☐

a.  
redundant valve

☐

b.  
ball valve

☐

c.  
solenoid valve

☒

d.  
earthquake valve

Feedback

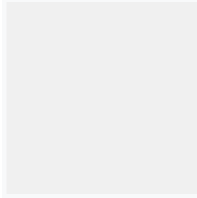

Your answer is correct.

The correct answer is: earthquake valve

Question **88**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A forced air furnace through which the circulating air flows in the opposite direction to the flue gas is a/an:

Select one:

a.  
counter flow furnace

b.  
attic furnace

c.  
floor furnace

d.  
wall furnace

### Feedback

Your answer is correct.

The correct answer is: counter flow furnace

Question **89**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Identify the correct components indicated by the green arrows in the illustration.

Select one:

a.  
outer jacket; hot water pipe

b.  
control valve; cold water inlet

c.

draft hood; drain

d.

control valve; hot water outlet

### Feedback

Your answer is correct.

The correct answer is: control valve; cold water inlet

### Question 90

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

The illustration shows four basic kinds of appliances. Identify the correct series of applications and correct names for the appliances:

Select one:

☐

a.

#1 - Power Direct Vent, #2 - Natural Draft, #3 - Power Vented, #4 - Direct Vent

☒

b.

#1 - Natural Draft, #2 - Direct Vent, #3 - Power Vented, #4 - Power Direct Vent

☐

c.

#1 - Natural Draft, #2 - Power Vented, #3 - Direct Vent, #4 - Power Direct Vent

☐

d.

#1 - Direct Vent, #2 - Power Vented, #3 - Natural Draft, #4 - Power Direct Vent

### Feedback

Your answer is incorrect.

The correct answer is: #1 - Natural Draft, #2 - Power Vented, #3 - Direct Vent, #4 - Power Direct Vent

### Question 91

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Identify the item indicated by the green arrow in the image.

Select one:

a.

ventilation air opening

☐

b.

combustion air opening

☐

c.

ventilation grill

☐

d.

service access

### Feedback

Your answer is incorrect.

The correct answer is: combustion air opening

### Question 92

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The basic job of an operating control on a boiler is to:

Select one:

☐

a.

start pump when boiler water gets too cold

☐

b.

energize burner when boiler water gets too hot

c.

energize the burner when boiler water gets too cold

d.

energize burner when boiler water level gets too low

### Feedback

Your answer is correct.

The correct answer is: energize the burner when boiler water gets too cold

### Question 93

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

The fan control on a forced air furnace generally operates on:

Select one:

a.

1000 mV

b.

800 mV

c.

24 V

d.

110 V

### Feedback

Your answer is incorrect.

The correct answer is: 110 V

### Question **94**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A residential gas range with fixed orifices can be converted from propane to natural gas by:

Select one:

a.

adjusting the burner spoiler screw

b.

adjusting the primary air shutter

c.

change orifices and manifold pressure

d.

increasing or decreasing the house line pressure

### Feedback

Your answer is correct.

The correct answer is: change orifices and manifold pressure

Question **95**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

A direct fired make-up air heater (DFMAH):

Select one:

☐

a.

has a draft hood

☒

b.

has a barometric draft regulator

☐

c.

does not have a heat exchanger

☐

d.

requires a stainless steel heat exchanger

Feedback

Your answer is incorrect.

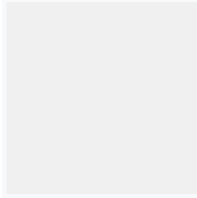

The correct answer is: does not have a heat exchanger

Question **96**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The field conversion of a new gas appliance from the type of gas specified on the rating plate to another type of gas is:

Select one:

☐

a.

prohibited -the conversion of new appliances is unacceptable

☐

b.

only permitted when the conversion is done by the supplier

☒

c.

allowed, if the conversion is done by a gas fitter and the rating plate is permanently marked for the gas being used

☐

d.

permitted - only if authorized by the local gas inspector

### Feedback

Your answer is correct.

B149.1

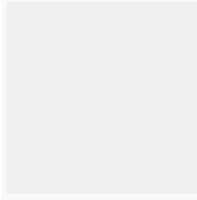

4.5.4

The correct answer is: allowed, if the conversion is done by a gas fitter and the rating plate is permanently marked for the gas being used

Question **97**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A residential gas range with universal orifices can be converted from propane to natural gas by:

Select one:

a.

turning the orifice cap clockwise and change the regulator setting

b.

adjusting the primary air shutters

c.

turning the orifice cap counter-clockwise and change the regulator setting

d.

decreasing the manifold pressure

### Feedback

Your answer is correct.

The correct answer is: turning the orifice cap counter-clockwise and change the regulator setting

Question **98**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The temperature setting of the high limit on a forced air furnace shall not exceed:

Select one:

☐

a.

350F

☒

b.

250F

☐

c.

160F

☐

d.

200F

### Feedback

Your answer is correct.

B149.1

7.8.6(b)

The correct answer is: 250F

### Question 99

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

On some older forced air furnaces, an air temperature sensing device is used to operate both the:

Select one:

☐

a.

fan control and the rollout switch

☐

b.

fan control and the damper motor

☐

c.

fan control and the limit switch

☒

d.

fan control and the thermostat

### Feedback

Your answer is incorrect.

The correct answer is: fan control and the limit switch

Question **100**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

A valve used to automatically shut-off the gas supply on a fire suppression system shall be located:

Select one:

☐

a.

under the protected area (exhaust canopy)

☒

b.

upstream of the manual shut-off valve for the water heater

☐

c.

near the largest input appliance

☐

d.

outside of the protected area

### Feedback

Your answer is incorrect.

B149.1

4.19.2

The correct answer is: outside of the protected area

### Question **101**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

If the dip tube in a hot water tank breaks at the top of the tank, the most likely result would be:

Select one:

a.

the incoming cold water will mix with the hot water leaving producing tepid or inconsistent delivery temperature

b.

the water at the top of the tank will always be cold

c.

the water would be too hot

d.

the tank could collapse if exposed to a backsiphonage condition

### Feedback

Your answer is incorrect.

The correct answer is: the incoming cold water will mix with the hot water leaving producing tepid or inconsistent delivery temperature

### Question 102

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the minimum vent distance for a commercial gas clothes dryer from a fresh air intake?

Select one:

☐

a.

20 Ft. (6.09 m)

☐

b.

3 Ft. (0.91 m)

☐

c.

30 Ft. (9.14 m)

☒

d.

10 Ft. (3.05 m)

### Feedback

Your answer is correct.

B149.1

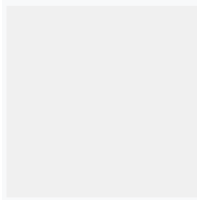

7.4.4

The correct answer is: 10 Ft. (3.05 m)

### Question 103

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

An industrial site boiler room contains an appliance rated at 1,800,000 Btu/h (527.22 kW) (power burner, not equipped with a draft hood) and a boiler rated at 950,000 Btu/h (278.25 kW) (equipped with a barometer damper). Ventilation air is being delivered to the units through a hole-in-the-wall covered by wire mesh having a free air allowance of 80%. The

wire mesh should have a minimum area of \_\_\_\_\_(round up or down to nearest whole number):

Select one:

a.

25 square inches (161 cm<sup>2</sup>)

b.

17.5 square inches (113 cm<sup>2</sup>)

c.

14 square inches (90 cm<sup>2</sup>)

d.

20 square inches (129 cm<sup>2</sup>)

### Feedback

Your answer is correct.

The correct answer is: 25 square inches (161 cm<sup>2</sup>)

### Question 104

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

What is the minimum diameter of the combustion air requirement for a single family dwelling complying with code clauses 8.2.1 which has a 100,000 Btu/h (29.30 kW) furnace, and a 36,000 Btu/h (10.54 kW) hot water tank if both appliances are equipped with a draft control device and the length of the duct in 27 feet?

Select one:

☐

a.

6-inch

☐

b.

4-inch

☐

c.

3-inch

☒

d.

5-inch

### Feedback

Your answer is incorrect.

Complies with 8.2.1(a)(b)

The correct answer is: 6-inch

### Question 105

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A single family dwelling, complying with 8.2.1 (a) or (b), has a furnace with an input of 135,000 Btu/h (39.54 kW) and a hot water tank rated at 40,000 Btu/h (17.58 kW). Both appliances are equipped with draft control devices. If the duct is 35 feet (10.67 m) in developed length, the acceptable round duct equivalent is:

Select one:

a.

6 inches (15 cm)

b.

8 inches (20 cm)

c.

10 inches (25 cm)

d.

7 inches (18 cm)

### Feedback

Your answer is correct.

25 inch sq = 6inch

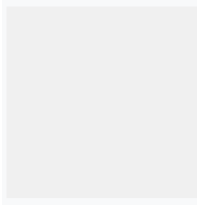

increase 1 pipe size 7inch

The correct answer is: 7 inches (18 cm)

### Question **106**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A boiler room contains the following equipment:

1 - 3,000,000 Btu/h (878.85 kW) appliance (barometric control)

2- 300,000 Btu/h (87.89 kW) hot water tanks (draft hoods)

1 -10,000,000 Btu/h (2,929.50 kW) boiler (barometric control)

1 - 2,000,000 Btu/h (585.90 kW) duct heater (no draft control)

Calculate the grille area for combustion air supply if the grilles efficiency is 75% (round up or down to nearest whole number):

Select one:

☐

a.

1,635-inch<sup>2</sup>

☐

b.

1,410-inch<sup>2</sup>

☒

c.

1,480-inch<sup>2</sup>

☐

d.

1,575-inch<sup>2</sup>

### Feedback

Your answer is correct.

The correct answer is: 1,480-inch<sup>2</sup>

### Question 107

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A gas-fired appliance equipped with a draft hood is rated for 90,000 Btu/h (26.36 kW). The total air required for complete combustion is:

Select one:

a.

90 CFH (2.54 m<sup>3</sup>)

b.

900 CFH (25.49 m<sup>3</sup>)

c.

2,700 CFH (76.46 m<sup>3</sup>)

d.

1,350 CFH (38.23 m<sup>3</sup>)

### Feedback

Your answer is correct.

The correct answer is: 2,700 CFH (76.46 m<sup>3</sup>)

### Question 108

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A single family dwelling complying with 8.2.1 (a) or (b) is equipped with a boiler and a hot water tank with a total input of 140,000 Btu/h (41 kW). Calculate the diameter of a round combustion air duct if it is only 12 feet (3.66 m) long (both units have draft hoods):

Select one:

a.

3 inch (7.62 cm) diameter

b.

4 inch (101.6 mm) diameter

c.

5 inch (127 mm) diameter

d.

6 inch (152.4 mm) diameter

### Feedback

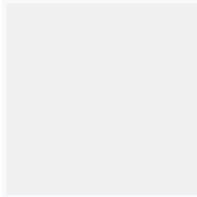

Your answer is correct.

The correct answer is: 5 inch (127 mm) diameter

### Question 109

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A commercial building has a hot water boiler equipped with a draft control device with an input of 3,250,000 Btu/h (951.82 kW). The combustion air opening is a hole-in-the-wall covered by a 50% free air grill. The area of the grill required for combustion air is (round up or down to nearest whole number):

Select one:

a.

244 square inches (1574 cm<sup>2</sup>)

b.

607 square inches (3,916 cm<sup>2</sup>)

☐

c.

109 square inches (703 cm<sup>2</sup>)

☐

d.

163 square inches (1,051 cm<sup>2</sup>)

### Feedback

Your answer is correct.

The correct answer is: 607 square inches (3,916 cm<sup>2</sup>)

### Question 110

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

A boiler has an input of 200,000 Btu/h (58.58 kW), what is the volume of air required for theoretical combustion:

Select one:

☒

a.

200 cubic feet (5.66 m<sup>3</sup>)

☐

b.

2,000 cubic feet (53.63 m<sup>3</sup>)

☐

c.

6,000 cubic feet (169.90 m<sup>3</sup>)

d.

1,000 cubic feet (28.32 m<sup>3</sup>)

### Feedback

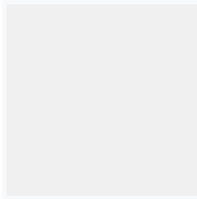

Your answer is incorrect.

The correct answer is: 2,000 cubic feet (53.63 m<sup>3</sup>)

### Question 111

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

In a direct vent appliance, the air for combustion is:

Select one:

a.

Drawn in from openings in the bottom of the appliance

b.

Drawn in from the outside to the combustion chamber

c.

Drawn in from an opening in the front of the appliance

d.

Drawn in through the open glass doors on the appliance

### Feedback

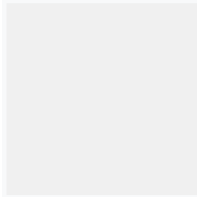

Your answer is incorrect.

The correct answer is: Drawn in from the outside to the combustion chamber

### Question **112**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

A boiler without a draft control device is fired to an input of 3,000,000 Btuh. What volume of air would be required if being supplied by a combustion air fan?

Select one:

☐

a.

90 000 CFH

☐

b.

45 000 CFH

☒

c.

30 000 CFH

☐

d.

3 000 CFH

### Feedback

Your answer is incorrect.

The correct answer is: 90 000 CFH

Question **113**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Size the combustion air supply for a residential building complying with Clause 8.2.1 (a) & (b). The residence has a 140,000 Btuh mid-efficient furnace with no draft control and a 60,000 Btuh hot water tank with draft control. The ductwork runs 40 feet horizontally from the mechanical room.

Select one:

a.

5 in.

b.

3 in.

c.

6 in.

d.

4 in.

Feedback

Your answer is incorrect.

60MBH ==> T.8.1 ==> 11 sq in 4 inch

200MBH ==> T.8.2 ==> 14 sq in 5 inch

Increase 1 pipe size 6 inch

The correct answer is: 6 in.

Question **114**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Calculate the openings required for a mechanical room located within a leaky structure. The mechanical room has a natural draft, atmospheric boiler rated at 175,000 Btuh and a 75,000 Btuh natural draft unit heater. The volume of the structure is 15,000 ft<sup>3</sup> and the openings are to be covered with an 80% mesh (pick closest answer):

Select one:

☐

a.

36 sq.in

☒

b.

45 sq.in

☐

c.

312.5 sq.in

☐

d.

250 sq. in

Feedback

Your answer is incorrect.

B149.1

8.2.6

$250\text{MBH} / 80 = 312.5 \text{ sq.in}$

The correct answer is: 312.5 sq.in

Question **115**

Not answered

Marked out of 1.00

Flag question

Question text

Calculate the size of openings required for a 1,750,000 Btuh natural draft boiler and a 750,000 Btuh boiler with a power burner. The openings are to have louvers with a 60% free area (pick closest answer):

Select one:

a.

combustion air: 221 sq. in. -ventilation air: 22 sq. in.

b.

combustion air: 369 sq. in. -ventilation air: 37 sq. in.

c.

combustion air: 139 sq. in.- ventilation air: 17 sq. in.

d.

combustion air: 416 sq. in. -ventilation air: 42 sq. in.

Feedback

Your answer is incorrect.

The correct answer is: combustion air: 369 sq. in. -ventilation air: 37 sq. in.

Question **116**

Not answered

Marked out of 1.00

Flag question

Question text

Calculate the size of combustion air opening required for a residential building with hot water tank rated at 55,000 Btuh and a furnace rated at 125,000 Btuh, both with draft control. The building does not comply with Clause 8.2.1 (a) or (b). The louvers have a free area of 70% and the volume of the structure is 6,000 cubic feet (pick closest answer):

Select one:

☐

a.

36 sq. in.

☐

b.

41 sq. in.

☐

c.

23 sq. in.

☐

d.

29 sq. in.

Feedback

Your answer is incorrect.

Table 8.3

29 sq.in / 70%

The correct answer is: 41 sq. in.

Question **117**

Not answered

Marked out of 1.00

Flag question

Question text

Calculate the combustion and ventilation air openings for two 250,000 Btuh appliances with no draft control. The openings are to be covered with 80% mesh (pick closest answer):

Select one:

☐

a.

combustion air opening: 21 sq. in.- ventilation air: 12.5 sq. in.

☐

b.

combustion air opening: 134 sq. in.- ventilation air: 12.5 sq. in.

☐

c.

combustion air opening: 21 sq. in. -ventilation air: 2.12 sq. in.

☐

d.

combustion air opening: 134 sq. in. -ventilation air: 13.4 sq. in.

Feedback

Your answer is incorrect.

The correct answer is: combustion air opening: 21 sq. in.- ventilation air: 12.5 sq. in.

Question **118**

Not answered

Marked out of 1.00

Flag question

### Question text

Calculate the combustion air requirements for a 50,000 Btuh hot water tank installed in a structure. The hot water tank has draft control and the building complies with Clause 8.2.1 (a) and (b):

Select one:

☐

a.

No air required

☐

b.

50 inches squared for combustion air

☐

c.

50 inches squared for combustion air and 50 inches squared for ventilation air

☐

d.

100 inches squared of free area

### Feedback

Your answer is incorrect.

B149.1

8.2.3 / 8.2.6

The correct answer is: No air required

Question **119**

Not answered

Marked out of 1.00

Flag question

### Question text

The volume of air required to achieve theoretical combustion for 50 cubic feet of natural gas is:

Select one:

☐

a.

150 cubic feet

☐

b.

5,000 cubic feet

☐

c.

500 cubic feet

☐

d.

50 cubic feet

### Feedback

Your answer is incorrect.

10 to 1 CFH air to CFH Nat gas

The correct answer is: 500 cubic feet

Not answered

Marked out of 1.00

Flag question

### Question text

A single family dwelling complying with Clause 8.2.1 (a) has a 220,000 Btuh fan-assist furnace. What is the required diameter of the combustion air duct?

Select one:

☐

a.

6 inch

☐

b.

4 inch

☐

c.

5 inch

☐

d.

7 inch

### Feedback

Your answer is incorrect.

No draft control T.8.2

The correct answer is: 5 inch

Question **121**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

When initially setting a barometric draft control for proper operating conditions:

Select one:

☐

a.

the gate must be set so the upper portion of the gate swings in, on an increase in up-draft

☐

b.

the gate must be set at midpoint using weights

☐

c.

you must ensure closure of the gate with a down-draft

☒

d.

the determination of the gate position must be done by instruments (draft gauge)

### Feedback

Your answer is correct.

The correct answer is: the determination of the gate position must be done by instruments (draft gauge)

Question **122**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

A down draft through a vent on an atmospheric fired appliance will cause

Select one:

☐

a.

Probable pilot outage and distortion of main flame

☐

b.

Spillage through the front opening of the combustion chamber cutting of secondary air

☒

c.

Spillage of products of combustion at the draft diverter with no effect to burner combustion

☐

d.

Production of carbon monoxide

Feedback

Your answer is correct.

The correct answer is: Spillage of products of combustion at the draft diverter with no effect to burner combustion

### Question text

What is the minimum horizontal clearance from an obstruction to a vent termination without increasing the height ?

Select one:

☐

a.

10 feet (3.66 m)

☒

b.

4 feet (1.22 m)

☐

c.

2 feet (0.6 m)

☐

d.

8 feet (2.44 m)

### Feedback

Your answer is incorrect.

8.14.2

The correct answer is: 10 feet (3.66 m)

### Question **126**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The illustration below is of what ?

Select one:

a.

A flex chimney liner

b.

Mid-efficiency direct vent chimney liner

c.

B-vent chimney liner

d.

Specialty venting for high efficiency appliance

### Feedback

Your answer is correct.

The correct answer is: A flex chimney liner

Question **127**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Draft in a vent is created by

Select one:

a.

The outdoor temperature and the area of the vent

b.

Atmospheric pressure and height of the vent

c.

The height and diameter of the vent

d.

The difference in weight of the air outside and the combustion gases inside the vent

### Feedback

Your answer is correct.

The correct answer is: The difference in weight of the air outside and the combustion gases inside the vent

### Question **128**

Correct

Mark 1.00 out of 1.00

### Question text

A chimney or vent is

Select one:

a.

Any part of a venting system which conveys flue gases

b.

Any vertical section of the venting system, including offsets, which conveys flue gases to the outdoors

c.

Always a Type B-vent or tile-lined chimney

d.

Everything downstream of the draft hood outlet or flue collar

### Feedback

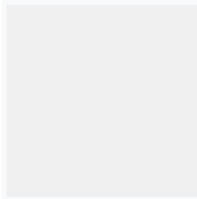

Your answer is incorrect.

The correct answer is: Any vertical section of the venting system, including offsets, which conveys flue gases to the outdoors

### Question 130

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

When can a gas appliance installed in a dwelling unit be connected to a flue serving a solid-fuel fireplace ?

Select one:

a.

When it is connected through a separate opening and above the solid-fuel appliance

b.

A new vent must be installed

c.

Only when the solid fuel fireplace is shut off permanently

d.

Never

### Feedback

Your answer is incorrect.

8.12.3

The correct answer is: Only when the solid fuel fireplace is shut off permanently

### Question 131

Incorrect

Flag question

### Question text

The type of draft that occurs in the combustion chamber of an appliance equipped with a draft hood is

Select one:

a.

Positive pressure draft

b.

Negative over-fire draft

c.

Neutral over-fire draft

d.

Negative pressure draft

### Feedback

Your answer is incorrect.

The correct answer is: Neutral over-fire draft

### Question **132**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The vent is

Select one:

a.

That portion of a venting system designed to convey flue gases directly to the outdoors

b.

The pipe that connects the furnace to the water heater

c.

The vertical section of pipe that connects the furnace to the chimney

d.

The horizontal section of pipe that connects the furnace to the chimney

### Feedback

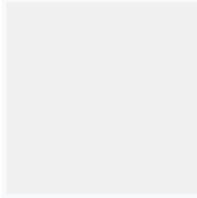

Your answer is correct.

The correct answer is: That portion of a venting system designed to convey flue gases directly to the outdoors

Question **133**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The above diagram is of a commercial B-vent. Please indicate C

Select one:

a.

Air space

b.

Aluminum casing

c.

Galvanized casing

d.

Condensate path

### Feedback

Your answer is correct.

The correct answer is: Galvanized casing

### Question **134**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

The minimum allowable diameter for a round vent is

Select one:

a.

5 inches (12.7 cm)

b.

3 inches (7.62 cm)

c.

2 inches (5.08 cm)

d.

4 inches (10.16 cm)

### Feedback

Your answer is incorrect.

8.13.3

The correct answer is: 3 inches (7.62 cm)

Question **135**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The difference in temperature between the flue gas in the vent and the ambient air is known as the

Select one:

a.

Gross stack temperature

b.

Theoretical temperature

c.

Net stack temperature

d.

Ultimate stack temperature

Feedback

Your answer is correct.

The correct answer is: Net stack temperature

Question **136**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

A single fan-assisted furnace may be

Select one:

a.

Vented with Schedule 40 PVC or ABS pipe

b.

Vented directly into a tile-lined masonry chimney

c.

Vented directly into any size tile-lined masonry chimney provided the chimney also serves a gas water heater

d.

vented into a tile-lined masonry chimney provided the chimney is first lined with an approved Type B -vent

Feedback

Your answer is correct.

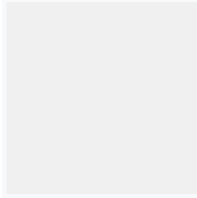

The correct answer is: vented into a tile-lined masonry chimney provided the chimney is first lined with an approved Type B -vent

Question **137**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

If a single fan-assisted appliance is vented into a masonry chimney lined with an approved Type B -vent and has three elbows in the vent connector , the capacity of the chimney liner shall be reduced by

Select one:

☐

a.

30 %

☐

b.

15 %

☐

c.

20 %

☒

d.

10 %

### Feedback

Your answer is incorrect.

C.2.4

The correct answer is: 15 %

Question **138**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which of the following limitations applies to B-vents ?

Select one:

☐

a.

It can only be used on condensing appliances

☐

b.

It may only be used in the same room as the appliance

☒

c.

It may not be used where vent temperatures exceed 470 °F (244°C)

☐

d.

It may only be used on recessed wall heaters

### Feedback

Your answer is correct.

The correct answer is: It may not be used where vent temperatures exceed 470 °F (244°C)

### Question **139**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the minimum gauge thickness of a 5 inch diameter single-wall vent connector serving a draft hood equipped appliance ?

Select one:

a.

22

b.

24

c.

28

d.

26

Feedback

Your answer is incorrect.

8.18.3 (A)

The correct answer is: 28

Question **140**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

A single wall vent connector may pass through a floor or ceiling provided that

Select one:

☐

a.

A non-combustible insulation is used to prevent combustible surfaces from exceeding 194 °F (90 °C)

☒

b.

A single-wall vent connector is not permitted to pass through a floor or ceiling

☐

c.

It has a thimble four inches larger in diameter than the vent connector

☐

d.

It has a thimble six inches longer in diameter than the vent connector

### Feedback

Your answer is correct.

8.18.23

The correct answer is: A single-wall vent connector is not permitted to pass through a floor or ceiling

### Question 141

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

One purpose of a draft hood is to:

Select one:

a.

keep the flue cold

b.

Neutralize excess air

c.

Prevent back drafts in the common vent

d.

Allow for spillage

### Feedback

Your answer is correct.

The correct answer is: Allow for spillage

### Question **142**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Condensation in a venting system could be caused by

Select one:

a.

Under-firing of the appliance and/or the chimney is too small

b.

Over-firing of the appliance and/or the chimney is too large<

c.

Under-firing of the appliance and/or the chimney is too large

d.

Over-firing of the appliance and/or the chimney is too small

### Feedback

Your answer is incorrect.

The correct answer is: Under-firing of the appliance and/or the chimney is too large

### Question **143**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The maximum temperature for Type B-vent is approximately

Select one:

a.

2100 °F

b.

140 °F

c.

212 °F

d.

470 °F

### Feedback

Your answer is correct.

The correct answer is: 470 °F

### Question **144**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A recessed wall furnace is the only appliance that may use Type \_\_\_\_\_ vent.

Select one:

a.

B

b.

C

c.

A

d.

BW

### Feedback

Your answer is correct.

The correct answer is: BW

### Question **145**

Correct

Mark 1.00 out of 1.00

Mark 1.00 out of 1.00

Flag question

Question text

From the above drawing that doesn't comply with 8.2.1 a or b what should be the diameter of (D1) for appliance #1 using single wall connector?

Select one:

☐

a.

8 inches (20.32 cm)

☐

b.

6 inches (15.24 cm)

☐

c.

5 inches (12.7 cm)

☒

d.

7 inches (17.78 cm)

### Feedback

Your answer is correct.

The correct answer is: 7 inches (17.78 cm)

### Question **148**

Correct

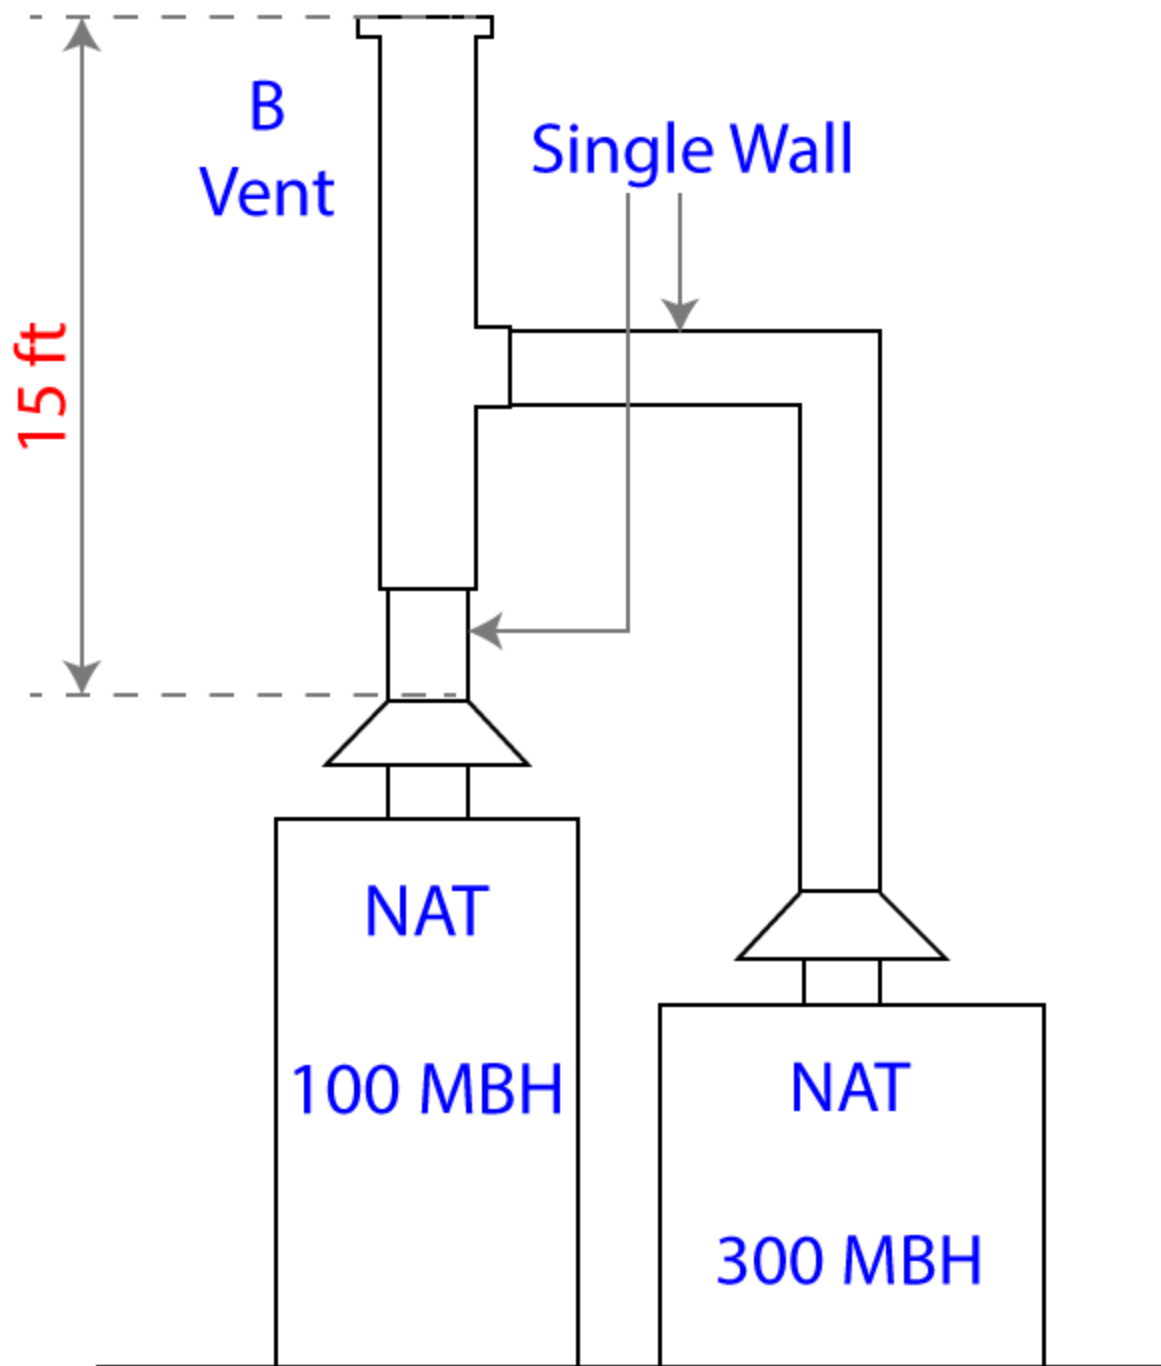

Mark 1.00 out of 1.00

Flag question

### Question text

In the drawing below that complies with 8.2.1 a or b, what is the diameter of the common vent ?

Select one:

a.

6 inches (15.24 cm)

b.

10 inches (223.86 cm)

c.

8 inches (20.32 cm)

d.

9 inches (25.40 cm)

### Feedback

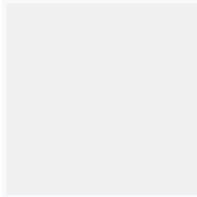

Your answer is correct.

The correct answer is: 10 inches (223.86 cm)

### Question **149**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Referring to the drawing below that doesn't comply with 8.2.1 a or b, the furnace single wall vent connector must be a minimum diameter of

Select one:

☐

a.

6 inches (15.24 cm)

☐

b.

5 inches (12.70 cm)

☐

c.

4 inches (10.16 cm)

☒

d.

7 inches (17.78 cm)

### Feedback

Your answer is incorrect.

The correct answer is: 6 inches (15.24 cm)

Question **150**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Referring to the drawing below, that doesn't comply with 8.2.1 a or b, what is the minimum diameter of D?

Select one:

a.

☐

b.

7 inches (17.78 cm)

☐

c.

5 inches (12.70 cm)

☒

d.

4 inches (10.16 cm)

### Feedback

Your answer is correct.

The correct answer is: 4 inches (10.16 cm)

### Question **151**

Incorrect

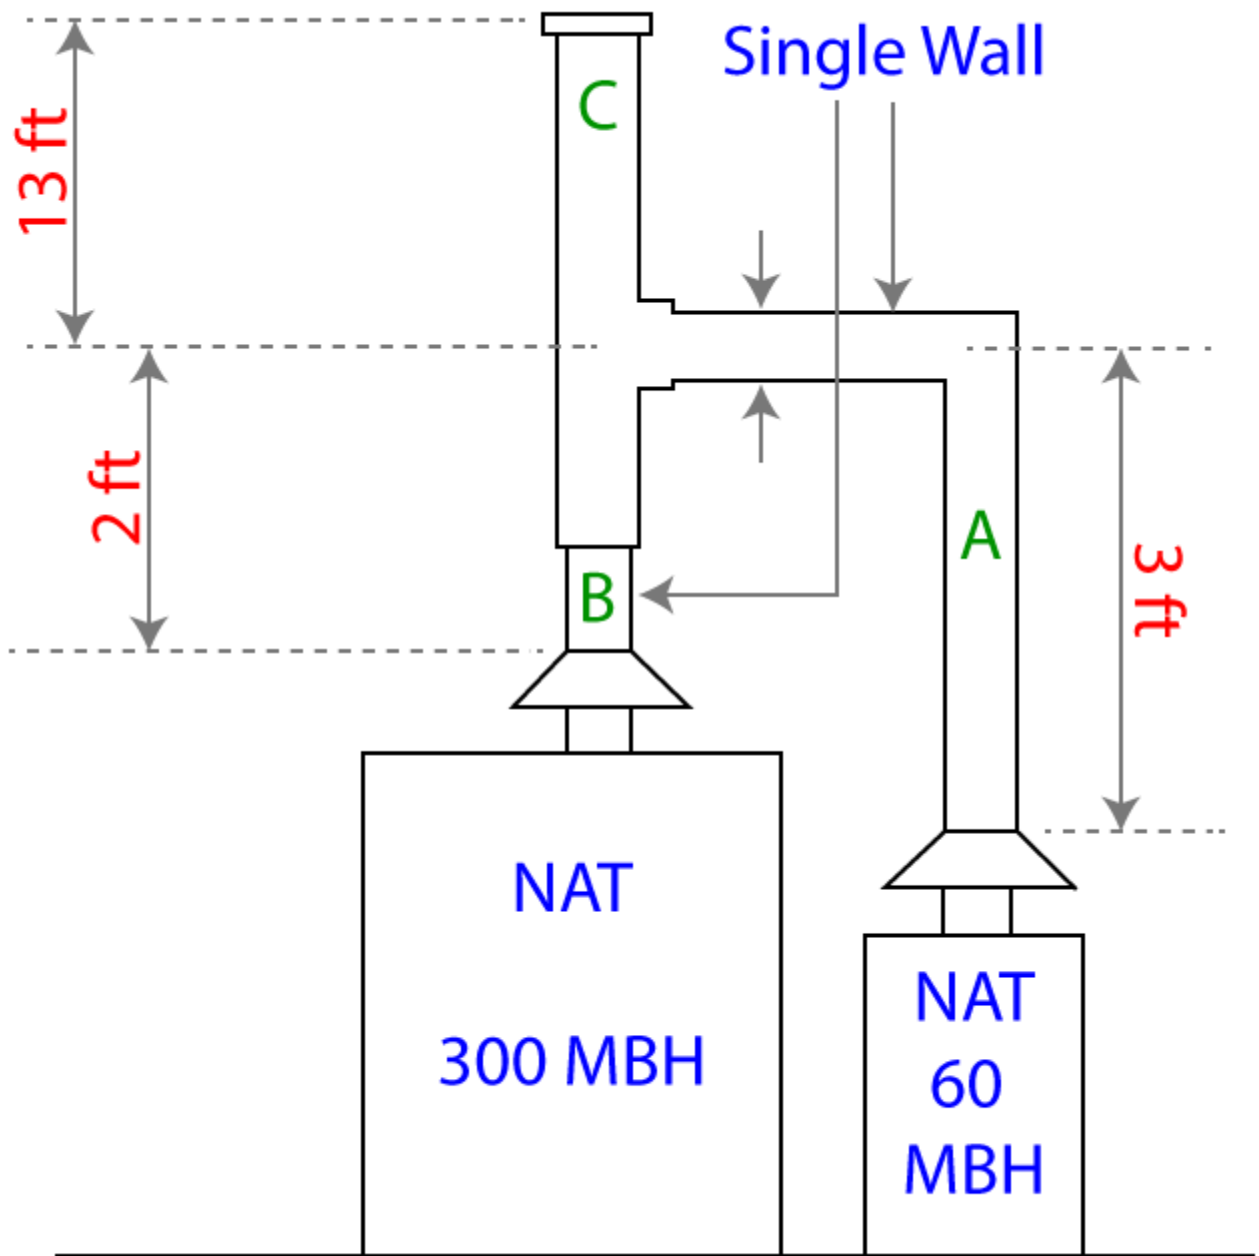

Mark 0.00 out of 1.00

Remove flag

### Question text

In the drawing below, that complies with 8.2.1 a or b calculate the diameter of B

Select one:

a.

9 inch (22.86 cm)

b.

8 inch (203.2 cm)

☐

c.

10 inch (25.40)

☐

d.

12 inch (30.48 cm)

### Feedback

Your answer is incorrect.

The correct answer is: 10 inch (25.40)

### Question **152**

Incorrect

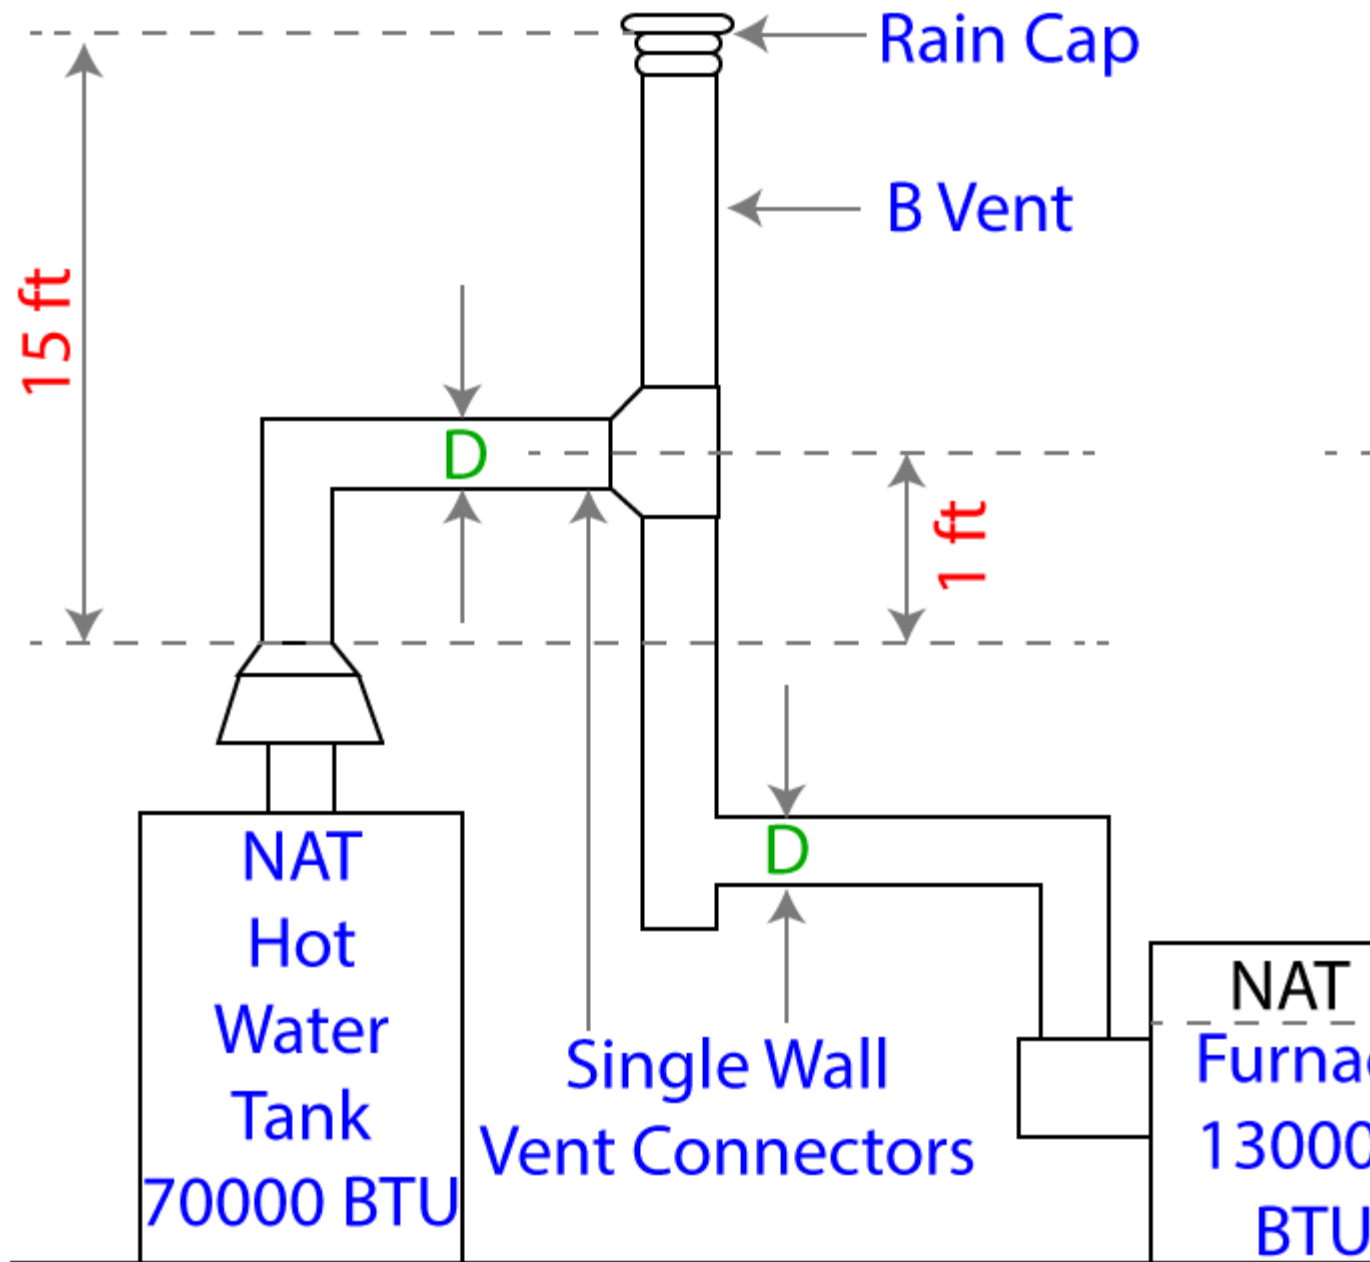

Mark 0.00 out of 1.00

Flag question

### Question text

Referring to the drawing below that complies with 8.2.1, a or b, the minimum diameter of the single wall vent connector on the hot water heater is how many inches ?

Select one:

a.

5 inches (15.24 cm)

b.

7 inches (17.78 cm)

☐

c.

8 inches (20.32 cm)

☐

d.

6 inches (12.70 cm)

### Feedback

Your answer is incorrect.

The correct answer is: 6 inches (12.70 cm)

### Question **153**

Not answered

Marked out of 1.00

Flag question

### Question text

In the above drawing (that doesn't comply with 8.2.1 a or b) what should the diameter of D1 for appliance #1 using a single wall vent connector be ?

Select one:

☐

a.

6 inches (15.24 cm)

☐

b.

5 inches (12.7 cm)

c.

7 inches (17.78 cm)

d.

8 inches (20.32 cm)

### Feedback

Your answer is incorrect.

The correct answer is: 7 inches (17.78 cm)

Question **154**

Not answered

Marked out of 1.00

Flag question

Question text

From the above drawing that complies with 8.2.1 a or b, using double wall vent connectors, what is the maximum allowable distance for L ?

Select one:

a.

108 inches (228.6 cm)

b.

6 feet (1.83 cm)

c.

9 inches (2.05 m)

d.

6 inches (15.24 cm)

### Feedback

Your answer is incorrect.

The riser on the left is only 1' as compared to the riser on the right being 2'. Therefore the least vent height used to determine your vent size is 14' not 15' which results in using the 10' row.

The correct answer is: 108 inches (228.6 cm)

### Question **155**

Not answered

The correct answer is: 10 PSIG (70 kPa)

### Question **187**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Calculate the input for the following natural gas appliance

- Calorific value of gas = 1000 Btu/cu.ft (10.35 kW/m<sup>3</sup> )
- Meter pressure = 7 inches w.c. (1.74 kPa)
- Manifold pressure = 5 inches w.c. (1.24 kPa)
- Local atmospheric pressure = 14.68 PSIA
- Test dial = 1 cu.ft

One revolution of the test dial takes 31.5 seconds. The clocked input is closest to which one of the following inputs ?

Select one:

☐

a.

116129 Btu/h (34.01 kW)

☐

b.

115428 Btu/h (33.81 kW)

c.

114285 Btu/h (33.47 kW)

d.

119999 Btu/h (35.15 kW)

### Feedback

Your answer is correct.

The correct answer is: 114285 Btu/h (33.47 kW)

1 = 24 volts , 2 = 24 volts

b.

1 = 24 volts , 2 = 0 volts

☐

c.

1 = 12 volts , 2 = 24 volts

☐

d.

1 = 0 volts , 2 = 0 volts

### Feedback

Your answer is correct.

The correct answer is: 1 = 24 volts , 2 = 0 volts

### Question **210**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A single thermocouples primary purpose is to

Select one:

☐

a.

Give 100 % safety

☐

b.

Supply power to the thermostat

☒

c.

Prove that the pilot is lit

d.

Supply milliwatts

### Feedback

Your answer is correct.

The correct answer is: Prove that the pilot is lit

### Question **211**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Referring to the above drawing what voltages would you expect to read at points 1 (PV - PV) and 2 (MV - MV) (the maximum voltage available is 24 volts) ?

Select one:

a.

1 = 24 volts , 2 = 0 volts

b.

1 = 12 volts , 2 = 24 volts

c.

1 = 0 volts , 2 = 0 volts

d.

1 = 24 volts , 2 = 24 volts

### Feedback

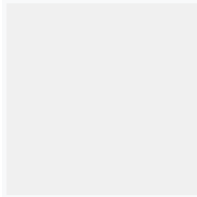

Your answer is correct.

The correct answer is: 1 = 0 volts , 2 = 0 volts

### Question **212**

Incorrect

Mark 0.00 out of 1.00

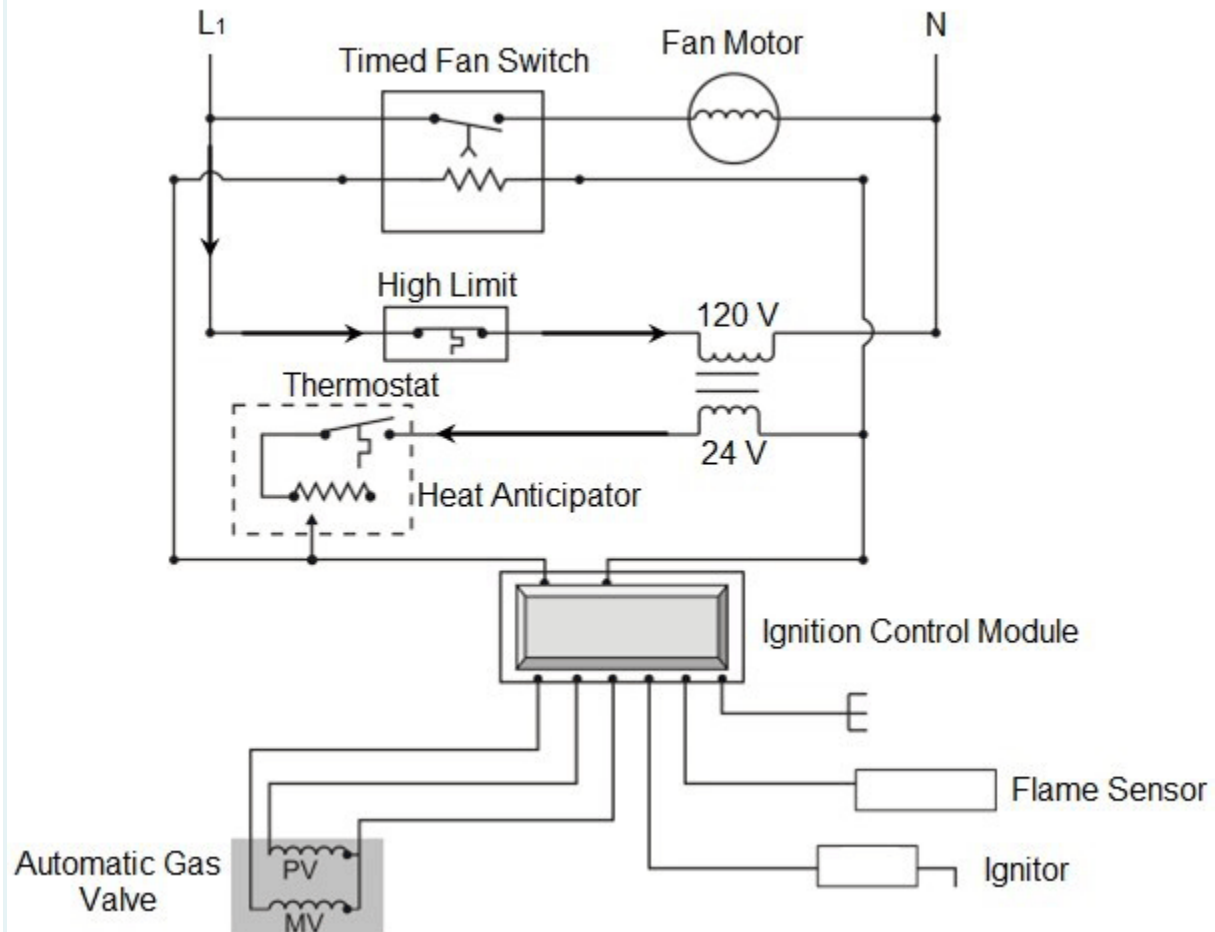

Flag question

### Question text

Referring to the image below , this is an example of which one of the following control systems ?

Select one:

☐

a.

A flame safe guard for standing pilots

☐

b.

An intermittent pilot ignition system

☐

c.

An direct hot surface ignition system

☒

d.

A direct spark ignition system

### Feedback

Your answer is incorrect.

The correct answer is: An intermittent pilot ignition system

### Question **213**

Incorrect

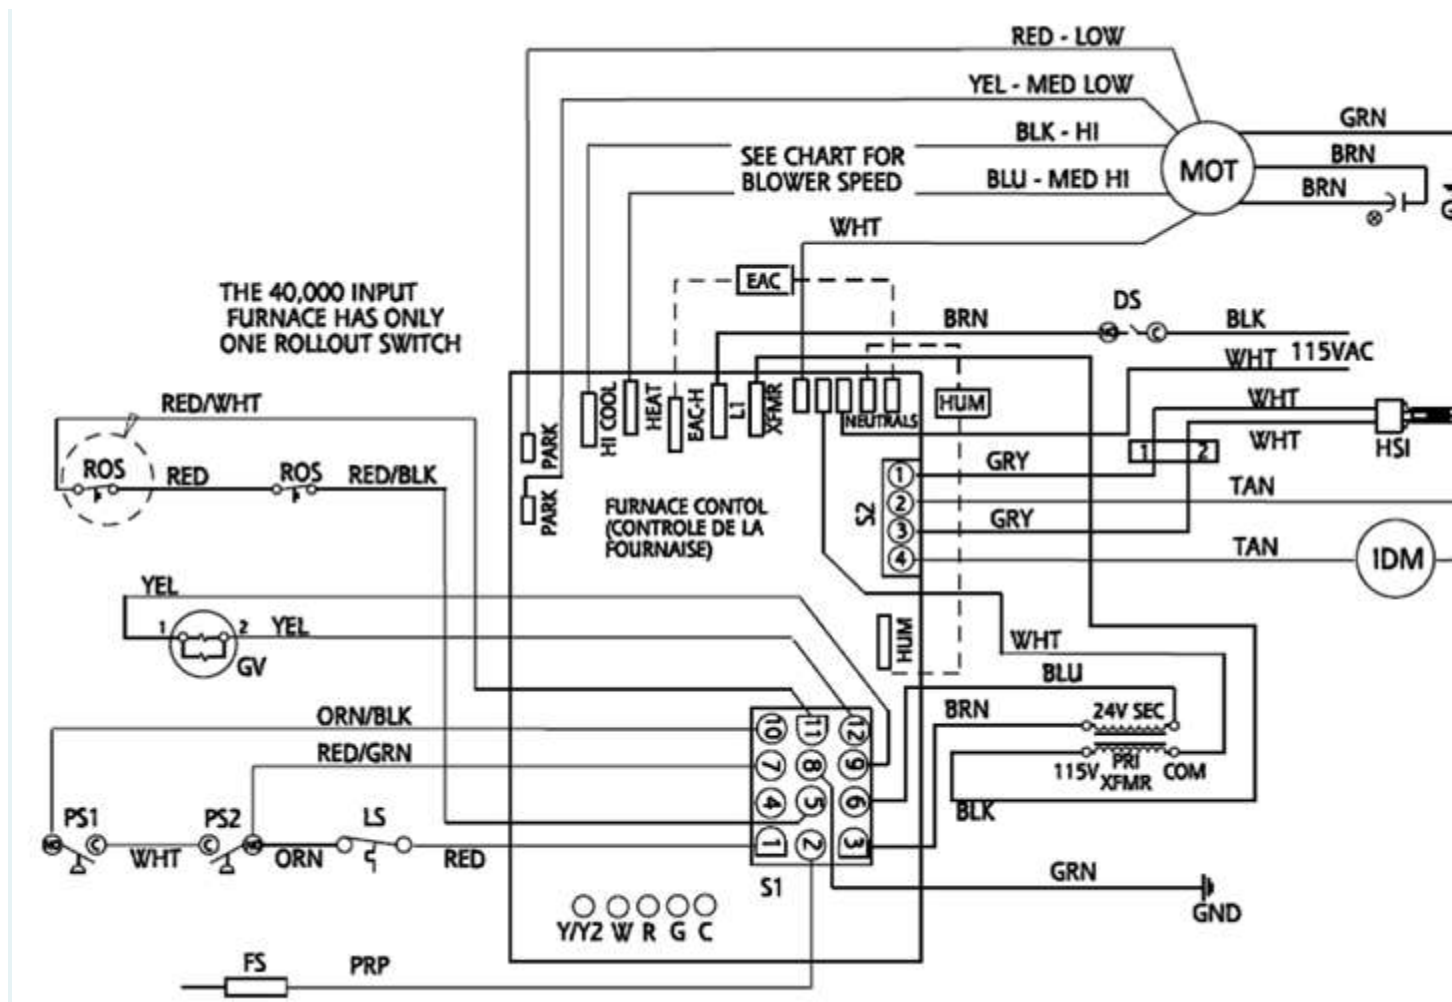

Mark 0.00 out of 1.00

Flag question

### Question text

Referring to the below diagram , the voltage supplied to the igniter is

Select one:

☐

a.

Millivolts as long as the unit is running

☒

b.

24 volts AC during the ignition cycle only

☐

c.

120 volts AC during the ignition cycle only

☐

d.

24 volts DC from the ignition module during the ignition cycle

### Feedback

Your answer is incorrect.

The correct answer is: 120 volts AC during the ignition cycle only

Question **214**

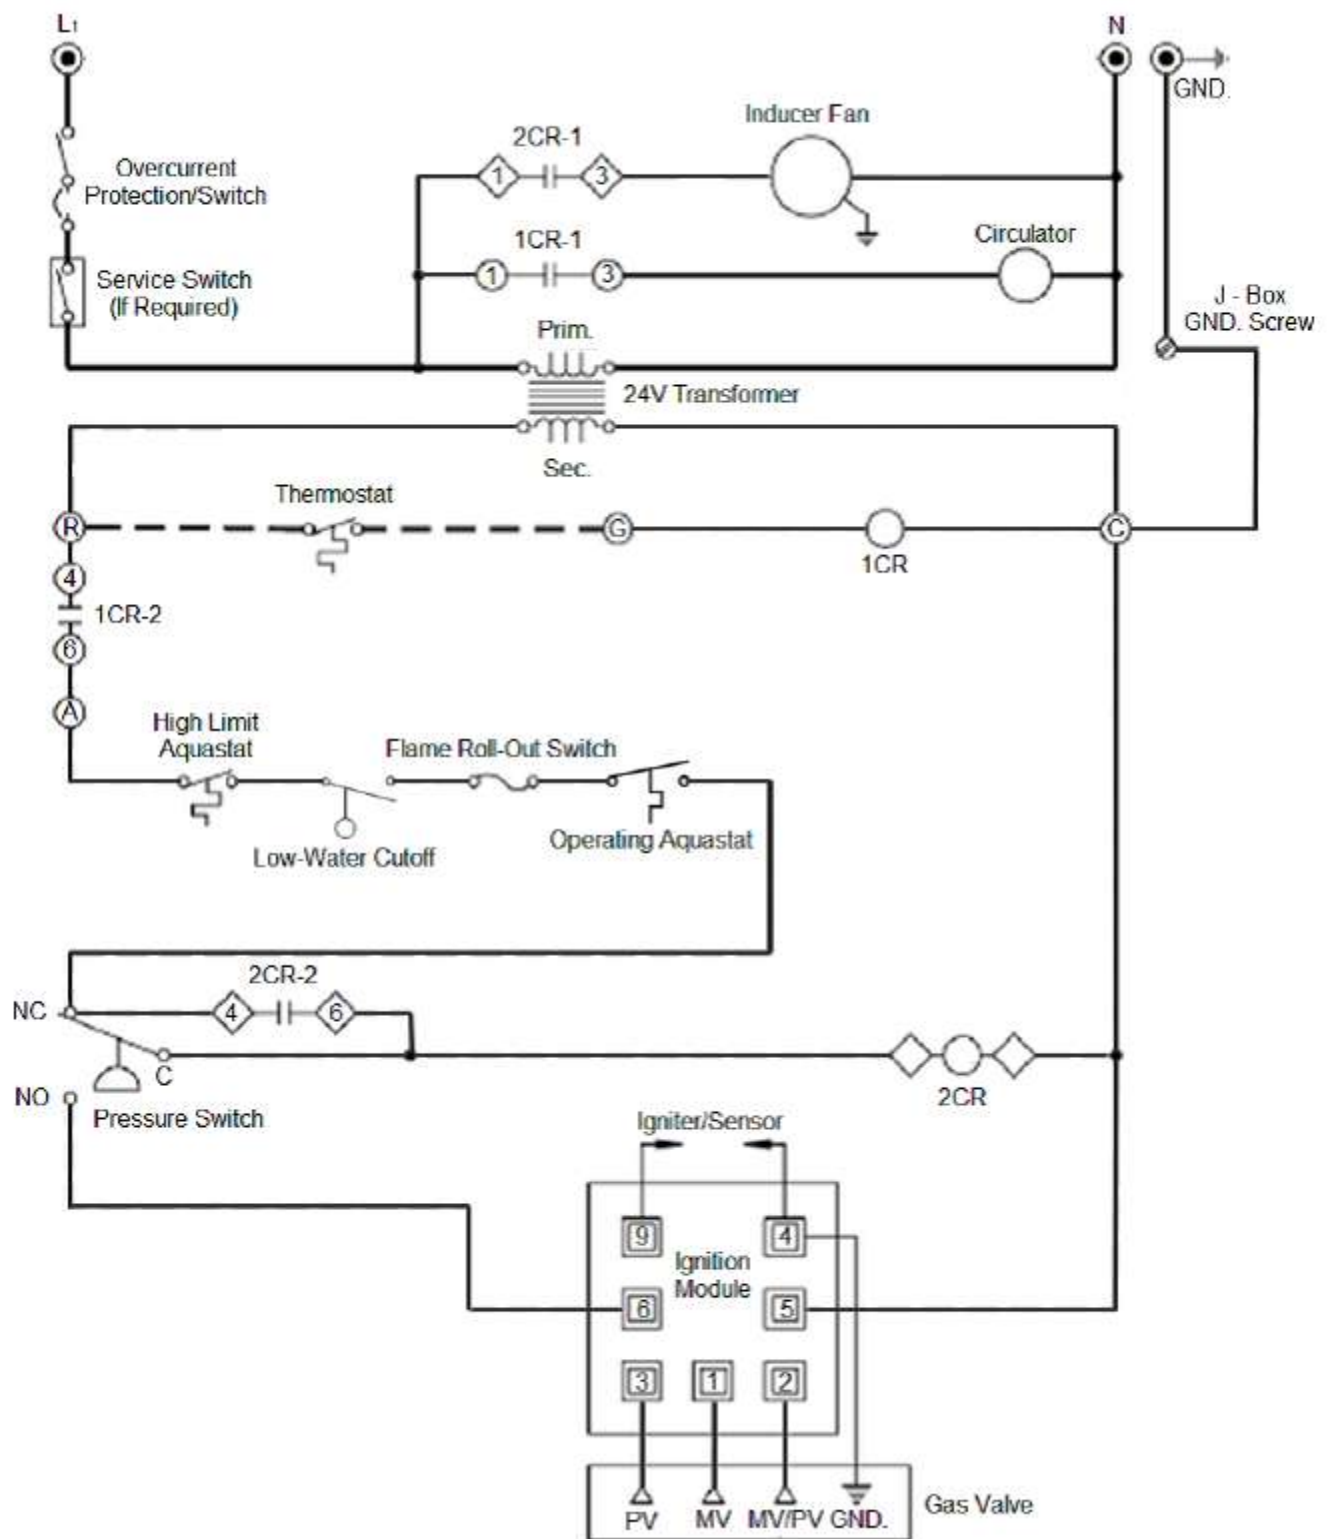

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Referring to the above drawing , which one of the following devices will energize the ignition module?

Select one:

a.

The thermostat pressure switch

b.

The combustion blower limit switch

c.

The combustion blower pressure switch

d.

The low water cut-off switch

### Feedback

Your answer is incorrect.

The correct answer is: The combustion blower pressure switch

Question **215**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Referring to the drawing above which of the following sequences of operation will occur after the 2CR coil is energized ?

Select one:

a.

Inducer fan is energized which changes the position of the pressure switch

☐

b.

Thermostat opens which ends heating cycle

☐

c.

Pressure switch changes position which energizes the inducer fan

☐

d.

Control board is energized which activates the inducer fan

### Feedback

Your answer is correct.

The correct answer is: Inducer fan is energized which changes the position of the pressure switch

### Question **216**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

If the voltage is kept constant and the resistance is raised the amperage will :

Select one:

☐

a.

Increase

☐

b.

Remain constant

c.

Fluctuate constantly

d.

Decrease

### Feedback

Your answer is correct.

The correct answer is: Decrease

### Question **217**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

One thousand millivolts equals which one of the following voltages ?

Select one:

a.

10 volts

b.

1000 volts

c.

100 volts

d.

One volt

### Feedback

Your answer is incorrect.

The correct answer is: One volt

### Question **218**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

The term continuity testing means :

Select one:

a.

Testing cut-in and cut-out times for automatic controls

b.

Checking operating of a warm air heating system for continuous comfort conditions

c.

Checking operating time of appliances

d.

Proving a continuous conducting path in an electrical circuit

### Feedback

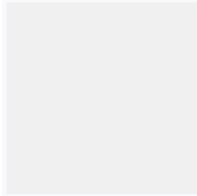

Your answer is correct.

The correct answer is: Providing a continuous conducting path in an electrical circuit

Question **219**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

The measurement of resistance to the flow of electricity is measured in

Select one:

☐

a.

Ohms

☐

b.

Watts

☐

c.

Volts

☒

d.

Amperes

Feedback

Your answer is incorrect.

The correct answer is: Ohms

Question **220**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Two common types of electrical current are :

Select one:

a.

Direct and alternating

b.

Single phase and poly phase

c.

Alternating and poly phase

d.

Direct and single phase

### Feedback

Your answer is correct.

The correct answer is: Direct and alternating

Question **221**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Most control transformers used in heating and air conditioning appliances reduce the primary voltage supply to

Select one:

☐

a.

3 volts

☒

b.

6 volts

☐

c.

12 volts

☐

d.

24 volts

### Feedback

Your answer is incorrect.

The correct answer is: 24 volts

### Question **222**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A blown fuse may indicate that

Select one:

☐

a.

The neutral conductor is connected to the grounding conductor

☐

b.

The conductors are larger than required

☐

c.

The wire is loose from a connection

☒

d.

There is a short in the wiring

### Feedback

Your answer is correct.

The correct answer is: There is a short in the wiring

Question **223**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

An anticipator on a room thermostat is designed to :

Select one:

☐

a.

Compensate for variations in room temperature

☐

b.

Compensate for variations in voltage

c.

Narrow the range of operating temperatures

d.

Give more sensitive and even temperature control and narrow the differential

### Feedback

Your answer is correct.

The correct answer is: Give more sensitive and even temperature control and narrow the differential

Question **224**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

To determine the correct heat anticipator setting on a 24 volt thermostat one must

Select one:

a.

Multiply the voltage of the thermostat by the amperage

b.

Determine the setting from the amperage rating indicated on the gas valve or control module or included in the certified manufacturer's installation instructions

c.

Find it by trail and error

d.

Ask an electrician

### Feedback

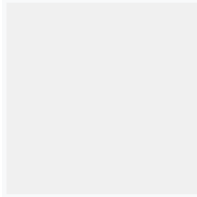

Your answer is correct.

The correct answer is: Determine the setting from the amperage rating indicated on the gas valve or control module or included in the certified manufacturer's installation instructions

### Question **225**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Regulations require 2 pressure switches to be installed on steam boilers. One as an operating control and the other as a high pressure limit. These controls are wired in a :

Select one:

a.

Series control valve circuit in parallel with one another

b.

Parallel control valve circuit in parallel with one another

c.

Series control valve circuit in series with one another

d.

Parallel control valve circuit in series with one another

### Feedback

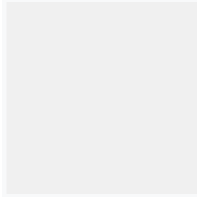

Your answer is incorrect.

The correct answer is: Series control valve circuit in series with one another

### Question **226**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Referring to the drawing below , if this transformer is in phase , the voltage readings across L1 and R will be

Select one:

☐

a.

120 volts AC

☐

b.

24 volts AC

☐

c.

144 volts AC

d.

96 volts AC

### Feedback

Your answer is correct.

The correct answer is: 96 volts AC

### Question **227**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Referring to the diagram above , this electrical symbol represents which one of the following electrical components ?

Select one:

a.

A variable resistor

b.

An adjustable pressure switch

☐

c.

Electrical contacts

☒

d.

A centrifugal switch

### Feedback

Your answer is incorrect.

The correct answer is: Electrical contacts

Question **228**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Use this link for the next 3 questions.

C - Thermostat

B - High  
Limit

A - Pilot  
Generator

Determine the expected minimum voltage reading at point A

Select one:

☐

a.

140 mV

☒

b.

260 mV

☐

c.

80 mV

☐

d.

100 mV

### Feedback

Your answer is correct.

The correct answer is: 260 mV

Question **229**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Determine the expected maximum voltage reading at Point B

Select one:

☒

a.

10 mV

☐

b.

5 mV

☐

c.

2 mV

☐

d.

110 mV

### Feedback

Your answer is correct.

The correct answer is: 10 mV

Question **230**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Determine the expected maximum voltage reading at Point C. The device has a heat anticipator.

Select one:

☐

a.

260 mV

☐

b.

30 mV

☒

c.

10 mV

☐

d.

110 mV

### Feedback

Your answer is incorrect.

The correct answer is: 110 mV

Question **231**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the expected closed circuit reading when testing a thermocouple ?

Select one:

☐

a.

2 mV

☐

b.

30 mV

☐

c.

5 mV

d.

15 mV

### Feedback

Your answer is correct.

The correct answer is: 15 mV

### Question **232**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

During a drop out test , the reading on the multi-meter drops to zero millivolts and the electromagnet has not released. What would be the problem ?

Select one:

a.

Broken spring in the safety shut off valve

b.

The electromagnet has an alternate source of power and can not open

c.

There is no problem - this is acceptable

d.

The safety shut off valve is using a 24 volt transformer

### Feedback

Your answer is incorrect.

The correct answer is: Broken spring in the safety shut off valve

### Question 233

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

How much of the thermocouple is to be enveloped by the pilot flame ?

Select one:

a.

3/8 to 1/2 inch of the thermocouple cold junction

b.

As much of the thermocouple as possible

c.

3/8 to 1/2 inch of the thermocouple hot junction

d.

1/2 to 3/4 inch of the thermocouple base

### Feedback

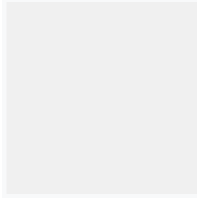

Your answer is correct.

The correct answer is: 3/8 to 1/2 inch of the thermocouple hot junction

### Question 234

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What is the maximum flame failure response time for a thermocouple ?

Select one:

☐

a.

120 seconds

☐

b.

60 seconds

☐

c.

30 seconds

☒

d.

90 seconds

### Feedback

Your answer is correct.

The correct answer is: 90 seconds

Question **235**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

What is the expected voltage reading from points L1 to C ?

Select one:

☐

a.

144 V

☒

b.

0 V

☐

c.

120 V

☐

d.

96 V

### Feedback

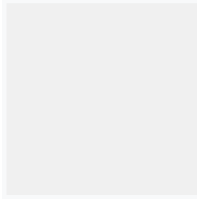

Your answer is incorrect.

The correct answer is: 120 V

### Question **236**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

What if anything, is required to phase the transformer?

Select one:

a.

Reverse L1 and L2

b.

Nothing required , it is in phase

c.

Reverse R and C

d.

Either (a) or (b)

### Feedback

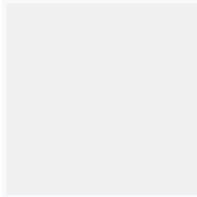

Your answer is correct.

The correct answer is: Nothing required , it is in phase

### Question **237**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Flame rods use the principle of

Select one:

a.

UV radiation and an amplified current

b.

All the options are correct

c.

flame ionization and a rectified current

☐

d.

Quenching and an amplified current

### Feedback

Your answer is correct.

The correct answer is: flame ionization and a rectified current

Question **238**

Not answered

Marked out of 1.00

Flag question

### Question text

What is the most common flame safeguard found on residential appliances with electronic ignition systems ?

Select one:

☐

a.

Flame rod

☐

b.

Thermocouple

☐

c.

Ultraviolet detector

☐

d.

Infrared detector

### Feedback

Your answer is incorrect.

The correct answer is: Flame rod

Question **239**

Not answered

Marked out of 1.00

Flag question

### Question text

A flame rod requires a minimum effective grounding area of

Select one:

a.

4 : 1

b.

15 : 1

c.

20 : 1

d.

1 : 1

### Feedback

Your answer is incorrect.

The correct answer is: 4 : 1

Question **240**

Not answered

Marked out of 1.00

Flag question

Question text

If the length of a conductor (wire) is increased the resistance will

Select one:

☐

a.

Decrease

☐

b.

Remain constant

☐

c.

Fluctuate constantly

☐

d.

Increase

Feedback

Your answer is incorrect.

The correct answer is: Increase

Question **241**

Not answered

Marked out of 1.00

Flag question

### Question text

Automatic gas control circuits are never designed , rated or operated by

Select one:

☐

a.

Millivoltage using thermocouples

☐

b.

120 V

☐

c.

Millivoltage using thermopiles

☐

d.

24 V

### Feedback

Your answer is incorrect.

The correct answer is: Millivoltage using thermocouples

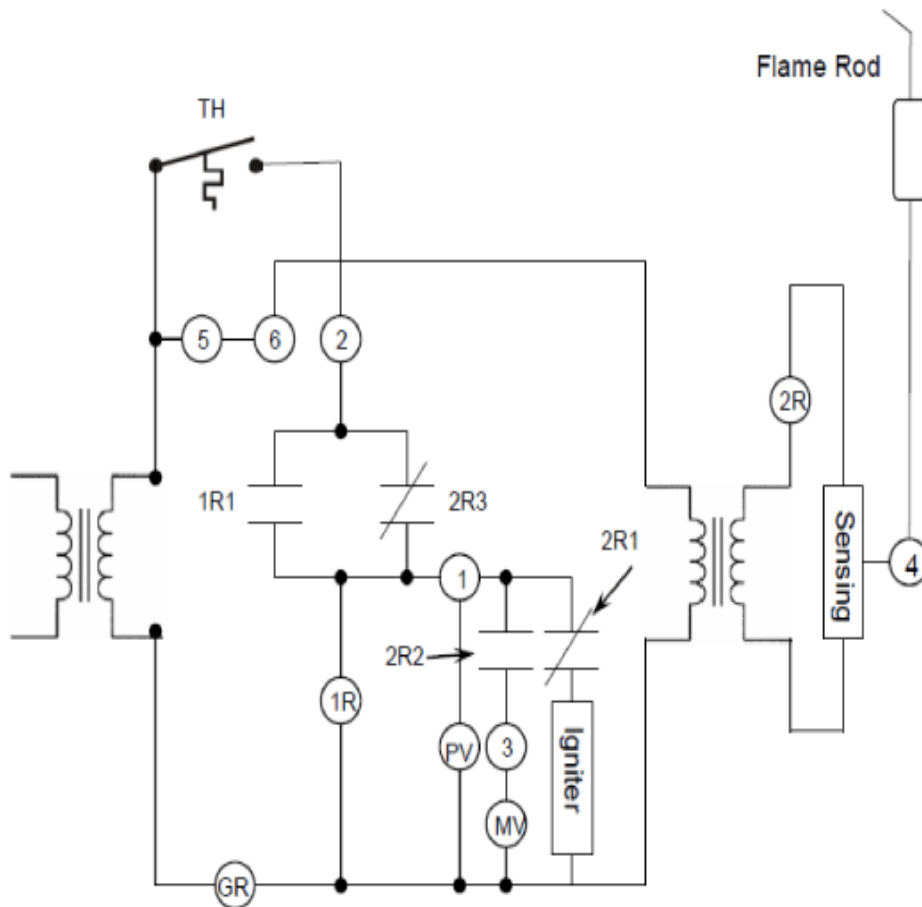

Question **242**

Not answered

Marked out of 1.00

Flag question

Question text

Referring to the drawing illustrated above the sensing circuit is

Select one:

☐

a.

Never monitored

☐

b.

Continuously monitored

☐

c.

Totally independent of the rest of the circuit

d.

Occasionally monitored

### Feedback

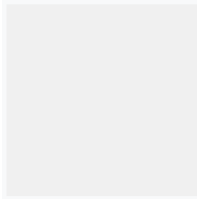

Your answer is incorrect.

The correct answer is: Continuously monitored

Question **243**

Not answered

Marked out of 1.00

Flag question

Question text

Referring to the drawing illustrated above, the flame safeguard is a/an  
Select one:

☐

a.

Flame rod

☐

b.

Thermocouple and pilot assembly

☐

c.

Optical flame safeguard

d.

Pilot generator

### Feedback

Your answer is incorrect.

The correct answer is: Flame rod

Question **244**

Not answered

Marked out of 1.00

Flag question

Question text

Referring to the drawing above the electrical circuits incorporate a/an  
Select one:

☐

a.  
Continuous pilot

☐

b.  
Intermittent pilot

☐

c.  
Interrupted pilot

d.

Expanding pilot

### Feedback

Your answer is incorrect.

The correct answer is: Intermittent pilot

Question **245**

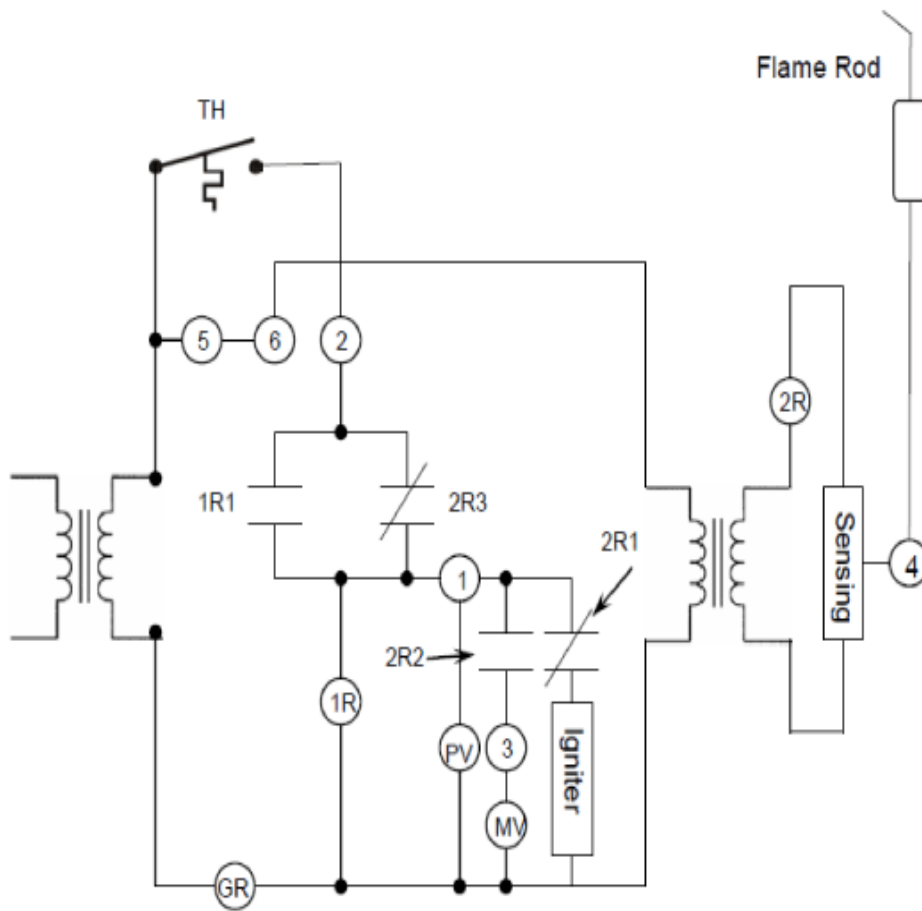

Not answered

Marked out of 1.00

Flag question

Question text

Referring to the drawing above, when relay coil 2R is energized. What happens next?

Select one:

☐

a.

2R1 opens and stops ignition

☐

b.

2R3 opens but power continues to flow to relay coil 1R through a closed 1R1

☐

c.

All of the options are correct

d.

2R2 closes and opens the main gas valve

### Feedback

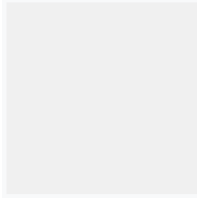

Your answer is incorrect.

The correct answer is: All of the options are correct

Question **246**

Not answered

Marked out of 1.00

Flag question

Question text

Select one:

a.

C.

The main gas valve will remain open during re-ignition

d.

The pilot valve will re-open for ignition

### Feedback

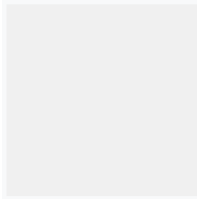

Your answer is incorrect.

The correct answer is: Relays 2R1 , 2R2 and 2R3 will reverse position

### Question **247**

Not answered

Marked out of 1.00

Flag question

### Question text

Calculate the voltage drop across Point A in the drawing illustrated.

Select one:

a.

120 mv

b.

240 mv

☐

c.

60 mv

☐

d.

0 mv

### Feedback

Your answer is incorrect.

The correct answer is: 60 mv

Question **248**

Not answered

Marked out of 1.00

Flag question

### Question text

Which of the following is normally open ?

Select one:

☐

a.

A solenoid valve

☐

b.

Auto-fan switch

☐

c.

High limit switch

d.

Flame roll-out switch

### Feedback

Your answer is incorrect.

The correct answer is: Auto-fan switch

Question **249**

Not answered

Marked out of 1.00

Flag question

### Question text

On a furnace the thermostat is wired in \_\_\_\_\_ with the automatic gas valve.

Select one:

a.

Series

b.

Series / parallel

c.

Parallel

d.

Series & Parallel is acceptable

### Feedback

Your answer is incorrect.

The correct answer is: Series

Question **250**

Not answered

Marked out of 1.00

Flag question

Question text

If the end switch on the automatic dampers of a D F M A unit failed to close what would happen next ?

Select one:

☐

a.

Main valve would open to low-fire

☐

b.

Nothing would happen

☐

c.

Ignition sequence would initiate

☐

d.

Blower motor would be powered

Feedback

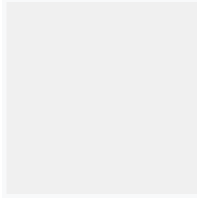

Your answer is incorrect.

The correct answer is: Nothing would happen

Question **251**

Not answered

Marked out of 1.00

Flag question

### Question text

Furnace fan control contacts open when circulating air

Select one:

☐

a.

Starts flowing

☐

b.

Warms up

☐

c.

Stops flowing

☐

d.

Cools down

### Feedback

Your answer is incorrect.

The correct answer is: Cools down

Question **252**

Not answered

Marked out of 1.00

Flag question

Question text

To check the high limit on a furnace for proper operation a gas fitter could

Select one:

☐

a.

Turn down the thermostat and call for heat

☐

b.

Disable the fan and call for heat

☐

c.

Jump out the limit switch

☐

d.

Turn down the operating limit and cycle on the furnace

Feedback

Your answer is incorrect.

The correct answer is: Disable the fan and call for heat

Question **253**

Not answered

Marked out of 1.00

Flag question

Question text

When installing a new thermostat the gas fitter would check the

Select one:

☐

a.

Amperage designation on the thermostat and match it to the rating of the gas valve

☐

b.

Voltage designation on the thermostat

☐

c.

Proper location of the thermostat to ensure that it is monitoring the ambient house temperature

☐

d.

All the options are correct

### Feedback

Your answer is incorrect.

The correct answer is: All the options are correct

Question **254**

Not answered

Marked out of 1.00

Flag question

### Question text

The maximum temperature rating of a flame rod is

Select one:

☐

a.

2600 °F

☐

b.

1200 ° F

☐

c.

470 ° F

☐

d.

1000 ° F

### Feedback

Your answer is incorrect.

The correct answer is: 2600 °F

Question **255**

Not answered

Marked out of 1.00

Flag question

### Question text

When checking a circuit for continuity you would have your multi-meter set for

Select one:

☐

a.

Amps

☐

b.

Watts

☐

c.

Volts

d.

Ohms

### Feedback

Your answer is incorrect.

The correct answer is: Ohms

Question **256**

Not answered

Marked out of 1.00

Flag question

### Question text

Referring to the diagram above , this electrical symbol represents which one of the following electrical components?

Select one:

a.

A junction plug

☐

b.

A variable resistor

☐

c.

An adjustable capacitor

☐

d.

A tapped transformer

### Feedback

Your answer is incorrect.

The correct answer is: A variable resistor

Question **257**

Not answered

Marked out of 1.00

Flag question

### Question text

The principle of adding cathodic protection to an underground piping system is to allow what to corrode ?

Select one:

☐

a.

All the options are correct

☐

b.

The anode

☐

c.

The cathode

☐

d.

The electrolyte

### Feedback

Your answer is incorrect.

The correct answer is: The anode

Question **258**

Not answered

Marked out of 1.00

Flag question

### Question text

What type of plastic pipe is allowed to be used for underground gas piping ?

Select one:

☐

a.

PVC

☐

b.

ABS

☐

c.

CPVC

d.

PE

### Feedback

Your answer is incorrect.

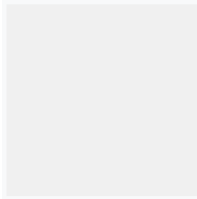

6.2.13 (CSA 137.4)

The correct answer is: PE

Question **259**

Not answered

Marked out of 1.00

Flag question

### Question text

The diameter of a drip pocket serving a four inch NPS gas pipe shall be

Select one:

a.

Three inches NPS in diameter

b.

Four inches NPS in diameter

c.

Not more than three inches NPS in diameter

d.

Equal to the diameter of the pipe it serves but not greater than two inches NPS in diameter which ever is less

### Feedback

Your answer is incorrect.

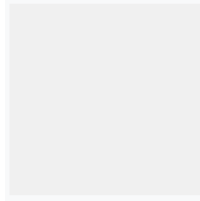

6.13.2 (b)

The correct answer is: Equal to the diameter of the pipe it serves but not greater than two inches NPS in diameter which ever is less

### Question **260**

Not answered

Marked out of 1.00

Flag question

### Question text

A propane fired system operating at 11 inches w.c (2.74 kPa) is limited to a maximum pressure drop of

Select one:

☐

a.

5.5 inches w.c (1.368 kPa)

☐

b.

10 % of the initial load

☐

c.

0.5 inches w.c (125 Pa)

☐

d.

1 inch w.c (250 Pa)

## Feedback

Your answer is incorrect.

The correct answer is: 1 inch w.c (250 Pa)

## Question 261

Not answered

Marked out of 1.00

Flag question

## Question text

The above drawing illustrated is of a propane

Select one:

a.

Liquid withdrawal valve for a forklift

b.

Valve with overfill protection device

c.

Evacuation valve for large tanks

d.

Cylinder liquid withdrawal valve

### Feedback

Your answer is incorrect.

The correct answer is: Valve with overfill protection device

### Question **262**

Not answered

Marked out of 1.00

Flag question

### Question text

When a piping or tubing system is to be purged to the outdoors the purging lines shall not terminate closer than how many feet from an air intake ?

Select one:

☐

a.

10 feet (7.6 m)

☐

b.

3 feet (0.9 m)

☐

c.

25 feet (3 m)

☐

d.

5 feet (1.5 m)

### Feedback

Your answer is incorrect.

6.23.7

The correct answer is: 25 feet (3 m)

Question **263**

Not answered

Marked out of 1.00

Flag question

Question text

The maximum allowable pressure drop (per B149.1 code) in a low pressure propane domestic piping system is

Select one:

☐

a.

0.5 inches w.c (125 Pa)

☐

b.

10 % of initial inlet pressure

☐

c.

5 inches w.c (1.25 kPa)

☐

d.

1 inch w.c (250 Pa)

Feedback

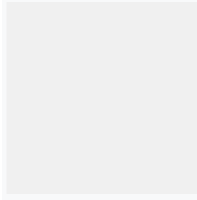

Your answer is incorrect.

The correct answer is: 1 inch w.c (250 Pa)

Question **264**

Not answered

Marked out of 1.00

Flag question

### Question text

The unthreaded portion of a gas line shall extend at least how far, through a floor ?

Select one:

☐

a.

Two inches

☐

b.

One pipe diameter

☐

c.

Two pipe diameters

☐

d.

One inch

### Feedback

Your answer is incorrect.

6.12.2

The correct answer is: Two inches

Question **265**

Not answered

Marked out of 1.00

Flag question

### Question text

Copper tubing gas system in residential installations must be identified at what intervals ?

Select one:

☐

a.

10 feet (3.0 m)

☐

b.

4 feet (1.22 m)

☐

c.

6 feet (1.83 m)

☐

d.

20 feet (6.0 m)

### Feedback

Your answer is incorrect.

6.17.3

The correct answer is: 6 feet (1.83 m)

Question **266**

Not answered

Marked out of 1.00

Flag question

Question text

A 150 foot (45.7 m) length of 2 inch NPS gas piping operating at a pressure of 2 PSIG (14 kPa) shall be tested at

Select one:

☐

a.

15 PSIG (100 kPa) for 1 hour

☐

b.

50 PSIG (340kPa) for 1 minutes

☐

c.

15 PSIG (100 kPa) for 15 minutes

☐

d.

50 PSIG (340kPa) for 15 minutes

Feedback

Your answer is incorrect.

Table 6.3

The correct answer is: 15 PSIG (100 kPa) for 15 minutes

Question **267**

Not answered

Marked out of 1.00

Flag question

Question text

Fittings and accessories placed on propane tanks must be rated for at least

Select one:

a.

400 PSIG or 125 WOG (2758 kPa)

b.

125 PSIG or 250 WOG (863 kPa)

c.

125 PSIG or 400 WOG (863 kPa)

d.

250 PSIG or 400 WOG (1,725 kPa)

### Feedback

Your answer is incorrect.

The correct answer is: 250 PSIG or 400 WOG (1,725 kPa)

### Question 268

Not answered

Marked out of 1.00

Flag question

### Question text

A corrugated metal connector may be used to connect a suspended appliance providing its length does not exceed

Select one:

a.

1 foot (0.3 m)

☐

b.

4 feet (1.2 m)

☐

c.

2 feet (0.6 m)

☐

d.

6 feet (1.8 m)

### Feedback

Your answer is incorrect.

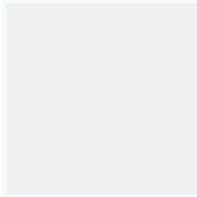

6.21.3 (b)

The correct answer is: 2 feet (0.6 m)

### Question 269

Not answered

Marked out of 1.00

Flag question

### Question text

Piping used to convey propane in the vapor phase may be schedule 40 with threaded joints if the vapor pressure does not exceed

Select one:

☐

a.

60 PSIG (413 kPa)

☐

b.

125 PSIG (862 kPa)

☐

c.

11 inches w.c (2.74 kPa)

☐

d.

5 PSIG (34 kPa)

### Feedback

Your answer is incorrect.

6.2.3

The correct answer is: 125 PSIG (862 kPa)

Question **270**

Not answered

Marked out of 1.00

Flag question

### Question text

In order to detect flaws or pinholes in the pipes exterior coating, what kind of test is performed ?

Select one:

☐

a.

Visual

☐

b.

Jeep

☐

c.

Hole

☐

d.

Ultrasonic

### Feedback

Your answer is incorrect.

The correct answer is: Jeep

Question **271**

Not answered

Marked out of 1.00

Flag question

### Question text

A corrugated metal connector used to connect a range shall not exceed

Select one:

☐

a.

3 feet (0.9 m)

☐

b.

4 feet (1.2 m)

☐

c.

6 feet (1.8 m)

☐

d.

2 feet (0.6 m)

### Feedback

Your answer is incorrect.

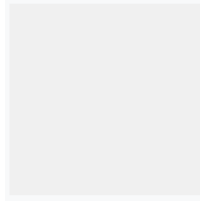

6.21.3

The correct answer is: 6 feet (1.8 m)

Question **272**

Not answered

Marked out of 1.00

Flag question

### Question text

When a gas line passes from one building to another building , it is necessary to have a gas valve at

Select one:

☐

a.

The point where the branch connects to the main line

☐

b.

The point of entry to the second building

☐

c.

The point of exit from the first building

☐

d.

Both the exit from the first building and the entry of the second building

### Feedback

Your answer is incorrect.

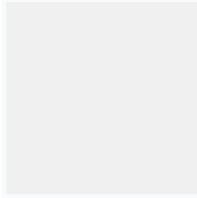

6.18.8

The correct answer is: Both the exit from the first building and the entry of the second building

Question **273**

Not answered

Marked out of 1.00

Flag question

Question text

A metal used for a sacrificial anode is :

Select one:

☐

a.

Magnesium

☐

b.

Brass

☐

c.

Manganese

☐

d.

Steel

Feedback

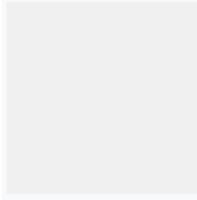

Your answer is incorrect.

The correct answer is: Magnesium

Question **274**

Not answered

Marked out of 1.00

Flag question

### Question text

The minimum diameter of steel pipe which must be welded is

Select one:

☐

a.

2 inches NPS

☐

b.

2 1/2 inches NPS

☐

c.

3 inches NPS

☐

d.

4 inches NPS

### Feedback

Your answer is incorrect.

6.9.2

The correct answer is: 2 1/2 inches NPS

Question **275**

Not answered

Marked out of 1.00

Flag question

Question text

The difference in pressure from the inlet gas pressure and the outlet gas pressure of a piping system is known as

Select one:

☐

a.

Pressure drop

☐

b.

Manifold pressure

☐

c.

Static pressure

☐

d.

Friction loss

Feedback

Your answer is incorrect.

The correct answer is: Pressure drop

Question **276**

Not answered

Marked out of 1.00

Flag question

### Question text

The maximum allowable pressure drop (according to the B149.1 code) on a gas piping system with an operating pressure of 7 to 14 inches w.c (1.75 - 3.5 kPa) shall not exceed

Select one:

☐

a.

1 inch w.c (250 kPa)

☐

b.

5 1/2 inches w.c (1.37 kPa)

☐

c.

1/2 inches w.c (125 kPa)

☐

d.

10% of initial inlet pressure

### Feedback

Your answer is incorrect.

### Table A.2

The correct answer is: 1 inch w.c (250 kPa)

### Question **277**

Not answered

Marked out of 1.00

Flag question

### Question text

The unthreaded portion of a gas line shall extend at least how far through a wall ?

Select one:

a.

One inch (25 mm)

b.

Two inches (50 mm)

c.

One pipe diameter

d.

Two pipe diameters

### Feedback

Your answer is incorrect.

6.12.2

The correct answer is: One inch (25 mm)

Question **278**

Not answered

Marked out of 1.00

Flag question

### Question text

In what direction does the current flow in a cathodically protected piping system ?

Select one:

a.

From the anode to the cathode and cathode to the anode because the system is producing AC current

b.

Neither the anode to the cathode and cathode to the anode because by adding cathodic protection , current flow is completely stopped

c.

From the cathode to the anode

d.

From the anode to the cathode

#### Feedback

Your answer is incorrect.

The correct answer is: From the anode to the cathode

Question **279**

Not answered

Marked out of 1.00

Flag question

Question text

Group 1

Group 2

When flared copper tubing is used in a piping system which of the above group of fittings should be used ?

Select one:

☐

a.

Group 2 may be used on propane systems only

☐

b.

Group 1 should be used at all times

☐

c.

Either Group 1 or 2 may be used if permitted by the inspector

☐

d.

Group 2 may be used for low pressure systems only

### Feedback

Your answer is incorrect.

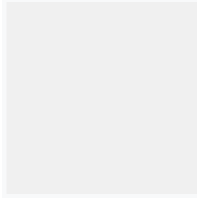

6.2.5

The correct answer is: Group 1 should be used at all times

Question **280**

Not answered

Marked out of 1.00

Flag question

### Question text

A 1/2 inch NPS gas line must be supported at least every

Select one:

☐

a.

5 feet (1.5 m)

☐

b.

6 feet (1.8 m)

☐

c.

8 feet (2.4 m)

☐

d.

7 feet (2.1 m)

### Feedback

Your answer is incorrect.

Table 6.2

The correct answer is: 6 feet (1.8 m)

Question **281**

Not answered

Marked out of 1.00

Flag question

### Question text

The maximum length of a hose used to permanently connect an unvented appliance shall not exceed

Select one:

☐

a.

18 feet (5.5 m)

☐

b.

10 feet (3 m)

☐

c.

20 feet (6 m)

☐

d.

6 feet (1.8 m)

### Feedback

Your answer is incorrect.

6.20.3

The correct answer is: 10 feet (3 m)

Question **282**

Not answered

Marked out of 1.00

Flag question

### Question text

A construction heater may be connected to the gas supply with an approved hose providing its length does not exceed

Select one:

☐

a.

15 feet (4.6 m)

☐

b.

75 feet (30 m)

☐

c.

50 feet (15 m)

☐

d.

10 feet (3 m)

### Feedback

Your answer is incorrect.

6.20.3 (c)

The correct answer is: 75 feet (30 m)

Question **283**

Not answered

Marked out of 1.00

Flag question

### Question text

If the flow rate through a pipe is increased the pressure drop will

Select one:

☐

a.

Decrease

☐

b.

Be inversely proportional

☐

c.

Remain constant

☐

d.

Increase

### Feedback

Your answer is incorrect.

The correct answer is: Increase

Question **284**

Not answered

Marked out of 1.00

Flag question

Question text

When underground piping is located under a commercial driveway , it must be buried to a minimum depth of :

Select one:

☐

a.

18 inches

☐

b.

24 inches

☐

c.

12 inches

☐

d.

15 inches

Feedback

Your answer is incorrect.

6.15.4

The correct answer is: 24 inches

Question **285**

Not answered

Marked out of 1.00

Flag question

Question text

If malleable iron bushings are to be used in a gas piping system they must

Select one:

a.

Change at least two pipe sizes

b.

Be used only on the inlet of the pressure regulator

c.

Be of eccentric design

d.

Be used when a change of only one pipe size is required

### Feedback

Your answer is incorrect.

6.9.10

The correct answer is: Change at least two pipe sizes

Question **286**

Not answered

Marked out of 1.00

Flag question

### Question text

What is the maximum horizontal spacing of support required for 3/4 inch O.D. copper tubing ?

Select one:

a.

15 feet (5 m)

☐

b.

10 feet (3 m)

☐

c.

6 feet (2 m)

☐

d.

8 feet (2.5 m)

### Feedback

Your answer is incorrect.

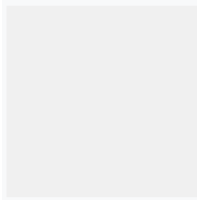

### Table 6.2

The correct answer is: 6 feet (2 m)

### Question **287**

Not answered

Marked out of 1.00

Flag question

### Question text

Tubing used on 2 PSIG gas in a single family dwelling shall be identified by a band of yellow paint or tape at intervals not exceeding

Select one:

☐

a.

3 feet

☐

b.

10 feet

☐

c.

20 feet

☐

d.

6 feet

### Feedback

Your answer is incorrect.

6.17.3

The correct answer is: 6 feet

Question **288**

Not answered

Marked out of 1.00

Flag question

### Question text

When air , oxygen or the gases under pressure are used in connection with the gas supply \_\_\_\_\_ shall be provided as close as practicable to the point of interconnection

Select one:

☐

a.

Ball valves

☐

b.

A fire extinguisher

c.

Plug valves

d.

Check valves

### Feedback

Your answer is incorrect.

6.8.5

The correct answer is: Check valves

Question **289**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Furnace fan control contacts open when circulating air

Select one:

a.

None of the options are correct

b.

Cools down

c.

Warm up

d.

Stops flowing

### Feedback

Your answer is correct.

The correct answer is: Cools down

### Question **290**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

To decrease the input of a gas burner , you would

Select one:

a.

Reduce the manifold pressure

b.

Drill the existing orifice

c.

Turn down the adjusting screw of the regulator

d.

Reduce the primary air to the burner

### Feedback

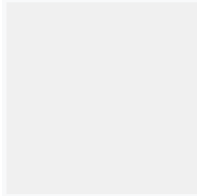

Your answer is correct.

The correct answer is: Reduce the manifold pressure

Question **291**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

On a previously correctly operating furnace , short cycling starts on a high limit set at 200 ° F (93 ° C). The most likely cause would be

Select one:

a.

Dirty air filters

b.

High limit set too low

c.

Undersized cold air return

d.

A short circuit in the high limit

Feedback

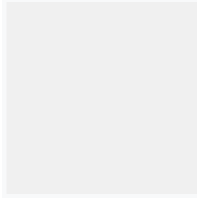

Your answer is incorrect.

The correct answer is: Dirty air filters

Question **292**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

A forced air furnace high limit control shuts off the

Select one:

☐

a.

Burner

☐

b.

Electricity

☐

c.

Compressor

☒

d.

Blower

### Feedback

Your answer is incorrect.

The correct answer is: Burner

Question **293**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

Referring to the above drawing , what is device 1 ?

Select one:

a.

Main power supply junction box

b.

Main blower fan motor

c.

Condensate trap

d.

Circulating air blower fan control box

### Feedback

Your answer is correct.

The correct answer is: Condensate trap

### Question **294**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

Troubleshooting Hot Surface Ignition (H S I) systems includes which of the following ?

Select one:

a.

Cleaning orifices

b.

Adjusting the pilot flame

c.

Measure current of igniter

d.

Setting the spark gap

### Feedback

Your answer is incorrect.

The correct answer is: Measure current of igniter

Question **295**

Correct

Mark 1.00 out of 1.00

Flag question

Question text

The diagram above shows what kind of instruments ?

Select one:

a.

Velometer indicating a velocity in Ft./min

b.

Manometer indicating absolute pressures

c.

Manometer indicating inches water column

d.

Pressure differential gauge showing atmospheric pressure

### Feedback

Your answer is correct.

The correct answer is: Manometer indicating inches water column

Question **296**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

Referring to the drawing above , what is device 8 ?

Select one:

a.

Main power supply for circulating air blower

b.

Integrated furnace control

c.

Auxiliary fan control

d.

Service power junction box

### Feedback

Your answer is incorrect.

The correct answer is: Integrated furnace control

Question **297**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

Which of the following causes the burner to run continuously ? A short in the

Select one:

a.

Fan switch

b.

High limit

c.

Thermostat wiring

d.

Stepdown transformer

### Feedback

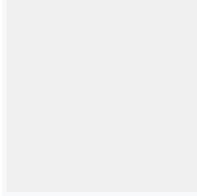

Your answer is correct.

The correct answer is: Thermostat wiring

Question **298**

Incorrect

Mark 0.00 out of 1.00

Flag question

Question text

A flame that is waving or rolling out when the air circulation fan on a furnace comes on may indicate

Select one:

a.

Too much primary air

b.

All of the options are correct

c.

An over-pressurized manifold

d.

A cracked heat exchanger

Feedback

Your answer is incorrect.

The correct answer is: A cracked heat exchanger

Question **299**

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

To check if a high limit aquastat will shut down the gas to the main burner , the gas fitter should

Select one:

☐

a.

Turn the operating limit to its lowest setting

☐

b.

Turn the burner on and set the high limit aquastat to its highest setting

☐

c.

Turn the burner on and set the high limit aquastat to its lowest setting

☒

d.

Make sure the circulating pump is running

### Feedback

Your answer is incorrect.

The correct answer is: Turn the burner on and set the high limit aquastat to its lowest setting

Question **300**

Correct

Mark 1.00 out of 1.00

Flag question

### Question text

A customer complains that the furnace air circulating fan cycles ON and OFF frequently but the burner remains ON until the thermostat is satisfied. The fault is more than likely

Select one:

☐

a.

Too low of a fan speed

☒

b.

Too high of a fan speed

☐

c.

An incorrect heat anticipator setting

☐

d.

Colder than normal weather

### Feedback

Your answer is correct.

The correct answer is: Too high of a fan speed

### Question 301

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

The normal set point of a domestic hot water tank thermostat would be

Select one:

☐

a.

160 ° F (71 ° C)

☐

b.

140 ° F (60 ° C)

☐

c.

100 ° F (38 ° C)

☒

d.

120 ° F (49 ° C)

### Feedback

Your answer is incorrect.

The correct answer is: 140 ° F (60 ° C)

### Question 302

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

During the heating cycle of a forced air furnace the burner cycles ON and OFF but the fan runs continuously. This could be caused by

Select one:

☒

a.

A fan speed that is set too low

☐

b.

All the options are correct

☐

c.

An incorrectly adjusted heat anticipator

☐

d.

An dirty air filter

### Feedback

Your answer is incorrect.

The correct answer is: All the options are correct

### Question 303

Incorrect

Mark 0.00 out of 1.00

Flag question

### Question text

An operating standing pilot type forced air furnace has a 24 volt control system. While checking out the control circuit, a jumper was placed across the gas valve coil. Which one of the following conditions will result ?

Select one:

☐

a.

The gas valve will not close

☒

b.

The gas valve coil will burn out

☐

c.

The secondary side of the transformer will burn out

d.

The thermostat heat anticipator will burn out

### Feedback

Your answer is incorrect.

The correct answer is: The thermostat heat anticipator will burn out

Question **304**

Not answered

Marked out of 1.00

Flag question

### Question text

When using non-metallic sheathed cable it shall be secured by straps
